

TABLE OF CONTENTS

UNIT I

Introduction to Physiology: The Cell and General Physiology

CHAPTER 1

Functional Organization of the Human Body and Control of the "Internal Environment"	3
Cells as the Living Units of the Body	3
Extracellular Fluid—The "Internal Environment"	3
"Homeostatic" Mechanisms of the Major Functional Systems	4
Homeostasis	4
Extracellular Fluid Transport and Mixing System—The Blood Circulatory System	4
Origin of Nutrients in the Extracellular Fluid	5
Removal of Metabolic End Products	5
Regulation of Body Functions	5
Reproduction	6
Control Systems of the Body	6
Examples of Control Mechanisms	6
Characteristics of Control Systems	7
Summary—Automaticity of the Body	9

CHAPTER 2

The Cell and Its Functions	11
Organization of the Cell	11
Physical Structure of the Cell	12
Membranous Structures of the Cell	12
Cytoplasm and Its Organelles	14
Nucleus	17
Nuclear Membrane	17
Nucleoli and Formation of Ribosomes	18
Comparison of the Animal Cell with Precellular Forms of Life	18
Functional Systems of the Cell	19
Ingestion by the Cell—Endocytosis	19
Digestion of Pinocytotic and Phagocytic Foreign Substances Inside the Cell—Function of the Lysosomes	20
Synthesis and Formation of Cellular Structures by Endoplasmic Reticulum and Golgi Apparatus	20
Extraction of Energy from Nutrients—Function of the Mitochondria	22
Locomotion of Cells	24
Ameboid Movement	24
Cilia and Ciliary Movement	24

CHAPTER 3

Genetic Control of Protein Synthesis, Cell Function, and Cell Reproduction	27
Genes in the Cell Nucleus	27
Genetic Code	29

The DNA Code in the Cell Nucleus Is Transferred to an RNA Code in the Cell Cytoplasm—The Process of Transcription

Synthesis of RNA	30
Assembly of the RNA Chain from Activated Nucleotides Using the DNA Strand as a Template—The Process of "Transcription"	31
Messenger RNA—The Codons	31
Transfer RNA—The Anticodons	32
Ribosomal RNA	33
Formation of Proteins on the Ribosomes—The Process of "Translation"	33
Synthesis of Other Substances in the Cell	35
Control of Gene Function and Biochemical Activity in Cells	35
Genetic Regulation	35
Control of Intracellular Function by Enzyme Regulation	36
The DNA-Genetic System Also Controls Cell Reproduction	37
Cell Reproduction Begins with Replication of DNA	37
Chromosomes and Their Replication	38
Cell Mitosis	38
Control of Cell Growth and Cell Reproduction	39
Cell Differentiation	40
Apoptosis—Programmed Cell Death	40
Cancer	40

UNIT II

Membrane Physiology, Nerve, and Muscle

CHAPTER 4

Transport of Substances Through the Cell Membrane	45
The Lipid Barrier of the Cell Membrane, and Cell Membrane Transport Proteins	45
Diffusion	46
Diffusion Through the Cell Membrane	46
Diffusion Through Protein Channels, and "Gating" of These Channels	47
Facilitated Diffusion	49
Factors That Affect Net Rate of Diffusion	50
Osmosis Across Selectively Permeable Membranes—"Net Diffusion" of Water	51
"Active Transport" of Substances Through Membranes	52
Primary Active Transport	53
Secondary Active Transport—Co-Transport and Counter-Transport	54
Active Transport Through Cellular Sheets	55

CHAPTER 5

Membrane Potentials and Action Potentials

Basic Physics of Membrane Potentials	57
Membrane Potentials Caused by Diffusion	57
Measuring the Membrane Potential	58
Resting Membrane Potential of Nerves	59
Origin of the Normal Resting Membrane Potential	60
Nerve Action Potential	61
Voltage-Gated Sodium and Potassium Channels	62
Summary of the Events That Cause the Action Potential	64
Roles of Other Ions During the Action Potential	64
Initiation of the Action Potential	65
Propagation of the Action Potential	65
Re-establishing Sodium and Potassium Ionic Gradients After Action Potentials Are Completed—Importance of Energy Metabolism	66
Plateau in Some Action Potentials	66
Rhythmicity of Some Excitable Tissues—Repetitive Discharge	67
Special Characteristics of Signal Transmission in Nerve Trunks	68
Excitation—The Process of Eliciting the Action Potential	69
“Refractory Period” After an Action Potential	70
Recording Membrane Potentials and Action Potentials	70
Inhibition of Excitability—“Stabilizers” and Local Anesthetics	70

CHAPTER 6

Contraction of Skeletal Muscle

Physiologic Anatomy of Skeletal Muscle	72
Skeletal Muscle Fiber	72
General Mechanism of Muscle Contraction	74
Molecular Mechanism of Muscle Contraction	74
Molecular Characteristics of the Contractile Filaments	75
Effect of Amount of Actin and Myosin Filament Overlap on Tension Developed by the Contracting Muscle	77
Relation of Velocity of Contraction to Load	78
Energetics of Muscle Contraction	78
Work Output During Muscle Contraction	78
Sources of Energy for Muscle Contraction	79
Characteristics of Whole Muscle Contraction	80
Mechanics of Skeletal Muscle Contraction	81
Remodeling of Muscle to Match Function	82
Rigor Mortis	83

CHAPTER 7

Excitation of Skeletal Muscle:

Neuromuscular Transmission and Excitation-Contraction Coupling	85
Transmission of Impulses from Nerve Endings to Skeletal Muscle Fibers: The Neuromuscular Junction	85
Secretion of Acetylcholine by the Nerve Terminals	85
Molecular Biology of Acetylcholine Formation and Release	88
Drugs That Enhance or Block Transmission at the Neuromuscular Junction	88
Myasthenia Gravis	89
Muscle Action Potential	89
Spread of the Action Potential to the Interior of the Muscle Fiber by Way of “Transverse Tubules”	89
Excitation-Contraction Coupling	89
Transverse Tubule–Sarcoplasmic Reticulum System	89
Release of Calcium Ions by the Sarcoplasmic Reticulum	90

