

Table of Content

Part I

Formulations and Numerical Methods 5

Computer Simulation of the Inverse Dynamics of Underactuated
Mechanical Systems 7

Velocity-Based Three-Dimensional Beam Using the Energy
Preserving Approach 19

Nullspace Method for the Analysis of Uniqueness of Reactions
and Driving Forces in Redundantly Constrained Multibody Systems..... 27

Experimental Investigation and Numerical Modeling
of Resultant-based Bending Plasticity in Cables..... 37

Condensed Stiffness Matrices for the Model Reduction
of Flexible Multibody Systems 47

Recursive Solution Procedures for Flexible Multibody
Systems: Comparing Condensation and Transfer Matrix Methods..... 57

A Method for Calculating and Continuing Static Solutions
for Flexible Multibody Systems 63

Stability Bounds For Step Size Ratios In Variable Time
Step Implementations Of Newmark Integrators..... 75

Efficient Methods and Real-Time Applications..... 85

Index-3 Divide And Conquer Algorithm For Efficient Multibody
Dynamics Simulations 87

In-Extensible ANCF Cable Element for Real-Time Simulations 99

Study on Model Order Reduction of Flexible Multibody Systems..... 105

Performance Aspects of Real-Time Capable Flexible Multibody Simulations 113

Parallelization methods 123

Elimination Method for Parallelization of Flexible Multibody
System Dynamics 125

Flexible Multibody Dynamics 139

Implementation of Shear Deformable Thin-Walled Beam Element
for Flexible Multibody Dynamics 141

Kinetic Aspects of Discrete Cosserat Rods..... 163

The Use of Modal Derivatives in Determining Stroke-Dependent
Frequencies of Large Stroke Flexure Hinges 177

FLEGX: Multibody Approach in Flexible Structure Design and Control 181

Approach for Modeling Flexible Bodies based on Experimental Data with Utilization in Elastic Multibody Simulation.....	189
Kinematic Calibration of a Six DOF Flexure-Based Parallel Manipulator.....	199
Comparison of Local and Global Approaches for Parametric Model Order Reduction for Systems with Distributed Moving Loads	213
Calibration of Mechatronic Flexible Joint.....	223
Modal Testing on Wind Turbines for Validation of a Flexible Multibody Model	231
A Generalised Fourier Method to Solve the Initial Boundary Value Problem for Free Vibrating Viscoelastic Beam Models	245
Multibody Dynamics of Gear Pairs: Comparison Among Different Models.....	255
Comparison of Model Order Reduction Techniques for Flexible Multibody Dynamics using an Equivalent Rigid-Link System Approach.....	269
Modelling and Simulation of Mechatronic Flexible Joint	281
Two Approaches of the Rigid Finite Element Method to Modelling the Flexibility of Spatial Linkage Links	287
Kinematic and Dynamic Behavior of Hyperelastic Plate with External Force via Absolute Nodal Coordinate Formulation	297
Contact Dynamics and Constraints	307
Selection and Experimental Validation of Contact / Impact Models Suitable for Multibody Dynamics Simulations	309
Efficient Evaluation of Local and Global Deformations in Impact Simulations in Reduced Flexible Multibody Systems based on a Quasi-Static Contact Submodel	315
Geometric Non-Linear Dynamics of Shell System with Large Amount of Contact Based on the Co-Rotational Formulation	327
Comparison of Two Versions of the LuGre Model Under Conditions of Varying Normal Force	335
Modeling Rigid Body Multi-point Contact-Impact Transition for Event-Based Simulation Schemes	345
Modelling of the Nuclear Fuel Assembly Components as a Flexible 1D Continua with Inner and Outer Impact Interactions.....	353
Numerical Prediction and Experimental Validation of a Three-Dimensional Rod-Plate Impact	359
Volumetric Contact Model of Ellipsoid-Plane Geometries	365
Gear Contact Model: Simulations and Measurement	375

Multibody Modelling of Friction Based Interaction between Turbine Blades	383
Multibody Dynamics of a Flexible Legged Robot with Wheeled Feet.....	397
Multiphysics and Coupled Problems	405
Dynamic Simulation of the Inflation Gas of a Tire Under Operational Conditions	407
Coupling a DEM Material Model to Multibody Construction Equipment	417
Damping Effect on Tall Building Low Frequency Vibration Using Two-Degree-of-Freedom Enhanced Coriolis Effect Damper	425
Investigation of Numerical Stability and Local Error for Continuous Co-Simulation Methods	435
Dynamic Analysis of a 3D Printer Based on the Delta Mechanism	443
Advance Modeling of Machine Tool Machining Process	453

