

CONTENT

INTRODUCTION	5
CHAPTER 1 OBJECT OF EQUILIBRIA STUDY	7
1.1. Standard State in Equilibria Study	7
1.2. Scheme of Potentiometric Equilibria Investigation	8
1.3. References	9
CHAPTER 2 POTENTIOMETRIC TITRATION TECHNIQUE	11
2.1. Titrant and Titrant Preparation	11
2.1.1. Carbonate-Free Hydroxide	12
2.1.2. Correction Function for CO ₂ Evolution of Carbonated Hydroxide	12
2.2. Apparatus	14
2.3. Cell	16
2.3.1. Glass Electrode Potential	17
2.3.2. Liquid-Junction Potential	19
2.3.3. Errors Effecting pH Measurements with the Glass Electrode	20
2.4. Electrode Calibration	20
2.4.1. Procedure of Glass Electrode Calibration	21
2.4.2. Glass Electrode Calibration by MAGEC Program Approach	23
2.4.3. Glass Electrode Calibration by Irving's Procedure	24
2.5. Procedure of Potentiometric Titration	25
2.6. Automatic Acquisition of Potentiometric Data	26
2.7. References	27
CHAPTER 3 EQUIVALENCE POINT IN POTENTIOMETRIC TITRATION	29
3.1. Linearization of Potentiometric Titration Curve	32
3.2. Equivalence Point Linear Least-Squares Regression Analysis	34
3.3. Equivalence Point by Nonlinear Regression Analysis	35
3.4. Illustrative Problems	36
Problem 3.1. Determination of Chloride Concentration via Potentiometric Precipitation Titration by Silver Nitrate and Silver-Silver Chloride Electrode	36
Problem 3.2. Determination of Acetic Acid Concentration via Potentiometric Titration by Sodium Hydroxide and Using Glass Electrode	37
Problem 3.3. Determination of Chloride Concentration by Argentometric Titration With the Use of TITRATE Program	39
3.5. References	44
CHAPTER 4 ANALYSIS OF POTENTIOMETRIC TITRATION DATA	45
4.1. Chemical Model by Equilibrium Titration Analysis	45
4.2. Total Analytical Concentrations	46

4.3. Potentiometric Determination of Free Concentrations m, l, h	47
4.4. Calculated Concentrations by Mass-Balance Equations	48
4.5. Minimized Residual-Square Sum Function	48
4.6. Parameters Estimated	50
4.7. Structure of Potentiometric Titration Program	52
4.8. Available Least-Squares Programs.	53
4.8.1. Program LETAGROP-ETITR	54
4.8.2. Version ETITR (1969)	55
4.8.3. Program POLET	56
4.8.4. Program SCOGS	58
4.8.5. Program MINQUAD	59
4.8.6. Program ACBA	60
4.8.7. Program DALSFKEK	61
4.8.8. Program PSEQUAD	62
4.8.9. Program MUCOMP	64
4.8.10. Program MINIPOT	66
4.8.11. Program MARFIT	67
4.8.12. Program TITFIT	68
4.8.13. Program PKAS	69
4.9. Illustrative Problems	70
Problem 4.1. Comparison of Determination of Dissociation Constants of HL, H_2L and H_3L Acids by Two Various Mathematical Approaches of Programs PKAS and MINQUAD	70
Problem 4.2. Determination of the Concentration and Protonation Constant of Weak Acid (Titrand) and Protonation Constant of Weak Base (Titrant) by ACBA Program	74
Problem 4.3. Determination of the Concentrations of Two Weak Bases (Titrand) in a Mixture by ACBA Program	76
Problem 4.4. Determination of 6 Particular and 4 Common Parameters of Potentiometric 333 Titration Curves in Two Steps Computation by MINIPOT Program	78
Problem 4.5. Determination of Particular and Common Parameters by Potentiometric Data Analysis of MUCOMP Program	79
Problem 4.6. Determination of Stability Constants of Suggested Chemical Model by SCOGS Program	82
Problem 4.7. Determination of Two Stability Constants of ML and MLH Complexes by MINQUAD Program while Protonation Constants of LH, LH_2, LH_3 LH_4 Being kept Fixed	84
Problem 4.8. Influence of Random Error on Simulated Data in Determination of Stability Constants of Two Hydrolytic Species by POLET and LETAGROP- Z+ETA Programs	87
Problem 4.9. Determination of Stability Constants of ML and LMH Complexes in $Mg^{2+} - HPO_4^{2-} - H^+$ System by LETAGROP-ETITR	91
Problem 4.10. Determination of Stability Constants of Polynuclear Complexes by Potentiometric Data Analysis of POLET Program	93
4.10. References	96
CHAPTER 5 CHEMICAL MODEL BUILDING BY EMF OR ABSORBANCE DATA ANALYSIS	98
5.1. Number of Species in Equilibrium Mixture	98
5.2. Stoichiometry of Complex Species	101
5.3. Determination of Stoichiometry Together with Stability Constants	102
5.4. Illustrative Problems	103
Problem 5.1. Determination of Dissociation Constants of Some Stoichiometric Coefficients of a Weak Acid by POLET (84) Program	103
Problem 5.2. Determination of Composition and Stability Constants of Polynuclear Hydrolytic Species by POLET (84) Program	105
Problem 5.3. Determination of the Number of Complexes by SPECIES Program and Their Average Stoichiometry by MESAK Program	107
Problem 5.4. Chemical Model Search in Hydrolysis Study of Dioxouranium (VI) in Ethanol-Water Solution	109

Problem 5.5. Influence of Random Error to Chemical Model Estimation in Tenside Solution	116
Problem 5.6. Determination of Chemical Model in Nickel(II)-Glycine — Aspartic Acid System by PSEQUAD Analysis of Potentiometric Data	121
Problem 5.7. Determination of Chemical Model of Cadmium(II)-PAR Complexes by Analysis of Solutions with an Excess of Coloured Ligand	131
Problem 5.8. Determination of Protonation Stability Constants of Bromocresol Green and Phenol Red in a Mixture by Absorbance-pH Matrix Analysis of SQUAD Program	136
5.5. References	141