CHAPTER 8

Contraction and Excitation of Smooth Muscle

Contraction of Smooth Muscle	92
Types of Smooth Muscle	92
Contractile Mechanism in Smooth Muscle	93
Regulation of Contraction by Calcium Ions	95
Nervous and Hormonal Control of Smooth Muscle Contraction	95
Neuromuscular Junctions of Smooth Muscle	95
Membrane Potentials and Action Potentials in Smooth Muscle	96
Effect of Local Tissue Factors and Hormones to Cause Smooth Muscle Contraction Without Action Potentials	98
Source of Calcium Ions That Cause Contraction (1) Through the Cell Membrane and (2) from the Sarcoplasmic Reticulum	99

UNIT III

The Heart

CHAPTER 9

Heart Muscle; The Heart as a Pump and Function of the Heart Valves

Physiology of Cardiac Muscle	103
Physiologic Anatomy of Cardiac Muscle	103
Action Potentials in Cardiac Muscle	104
The Cardiac Cycle	106
Diastole and Systole	106
Relationship of the Electrocardiogram to the Cardiac Cycle	107
Function of the Atria as Primer Pumps	107
Function of the Ventricles as Pumps	108

Function of the Valves	109	Flow of Electrical Currents in the Chest	126
Aortic Pressure Curve	109	Around the Heart	127
Relationship of the Heart Sounds to Heart Pumping	109	Electrocardiographic Leads	127
Work Output of the Heart	110	Three Bipolar Limb Leads	127
Graphical Analysis of Ventricular Pumping	110	Chest Leads (Precordial Leads)	129
Chemical Energy Required for Cardiac Contraction: Oxygen Utilization by the Heart	111	Augmented Unipolar Limb Leads	129
Regulation of Heart Pumping	111		
Intrinsic Regulation of Heart Pumping—The Frank-Starling Mechanism	111	C H A P T E R 1 2	
Effect of Potassium and Calcium Ions on Heart Function	113	Electrocardiographic Interpretation of Cardiac Muscle and Coronary Blood Flow Abnormalities: Vectorial Analysis	131
Effect of Temperature on Heart Function	114	Principles of Vectorial Analysis of Electrocardiograms	131
Increasing the Arterial Pressure Load (up to a Limit) Does Not Decrease the Cardiac Output	114	Use of Vectors to Represent Electrical Potentials	131
		Direction of a Vector Is Denoted in Terms of Degrees	131
C H A P T E R 1 0		Axis for Each Standard Bipolar Lead and Each Unipolar Limb Lead	132
Rhythmical Excitation of the Heart	116	Vectorial Analysis of Potentials Recorded in Different Leads	133
Specialized Excitatory and Conductive System of the Heart	116	Vectorial Analysis of the Normal Electrocardiogram	134
Sinus (Sinoatrial) Node	116	Vectors That Occur at Successive Intervals During Depolarization of the Ventricles—The QRS Complex	134
Internodal Pathways and Transmission of the Cardiac Impulse Through the Atria	118	Electrocardiogram During Repolarization—The T Wave	134
Atrioventricular Node, and Delay of Impulse Conduction from the Atria to the Ventricles	118	Depolarization of the Atria—The P Wave	136
Rapid Transmission in the Ventricular Purkinje System	119	Vectorcardiogram	136
Transmission of the Cardiac Impulse in the Ventricular Muscle	119	Mean Electrical Axis of the Ventricular QRS—And Its Significance	137
Summary of the Spread of the Cardiac Impulse Through the Heart	120	Determining the Electrical Axis from Standard Lead Electrocardiograms	137
Control of Excitation and Conduction in the Heart	120	Abnormal Ventricular Conditions That Cause Axis Deviation	138
The Sinus Node as the Pacemaker of the Heart	120	Conditions That Cause Abnormal Voltages of the QRS Complex	140
Role of the Purkinje System in Causing Synchronous Contraction of the Ventricular Muscle	121	Increased Voltage in the Standard Bipolar Limb Leads	140
Control of Heart Rhythmicity and Impulse Conduction by the Cardiac Nerves: The Sympathetic and Parasympathetic Nerves	121	Decreased Voltage of the Electrocardiogram	140
		Prolonged and Bizarre Patterns of the QRS Complex	141
C H A P T E R 1 1		Prolonged QRS Complex as a Result of Cardiac Hypertrophy or Dilatation	141
The Normal Electrocardiogram	123	Prolonged QRS Complex Resulting from Purkinje System Blocks	141
Characteristics of the Normal Electrocardiogram	123	Conditions That Cause Bizarre QRS Complexes	141
Depolarization Waves Versus Repolarization Waves	123	Current of Injury	141
Relationship of Atrial and Ventricular Contraction to the Waves of the Electrocardiogram	125	Effect of Current of Injury on the QRS Complex	141
Voltage and Time Calibration of the Electrocardiogram	125	The J Point—The Zero Reference Potential for Analyzing Current of Injury	142
Methods for Recording Electrocardiograms	126	Coronary Ischemia as a Cause of Injury Potential	143
Pen Recorder	126	Abnormalities in the T Wave	145
Flow of Current Around the Heart During the Cardiac Cycle	126	Effect of Slow Conduction of the Depolarization Wave on the Characteristics of the T Wave	145
Recording Electrical Potentials from a Partially Depolarized Mass of Syncytial Cardiac Muscle	126	Shortened Depolarization in Portions of the Ventricular Muscle as a Cause of T Wave Abnormalities	145