Part II

Benchmark Problems	463
Computational Modelling of the Parallel Cable Mechanism with the Added Active Structure	465
Control and Optimization	473
Variational Multirate Integration in Discrete Mechanics and Optimal Control	475
Forward Sensitivity Analysis of the Index-3 Augmented Lagrangian Formulation with Projections	485
Position Control of Flexible Chain Using Wave Based Control	495
On Control of Robot Manipulators with Flexible Joints.....	501
Cloth-like Structures with Distributed Active Damping.....	511
Parameter Identification of a Torsional Vibration Damper in Frequency Domain Using Adjoint Fourier Coefficients.....	515
Design Optimization of Planetary Gear Trains Under Dynamic Constraints and Parameter Uncertainty	527
Software Development and Computer Technology.....	539
Synchronous Machine Electromechanical and Mechanical Analogy Model Comparison	541
Robotics	549
Cable Driven Spherical Mechanism Quadrosphere Enhanced by 3 DOF Piezo-actuated Platform	551
Robust Rest-to-Rest Motion Planning for Cranes Through a Variational Solution	559

Comparison of Distributed Model Predictive Control Approaches for Transporting a Load by a Formation of Mobile Robots	567
Increase of Stiffness in Physically Cooperating Robots	577
Kinematic Design of a Multiple Motion-type Parallel Manipulator based on the 3-RRS Mechanism	587
On Optimal Laws of Groups of Walking Robots Motion while Solving Formation Task	601
Modelling and Control Synthesis of Flexible Robot Arm Equipped with Additional Sensors	607
Development of Structure and Behavioral Model for Screw Driving In-pipe Inspection Robot based on Adaptive Mechanism on Legs.....	617
Adaptive Learning Control Algorithms for KUKA LWR 4+ Robots.....	627
Proportional-Derivative and Model-Based Controllers Used for a Serial Type Manipulator in Case of a Variable Mass Payload.....	635
Optimal Point to Point Trajectory Planning with Collision Avoidance for Dual Arm Setup	645
Coordinate-Free Decomposition of the Rigid Body Displacement: A Davenport Dual Angles Approach.....	655
Forward Kinematics Analysis of a Stewart Platform using Computer Vision Pose Estimation	665
Improved Calibration of Machine Tools by Redundant Measurement.....	671
Road Vehicle Dynamics and Railroad Vehicle Dynamics.....	677
A Soft Soil Contact Model with Adaptive Level of Detail for Predicting Off-Road Vehicle Mobility	679
Force Estimation on a McPherson Suspension by Means of a State Estimator and a Multibody Model.....	689
Optimal Control of the Tilting Modes Transition for a Narrow Track Vehicle through MBS Modelling	697
Inerter Potential for Vehicle Vertical Dynamics.....	707
Evaluation Criterion of Force Transfer through Mechanism.....	713
Numerical Investigation on the Dynamics of a High-Performance Motorcycle Equipped With an Innovative Hydro-Pneumatic Suspension System	719
A Variable Time-Step and Variable Penalty Method for the Index-3 Augmented Lagrangian Formulation with Velocity and Acceleration Projections.....	727
An Optimal Velocity Profile Design for 6 x 6 Unmanned Ground Vehicle Based on Real-time Traversability(RTT) Analysis.....	737
Experimental Model of a Vehicle with an Assistant for Reversing with a Trailer	745

Estimation of Commercial Vehicle Dynamics by Means of Real-Time Application in Condition of High Speed Curvilinear Maneuvers.....	749
Linearized Modal Analysis of Vehicle Powertrains.....	755
Cable Dynamics and Fatigue Analysis for Digital Mock-Up in Vehicle Industry	763
Use of Joint Coordinates and Homogenous Transformations for Modelling of Articulated Vehicle Dynamics	771
Tilting Child Safety Seat for Reducing the Lateral Acceleration Acting on Children when Vehicle Cornering	779
Biomechanics	785
Influence of the Side Branches of the Human Vocal Tract on the Voice Quality	787
Validating Subject Multibody Dynamics Estimated Action with Measured sEMG at Lower Limb Muscles on Different Gait Modes.....	795
Multibody Biomechanical Analysis of Taekwondo Athletes.....	799
Modelling of Real Car-to-Pedestrian Accident: Comparison of Various Approaches in the Car Bonnet Modelling.....	805
Optimal Control of a Biomechanical Multibody Model for the Dynamic Simulation of Working Tasks	817
Development of a Tool for the Sensitivity Analysis of Design Parameters of Femoral Implants in the Human Body During Gait.....	827
Optimization Methods for Identifying Muscle Forces in a Spinal-Cord-Injured Subject during Crutch-Assisted Gait.....	833
Identification of Knee Ligament Properties by Multibody Optimisation.....	841
Human like Motion Generation for Ergonomic Assessment - a Muscle Driven Digital Human Model using Muscle Synergies	847
Kinematic Validation Of A Human Thumb Model	857
Helicopter Collective Bounce Proneness: Which are the Good, the Bad (and the Ugly!) Pilot Biometrics?	867
Aerospace and Maritime Applications	879
Equivalent Mass-Spring Models of Multibody Spacecraft for the Application of Wave-based Control	881
Attitude Control of the Tether Space Mobility Device in Extending and Winding Tether	891
Modelling and Validation of a 3 MW Wind Turbine as a Basis for Structural Optimisation	901
