

Contents

1	Introduction	01
2	The abiotic frame and adaptations to cope with abiotic constraints	07
	Introduction	07
	Staying afloat	08
	Turbulence	09
	Lake formation	11
	Temperature	14
	Light	24
	Abiotic factors affected by the catchment area	28
	Water colour	29
	Carbon	30
	pH	33
	Nutrients	36
	Oxygen	50
	Habitat permanence	58
	Practical experiments and observations	63
3	The organisms: the actors within the abiotic frame	66
	Introduction	66
	Viruses	69
	Prokaryotic organisms	70
	Eukaryotic organisms	71
	Protozoa	71
	Primary producers	73
	Metazoa—animals with differentiated cells	82
	Practical experiments and observations	106
4	Biotics: competition, herbivory, predation, parasitism, and symbiosis	107
	Introduction	107
	Competition	109

Predation and herbivory	125
Parasitism	154
Symbiosis	157
Practical experiments and observations	158
5 Food web interactions in freshwater ecosystems	163
Introduction	163
The evolution of an ecosystem approach	164
Cascading trophic interactions	166
Alternative stable states	179
Microbial components	183
Interaction strength in freshwater food chains	187
Succession	200
Impact of organisms on the abiotic frame	203
Practical experiments and observations	205
6 Biodiversity and environmental threats	207
Introduction	207
Biodiversity in lakes and ponds	209
Paleolimnology as a tool to understand history	220
Eutrophication	222
Acidification	227
Contamination	231
Global climate change	235
Solar ultraviolet radiation	236
Combined effects of environmental hazards	238
Exotic species	239
Global differentiation	248
Actions taken against environmental threats	250