CHAPTER 13

Cardiac Arrhythmias and Their Electrocardiographic Interpretation	147
Abnormal Sinus Rhythms	147
Tachycardia	147
Bradycardia	147
Sinus Arrhythmia	148
Abnormal Rhythms That Result from Block of Heart Signals Within the Intracardiac Conduction Pathways	148
Sinoatrial Block	148
Atrioventricular Block	148
Incomplete Atrioventricular Heart Block	149
Incomplete Intraventricular Block—Electrical Alternans	150
Premature Contractions	150
Premature Atrial Contractions	150
A-V Nodal or A-V Bundle Premature Contractions	150
Premature Ventricular Contractions	151
Paroxysmal Tachycardia	151
Atrial Paroxysmal Tachycardia	152
Ventricular Paroxysmal Tachycardia	152
Ventricular Fibrillation	152
Phenomenon of Re-entry—"Circus Movements" as the Basis for Ventricular Fibrillation	153
Chain Reaction Mechanism of Fibrillation	153
Electrocardiogram in Ventricular Fibrillation	154
Electroshock Defibrillation of the Ventricle	154
Hand Pumping of the Heart (Cardiopulmonary Resuscitation) as an Aid to Defibrillation	155
Atrial Fibrillation	155
Atrial Flutter	156
Cardiac Arrest	156

UNIT IV

The Circulation

CHAPTER 14

Overview of the Circulation; Medical Physics of Pressure, Flow, and Resistance	161
Physical Characteristics of the Circulation	161
Basic Theory of Circulatory Function	163
Interrelationships Among Pressure, Flow, and Resistance	164
Blood Flow	164
Blood Pressure	166
Resistance to Blood Flow	167
Effects of Pressure on Vascular Resistance and Tissue Blood Flow	170

CHAPTER 15

Vascular Distensibility and Functions of the Arterial and Venous Systems	171
Vascular Distensibility	171
Vascular Compliance (or Vascular Capacitance)	171

Volume-Pressure Curves of the Arterial and Venous Circulations	172
Arterial Pressure Pulsations	173
Transmission of Pressure Pulses to the Peripheral Arteries	174
Clinical Methods for Measuring Systolic and Diastolic Pressures	175
Veins and Their Functions	176
Venous Pressures—Right Atrial Pressure (Central Venous Pressure) and Peripheral Venous Pressures	176
Blood Reservoir Function of the Veins	179

CHAPTER 16

The Microcirculation and the Lymphatic System: Capillary Fluid Exchange, Interstitial Fluid, and Lymph Flow	181
Structure of the Microcirculation and Capillary System	181
Flow of Blood in the Capillaries—Vasomotion	182
Average Function of the Capillary System	183
Exchange of Water, Nutrients, and Other Substances Between the Blood and Interstitial Fluid	183
Diffusion Through the Capillary Membrane	183
The Interstitium and Interstitial Fluid	184
Fluid Filtration Across Capillaries Is Determined by Hydrostatic and Colloid Osmotic Pressures, and Capillary Filtration Coefficient	185
Capillary Hydrostatic Pressure	186
Interstitial Fluid Hydrostatic Pressure	187
Plasma Colloid Osmotic Pressure	188
Interstitial Fluid Colloid Osmotic Pressure	188
Exchange of Fluid Volume Through the Capillary Membrane	189
Starling Equilibrium for Capillary Exchange	189
Lymphatic System	190
Lymph Channels of the Body	190
Formation of Lymph	191
Rate of Lymph Flow	192
Role of the Lymphatic System in Controlling Interstitial Fluid Protein Concentration, Interstitial Fluid Volume, and Interstitial Fluid Pressure	193

CHAPTER 17

Local and Humoral Control of Blood Flow by the Tissues	195
Local Control of Blood Flow in Response to Tissue Needs	195
Mechanisms of Blood Flow Control	196
Acute Control of Local Blood Flow	196
Long-Term Blood Flow Regulation	200
Development of Collateral Circulation—A Phenomenon of Long-Term Local Blood Flow Regulation	201
Humoral Control of the Circulation	201
Vasoconstrictor Agents	201
Vasodilator Agents	202
Vascular Control by Ions and Other Chemical Factors	202

CHAPTER 18**Nervous Regulation of the Circulation, and Rapid Control of Arterial Pressure**

Nervous Regulation of the Circulation	204
Autonomic Nervous System	204
Role of the Nervous System in Rapid Control of Arterial Pressure	208
Increase in Arterial Pressure During Muscle Exercise and Other Types of Stress	208
Reflex Mechanisms for Maintaining Normal Arterial Pressure	209
Central Nervous System Ischemic Response—Control of Arterial Pressure by the Brain's Vasomotor Center in Response to Diminished Brain Blood Flow	212
Special Features of Nervous Control of Arterial Pressure	213
Role of the Skeletal Nerves and Skeletal Muscles in Increasing Cardiac Output and Arterial Pressure	213
Respiratory Waves in the Arterial Pressure	214
Arterial Pressure "Vasomotor" Waves—Oscillation of Pressure Reflex Control Systems	214

CHAPTER 19**Dominant Role of the Kidney in Long-Term Regulation of Arterial Pressure and in Hypertension: The Integrated System for Pressure Control**

Renal-Body Fluid System for Arterial Pressure Control	216
Quantitation of Pressure Diuresis as a Basis for Arterial Pressure Control	217
Chronic Hypertension (High Blood Pressure) Is Caused by Impaired Renal Fluid Excretion	220
The Renin-Angiotensin System: Its Role in Pressure Control and in Hypertension	223
Components of the Renin-Angiotensin System	223
Types of Hypertension in Which Angiotensin Is Involved: Hypertension Caused by a Renin-Secreting Tumor or by Infusion of Angiotensin II	226
Other Types of Hypertension Caused by Combinations of Volume Loading and Vasoconstriction	227
"Primary (Essential) Hypertension"	228
Summary of the Integrated, Multifaceted System for Arterial Pressure Regulation	230

CHAPTER 20**Cardiac Output, Venous Return, and Their Regulation**

Normal Values for Cardiac Output at Rest and During Activity	232
Control of Cardiac Output by Venous Return—Role of the Frank-Starling Mechanism of the Heart	232

Cardiac Output Regulation Is the Sum of Blood Flow Regulation in All the Local Tissues of the Body—Tissue Metabolism Regulates Most Local Blood Flow	233
The Heart Has Limits for the Cardiac Output That It Can Achieve	234
What Is the Role of the Nervous System in Controlling Cardiac Output?	235
Pathologically High and Pathologically Low Cardiac Outputs	236
High Cardiac Output Caused by Reduced Total Peripheral Resistance	236
Low Cardiac Output	237
A More Quantitative Analysis of Cardiac Output Regulation	237
Cardiac Output Curves Used in the Quantitative Analysis	237
Venous Return Curves	238
Analysis of Cardiac Output and Right Atrial Pressure, Using Simultaneous Cardiac Output and Venous Return Curves	241
Methods for Measuring Cardiac Output	243
Pulsatile Output of the Heart as Measured by an Electromagnetic or Ultrasonic Flowmeter	243
Measurement of Cardiac Output Using the Oxygen Fick Principle	244
Indicator Dilution Method for Measuring Cardiac Output	244

CHAPTER 21**Muscle Blood Flow and Cardiac Output During Exercise; the Coronary Circulation and Ischemic Heart Disease**

Blood Flow in Skeletal Muscle and Blood Flow Regulation During Exercise	246
Rate of Blood Flow Through the Muscles	246
Control of Blood Flow Through the Skeletal Muscles	247
Total Body Circulatory Readjustments During Exercise	247
Coronary Circulation	249
Physiologic Anatomy of the Coronary Blood Supply	249
Normal Coronary Blood Flow	249
Control of Coronary Blood Flow	250
Special Features of Cardiac Muscle Metabolism	251
Ischemic Heart Disease	252
Causes of Death After Acute Coronary Occlusion	253
Stages of Recovery from Acute Myocardial Infarction	254
Function of the Heart After Recovery from Myocardial Infarction	255
Pain in Coronary Heart Disease	255
Surgical Treatment of Coronary Disease	256

CHAPTER 22**Cardiac Failure**

Dynamics of the Circulation in Cardiac Failure	258
---	-----

Acute Effects of Moderate Cardiac Failure	258	Neurogenic Shock—Increased Vascular Capacity	285
Chronic Stage of Failure—Fluid Retention Helps to Compensate Cardiac Output	259	Anaphylactic Shock and Histamine Shock	285
Summary of the Changes That Occur After Acute Cardiac Failure—"Compensated Heart Failure"	260	Septic Shock	286
Dynamics of Severe Cardiac Failure—Decompensated Heart Failure	260	Physiology of Treatment in Shock	286
Unilateral Left Heart Failure	262	Replacement Therapy	286
Low-Output Cardiac Failure—Cardiogenic Shock	262	Treatment of Shock with Sympathomimetic Drugs—Sometimes Useful, Sometimes Not	287
Edema in Patients with Cardiac Failure	263	Other Therapy	287
Cardiac Reserve	264	Circulatory Arrest	287
Quantitative Graphical Method for Analysis of Cardiac Failure	265	Effect of Circulatory Arrest on the Brain	287
 C H A P T E R 2 3		 U N I T V	
Heart Valves and Heart Sounds; Dynamics of Valvular and Congenital Heart Defects	269	The Body Fluids and Kidneys	
Heart Sounds	269	 C H A P T E R 2 5	
Normal Heart Sounds	269	The Body Fluid Compartments: Extracellular and Intracellular Fluids; Interstitial Fluid and Edema	291
Valvular Lesions	271	Fluid Intake and Output Are Balanced During Steady-State Conditions	291
Abnormal Circulatory Dynamics in Valvular Heart Disease	272	Daily Intake of Water	291
Dynamics of the Circulation in Aortic Stenosis and Aortic Regurgitation	272	Daily Loss of Body Water	291
Dynamics of Mitral Stenosis and Mitral Regurgitation	273	Body Fluid Compartments	292
Circulatory Dynamics During Exercise in Patients with Valvular Lesions	273	Intracellular Fluid Compartment	293
Abnormal Circulatory Dynamics in Congenital Heart Defects	274	Extracellular Fluid Compartment	293
Patent Ductus Arteriosus—A Left-to-Right Shunt	274	Blood Volume	293
Tetralogy of Fallot—A Right-to-Left Shunt	274	Constituents of Extracellular and Intracellular Fluids	293
Causes of Congenital Anomalies	276	Ionic Composition of Plasma and Interstitial Fluid Is Similar	293
Use of Extracorporeal Circulation During Cardiac Surgery	276	Important Constituents of the Intracellular Fluid	295
Hypertrophy of the Heart in Valvular and Congenital Heart Disease	276	Measurement of Fluid Volumes in the Different Body Fluid Compartments—The Indicator-Dilution Principle	295
 C H A P T E R 2 4		Determination of Volumes of Specific Body Fluid Compartments	295
Circulatory Shock and Physiology of Its Treatment	278	Regulation of Fluid Exchange and Osmotic Equilibrium Between Intracellular and Extracellular Fluid	296
Physiologic Causes of Shock	278	Basic Principles of Osmosis and Osmotic Pressure	296
Circulatory Shock Caused by Decreased Cardiac Output	278	Osmotic Equilibrium Is Maintained Between Intracellular and Extracellular Fluids	298
Circulatory Shock That Occurs Without Diminished Cardiac Output	278	Volume and Osmolality of Extracellular and Intracellular Fluids in Abnormal States	299
What Happens to the Arterial Pressure in Circulatory Shock?	279	Effect of Adding Saline Solution to the Extracellular Fluid	299
Tissue Deterioration Is the End Result of Circulatory Shock, Whatever the Cause	279	Glucose and Other Solutions Administered for Nutritive Purposes	301
Stages of Shock	279	Clinical Abnormalities of Fluid Volume Regulation: Hyponatremia and Hypernatremia	301
Shock Caused by Hypovolemia—Hemorrhagic Shock	279	Causes of Hyponatremia: Excess Water or Loss of Sodium	301
Relationship of Bleeding Volume to Cardiac Output and Arterial Pressure	279	Causes of Hypernatremia: Water Loss or Excess Sodium	302
Progressive and Nonprogressive Hemorrhagic Shock	280	Edema: Excess Fluid in the Tissues	302
Irreversible Shock	284	Intracellular Edema	302
Hypovolemic Shock Caused by Plasma Loss	284	Extracellular Edema	302
Hypovolemic Shock Caused by Trauma	285		

Summary of Causes of Extracellular Edema	303
Safety Factors That Normally Prevent Edema	304
Fluids in the "Potential Spaces" of the Body	305
 C H A P T E R 26	
Urine Formation by the Kidneys:	
I. Glomerular Filtration, Renal Blood Flow, and Their Control	307
Multiple Functions of the Kidneys in Homeostasis	307
Physiologic Anatomy of the Kidneys	308
General Organization of the Kidneys and Urinary Tract	308
Renal Blood Supply	309
The Nephron Is the Functional Unit of the Kidney	310
Micturition	311
Physiologic Anatomy and Nervous Connections of the Bladder	311
Transport of Urine from the Kidney Through the Ureters and into the Bladder	312
Innervation of the Bladder	312
Filling of the Bladder and Bladder Wall Tone; the Cystometrogram	312
Micturition Reflex	313
Facilitation or Inhibition of Micturition by the Brain	313
Abnormalities of Micturition	313
Urine Formation Results from Glomerular Filtration, Tubular Reabsorption, and Tubular Secretion	314
Filtration, Reabsorption, and Secretion of Different Substances	315
Glomerular Filtration—The First Step in Urine Formation	316
Composition of the Glomerular Filtrate	316
GFR Is About 20 Per Cent of the Renal Plasma Flow	316
Glomerular Capillary Membrane	316
Determinants of the GFR	317
Increased Glomerular Capillary Filtration Coefficient Increases GFR	318
Increased Bowman's Capsule Hydrostatic Pressure Decreases GFR	318
Increased Glomerular Capillary Colloid Osmotic Pressure Decreases GFR	318
Increased Glomerular Capillary Hydrostatic Pressure Increases GFR	319
Renal Blood Flow	320
Renal Blood Flow and Oxygen Consumption	320
Determinants of Renal Blood Flow	320
Blood Flow in the Vasa Recta of the Renal Medulla Is Very Low Compared with Flow in the Renal Cortex	321
Physiologic Control of Glomerular Filtration and Renal Blood Flow	321
Sympathetic Nervous System Activation Decreases GFR	321
Hormonal and Autacoid Control of Renal Circulation	322
Autoregulation of GFR and Renal Blood Flow	323

Importance of GFR Autoregulation in Preventing Extreme Changes in Renal Excretion	323
Role of Tubuloglomerular Feedback in Autoregulation of GFR	323
Myogenic Autoregulation of Renal Blood Flow and GFR	325
Other Factors That Increase Renal Blood Flow and GFR: High Protein Intake and Increased Blood Glucose	325

 C H A P T E R 27	
Urine Formation by the Kidneys:	
II. Tubular Processing of the Glomerular Filtrate	327
Reabsorption and Secretion by the Renal Tubules	327
Tubular Reabsorption Is Selective and Quantitatively Large	327
Tubular Reabsorption Includes Passive and Active Mechanisms	328
Active Transport	328
Passive Water Reabsorption by Osmosis Is Coupled Mainly to Sodium Reabsorption	332
Reabsorption of Chloride, Urea, and Other Solutes by Passive Diffusion	332
Reabsorption and Secretion Along Different Parts of the Nephron	333
Proximal Tubular Reabsorption	333
Solute and Water Transport in the Loop of Henle	334
Distal Tubule	336
Late Distal Tubule and Cortical Collecting Tubule	336
Medullary Collecting Duct	337
Summary of Concentrations of Different Solutes in the Different Tubular Segments	338
Regulation of Tubular Reabsorption	339
Glomerulotubular Balance—The Ability of the Tubules to Increase Reabsorption Rate in Response to Increased Tubular Load	339
Peritubular Capillary and Renal Interstitial Fluid Physical Forces	339
Effect of Arterial Pressure on Urine Output—The Pressure-Natriuresis and Pressure-Diuresis Mechanisms	341
Hormonal Control of Tubular Reabsorption	342
Sympathetic Nervous System Activation Increases Sodium Reabsorption	343
Use of Clearance Methods to Quantify Kidney Function	343
Inulin Clearance Can Be Used to Estimate GFR	344
Creatine Clearance and Plasma Creatinine Clearance Can Be Used to Estimate GFR	344
PAH Clearance Can Be Used to Estimate Renal Plasma Flow	345
Filtration Fraction Is Calculated from GFR Divided by Renal Plasma Flow	346
Calculation of Tubular Reabsorption or Secretion from Renal Clearance	346

CHAPTER 28

Regulation of Extracellular Fluid Osmolarity and Sodium Concentration

The Kidneys Excrete Excess Water by Forming a Dilute Urine	348
Antidiuretic Hormone Controls Urine Concentration	348
Renal Mechanisms for Excreting a Dilute Urine	349
The Kidneys Conserve Water by Excreting a Concentrated Urine	350
Obligatory Urine Volume	350
Requirements for Excreting a Concentrated Urine—High ADH Levels and Hyperosmotic Renal Medulla	350
Countercurrent Mechanism Produces a Hyperosmotic Renal Medullary Interstitium	351
Role of Distal Tubule and Collecting Ducts in Excreting a Concentrated Urine	352
Urea Contributes to Hyperosmotic Renal Medullary Interstitium and to a Concentrated Urine	353
Countercurrent Exchange in the Vasa Recta Preserves Hyperosmolarity of the Renal Medulla	354
Summary of Urine Concentrating Mechanism and Changes in Osmolarity in Different Segments of the Tubules	355
Quantifying Renal Urine Concentration and Dilution: "Free Water" and Osmolar Clearances	357
Disorders of Urinary Concentrating Ability	357
Control of Extracellular Fluid Osmolarity and Sodium Concentration	358
Estimating Plasma Osmolarity from Plasma Sodium Concentration	358
Osmoreceptor-ADH Feedback System	358
ADH Synthesis in Supraoptic and Paraventricular Nuclei of the Hypothalamus and ADH Release from the Posterior Pituitary	359
Cardiovascular Reflex Stimulation of ADH Release by Decreased Arterial Pressure and/or Decreased Blood Volume	360
Quantitative Importance of Cardiovascular Reflexes and Osmolarity in Stimulating ADH Secretion	360
Other Stimuli for ADH Secretion	360
Role of Thirst in Controlling Extracellular Fluid Osmolarity and Sodium Concentration	361
Central Nervous System Centers for Thirst	361
Stimuli for Thirst	361
Threshold for Osmolar Stimulus of Drinking	362
Integrated Responses of Osmoreceptor-ADH and Thirst Mechanisms in Controlling Extracellular Fluid Osmolarity and Sodium Concentration	362
Role of Angiotensin II and Aldosterone in Controlling Extracellular Fluid Osmolarity and Sodium Concentration	362
Salt-Appetite Mechanism for Controlling Extracellular Fluid Sodium Concentration and Volume	363

CHAPTER 29

Renal Regulation of Potassium, Calcium, Phosphate, and Magnesium; Integration of Renal Mechanisms for Control of Blood Volume and Extracellular Fluid Volume

Regulation of Potassium Excretion and Potassium Concentration in Extracellular Fluid	365
Regulation of Internal Potassium Distribution	366
Overview of Renal Potassium Excretion	367
Potassium Secretion by Principal Cells of Late Distal and Cortical Collecting Tubules	367
Summary of Factors That Regulate Potassium Secretion: Plasma Potassium Concentration, Aldosterone, Tubular Flow Rate, and Hydrogen Ion Concentration	368
Control of Renal Calcium Excretion and Extracellular Calcium Ion Concentration	371
Control of Calcium Excretion by the Kidneys	372
Regulation of Renal Phosphate Excretion	372
Control of Renal Magnesium Excretion and Extracellular Magnesium Ion Concentration	373
Integration of Renal Mechanisms for Control of Extracellular Fluid	373
Sodium Excretion Is Precisely Matched to Intake Under Steady-State Conditions	373
Sodium Excretion Is Controlled by Altering Glomerular Filtration or Tubular Sodium Reabsorption Rates	374
Importance of Pressure Natriuresis and Pressure Diuresis in Maintaining Body Sodium and Fluid Balance	374
Pressure Natriuresis and Diuresis Are Key Components of a Renal-Body Fluid Feedback for Regulating Body Fluid Volumes and Arterial Pressure	375
Precision of Blood Volume and Extracellular Fluid Volume Regulation	376
Distribution of Extracellular Fluid Between the Interstitial Spaces and Vascular System	376
Nervous and Hormonal Factors Increase the Effectiveness of Renal-Body Fluid Feedback Control	377
Sympathetic Nervous System Control of Renal Excretion: Arterial Baroreceptor and Low-Pressure Stretch Receptor Reflexes	377
Role of Angiotensin II in Controlling Renal Excretion	377
Role of Aldosterone in Controlling Renal Excretion	378
Role of ADH in Controlling Renal Water Excretion	379
Role of Atrial Natriuretic Peptide in Controlling Renal Excretion	378
Integrated Responses to Changes in Sodium Intake	380
Conditions That Cause Large Increases in Blood Volume and Extracellular Fluid Volume	380

Increased Blood Volume and Extracellular Fluid Volume Caused by Heart Diseases	380	Renal Correction of Acidosis—Increased Excretion of Hydrogen Ions and Addition of Bicarbonate Ions to the Extracellular Fluid	396
Increased Blood Volume Caused by Increased Capacity of Circulation	380	Acidosis Decreases the Ratio of $\text{HCO}_3^-/\text{H}^+$ in Renal Tubular Fluid	396
Conditions That Cause Large Increases in Extracellular Fluid Volume but with Normal Blood Volume	381	Renal Correction of Alkalosis—Decreased Tubular Secretion of Hydrogen Ions and Increased Excretion of Bicarbonate Ions	396
Nephrotic Syndrome—Loss of Plasma Proteins in Urine and Sodium Retention by the Kidneys	381	Alkalosis Increases the Ratio of $\text{HCO}_3^-/\text{H}^+$ in Renal Tubular Fluid	396
Liver Cirrhosis—Decreased Synthesis of Plasma Proteins by the Liver and Sodium Retention by the Kidneys	381	Clinical Causes of Acid-Base Disorders	397
		Respiratory Acidosis Is Caused by Decreased Ventilation and Increased PCO_2	397
		Respiratory Alkalosis Results from Increased Ventilation and Decreased PCO_2	397
		Metabolic Acidosis Results from Decreased Extracellular Fluid Bicarbonate Concentration	397
		Treatment of Acidosis or Alkalosis	398
		Clinical Measurements and Analysis of Acid-Base Disorders	398
		Complex Acid-Base Disorders and Use of the Acid-Base Nomogram for Diagnosis	399
		Use of Anion Gap to Diagnose Acid-Base Disorders	400
CHAPTER 30		CHAPTER 31	
Regulation of Acid-Base Balance	383	Kidney Diseases and Diuretics	402
Hydrogen Ion Concentration Is Precisely Regulated	383	Diuretics and Their Mechanisms of Action	402
Acids and Bases—Their Definitions and Meanings	383	Osmotic Diuretics Decrease Water Reabsorption by Increasing Osmotic Pressure of Tubular Fluid	402
Defenses Against Changes in Hydrogen Ion Concentration: Buffers, Lungs, and Kidneys	384	“Loop” Diuretics Decrease Active Sodium-Chloride-Potassium Reabsorption in the Thick Ascending Loop of Henle	403
Buffering of Hydrogen Ions in the Body Fluids	385	Thiazide Diuretics Inhibit Sodium-Chloride Reabsorption in the Early Distal Tubule	404
Bicarbonate Buffer System	385	Carbonic Anhydrase Inhibitors Block Sodium-Bicarbonate Reabsorption in the Proximal Tubules	404
Quantitative Dynamics of the Bicarbonate Buffer System	385	Competitive Inhibitors of Aldosterone Decrease Sodium Reabsorption from and Potassium Secretion into the Cortical Collecting Tubule	404
Phosphate Buffer System	387	Diuretics That Block Sodium Channels in the Collecting Tubules Decrease Sodium Reabsorption	404
Proteins: Important Intracellular Buffers	387	Kidney Diseases	404
Respiratory Regulation of Acid-Base Balance	388	Acute Renal Failure	404
Pulmonary Expiration of CO_2 Balances Metabolic Formation of CO_2	388	Prerenal Acute Renal Failure Caused by Decreased Blood Flow to the Kidney	405
Increasing Alveolar Ventilation Decreases Extracellular Fluid Hydrogen Ion Concentration and Raises pH	388	Intrarenal Acute Renal Failure Caused by Abnormalities within the Kidney	405
Increased Hydrogen Ion Concentration Stimulates Alveolar Ventilation	389	Postrenal Acute Renal Failure Caused by Abnormalities of the Lower Urinary Tract	406
Renal Control of Acid-Base Balance	390	Physiologic Effects of Acute Renal Failure	406
Secretion of Hydrogen Ions and Reabsorption of Bicarbonate Ions by the Renal Tubules	390	Chronic Renal Failure: An Irreversible Decrease in the Number of Functional Nephrons	406
Hydrogen Ions Are Secreted by Secondary Active Transport in the Early Tubular Segments	391	Vicious Circle of Chronic Renal Failure Leading to End-Stage Renal Disease	407
Filtered Bicarbonate Ions Are Reabsorbed by Interaction with Hydrogen Ions in the Tubules	391	Injury to the Renal Vasculature as a Cause of Chronic Renal Failure	408
Primary Active Secretion of Hydrogen Ions in the Intercalated Cells of Late Distal and Collecting Tubules	392		
Combination of Excess Hydrogen Ions with Phosphate and Ammonia Buffers in the Tubule—A Mechanism for Generating “New” Bicarbonate Ions	392		
Phosphate Buffer System Carries Excess Hydrogen Ions into the Urine and Generates New Bicarbonate	393		
Excretion of Excess Hydrogen Ions and Generation of New Bicarbonate by the Ammonia Buffer System	393		
Quantifying Renal Acid-Base Excretion	394		
Regulation of Renal Tubular Hydrogen Ion Secretion	395		

Injury to the Glomeruli as a Cause of Chronic Renal Failure—Glomerulonephritis	408
Injury to the Renal Interstitium as a Cause of Chronic Renal Failure—Pyelonephritis	409
Nephrotic Syndrome—Excretion of Protein in the Urine Because of Increased Glomerular Permeability	409
Nephron Function in Chronic Renal Failure	409
Effects of Renal Failure on the Body Fluids—Uremia	411
Hypertension and Kidney Disease	412
Specific Tubular Disorders	413
Treatment of Renal Failure by Dialysis with an Artificial Kidney	414

UNIT VI

Blood Cells, Immunity, and Blood Clotting

CHAPTER 32	
Red Blood Cells, Anemia, and Polycythemia	419
Red Blood Cells (Erythrocytes)	419
Production of Red Blood Cells	420
Formation of Hemoglobin	424
Iron Metabolism	425
Life Span and Destruction of Red Blood Cells	426
Anemias	426
Effects of Anemia on Function of the Circulatory System	427
Polycythemia	427
Effect of Polycythemia on Function of the Circulatory System	428

CHAPTER 33	
Resistance of the Body to Infection: I. Leukocytes, Granulocytes, the Monocyte-Macrophage System, and Inflammation	429
Leukocytes (White Blood Cells)	429
General Characteristics of Leukocytes	429
Genesis of the White Blood Cells	430
Life Span of the White Blood Cells	431
Neutrophils and Macrophages Defend Against Infections	431
Phagocytosis	431
Monocyte-Macrophage Cell System (Reticuloendothelial System)	432
Inflammation: Role of Neutrophils and Macrophages	434
Inflammation	434
Macrophage and Neutrophil Responses During Inflammation	434
Eosinophils	436
Basophils	436
Leukopenia	436
The Leukemias	437
Effects of Leukemia on the Body	437

CHAPTER 34	
Resistance of the Body to Infection: II. Immunity and Allergy	439
Innate Immunity	439
Acquired (Adaptive) Immunity	439
Basic Types of Acquired Immunity	440
Both Types of Acquired Immunity Are Initiated by Antigens	440
Lymphocytes Are Responsible for Acquired Immunity	440
Preprocessing of the T and B Lymphocytes	440
T Lymphocytes and B-Lymphocyte Antibodies React Highly Specifically Against Specific Antigens—Role of Lymphocyte Clones	442
Origin of the Many Clones of Lymphocytes	442
Specific Attributes of the B-Lymphocyte System—Humoral Immunity and the Antibodies	443
Special Attributes of the T-Lymphocyte System—Activated T Cells and Cell-Mediated Immunity	446
Several Types of T Cells and Their Different Functions	446
Tolerance of the Acquired Immunity System to One's Own Tissues—Role of Preprocessing in the Thymus and Bone Marrow	448
Immunization by Injection of Antigens	448
Passive Immunity	449
Allergy and Hypersensitivity	449
Allergy Caused by Activated T Cells: Delayed-Reaction Allergy	449
Allergies in the "Allergic" Person, Who Has Excess IgE Antibodies	449

CHAPTER 35	
Blood Types; Transfusion; Tissue and Organ Transplantation	451
Antigenicity Causes Immune Reactions of Blood	451
O-A-B Blood Types	451
A and B Antigens—Agglutinogens	451
Agglutinins	452
Agglutination Process In Transfusion Reactions	452
Blood Typing	453
Rh Blood Types	453
Rh Immune Response	453
Transfusion Reactions Resulting from Mismatched Blood Types	454
Transplantation of Tissues and Organs	455
Attempts to Overcome Immune Reactions in Transplanted Tissue	455

CHAPTER 36	
Hemostasis and Blood Coagulation	457
Events in Hemostasis	457
Vascular Constriction	457
Formation of the Platelet Plug	457
Blood Coagulation in the Ruptured Vessel	458
Fibrous Organization or Dissolution of the Blood Clot	458

Mechanism of Blood Coagulation	459
Conversion of Prothrombin to Thrombin	459
Conversion of Fibrinogen to Fibrin—	
Formation of the Clot	460
Vicious Circle of Clot Formation	460
Initiation of Coagulation: Formation of	
Prothrombin Activator	461
Prevention of Blood Clotting in the	
Normal Vascular System—Intravascular	
Anticoagulants	463
Lysis of Blood Clots—Plasmin	464
Conditions That Cause Excessive	
Bleeding in Human Beings	464
Decreased Prothrombin, Factor VII,	
Factor IX, and Factor X Caused by	
Vitamin K Deficiency	464
Hemophilia	465
Thrombocytopenia	465
Thromboembolic Conditions in the	
Human Being	465
Femoral Venous Thrombosis and Massive	
Pulmonary Embolism	466
Disseminated Intravascular Coagulation	466
Anticoagulants for Clinical Use	466
Heparin as an Intravenous Anticoagulant	466
Coumarins as Anticoagulants	466
Prevention of Blood Coagulation Outside	
the Body	466
Blood Coagulation Tests	467
Bleeding Time	467
Clotting Time	467
Prothrombin Time	467

UNIT VII

Respiration

CHAPTER 37

Pulmonary Ventilation	471
Mechanics of Pulmonary Ventilation	471
Muscles That Cause Lung Expansion and	
Contraction	471
Movement of Air In and Out of the Lungs	
and the Pressures That Cause the	
Movement	472
Effect of the Thoracic Cage on Lung	
Expansibility	474
Pulmonary Volumes and Capacities	475
Recording Changes in Pulmonary Volume—	
Spirometry	475
Abbreviations and Symbols Used in	
Pulmonary Function Tests	476
Determination of Functional Residual	
Capacity, Residual Volume, and Total	
Lung Capacity—Helium Dilution Method	476
Minute Respiratory Volume Equals	
Respiratory Rate Times Tidal Volume	477
Alveolar Ventilation	477
“Dead Space” and Its Effect on Alveolar	
Ventilation	477
Rate of Alveolar Ventilation	478
Functions of the Respiratory	
Passageways	478
Trachea, Bronchi, and Bronchioles	478
Normal Respiratory Functions of the	
Nose	480

CHAPTER 38

Pulmonary Circulation, Pulmonary	
Edema, Pleural Fluid	483
Physiologic Anatomy of the Pulmonary	
Circulatory System	483
Pressures in the Pulmonary System	483
Blood Volume of the Lungs	484
Blood Flow Through the Lungs and	
Its Distribution	485
Effect of Hydrostatic Pressure	
Gradients in the Lungs on Regional	
Pulmonary Blood Flow	485
Zones 1, 2, and 3 of Pulmonary Blood Flow	485
Effect of Increased Cardiac Output on	
Pulmonary Blood Flow and Pulmonary	
Arterial Pressure During Heavy Exercise	486
Function of the Pulmonary Circulation	
When the Left Atrial Pressure Rises as a	
Result of Left-Sided Heart Failure	487
Pulmonary Capillary Dynamics	487
Capillary Exchange of Fluid in the Lungs,	
and Pulmonary Interstitial Fluid Dynamics	487
Pulmonary Edema	488
Fluid in the Pleural Cavity	489

CHAPTER 39

Physical Principles of Gas Exchange;	
Diffusion of Oxygen and Carbon	
Dioxide Through the Respiratory	
Membrane	491
Physics of Gas Diffusion and Gas	
Partial Pressures	491
Molecular Basis of Gas Diffusion	491
Gas Pressures in a Mixture of Gases—	
“Partial Pressures” of Individual Gases	491
Pressures of Gases Dissolved in Water	
and Tissues	492
Vapor Pressure of Water	492
Diffusion of Gases Through Fluids—	
Pressure Difference Causes Net	
Diffusion	493
Diffusion of Gases Through Tissues	493
Composition of Alveolar Air—Its Relation	
to Atmospheric Air	493
Rate at Which Alveolar Air Is Renewed by	
Atmospheric Air	494
Oxygen Concentration and Partial Pressure	
in the Alveoli	494
CO ₂ Concentration and Partial Pressure in	
the Alveoli	495
Expired Air	495
Diffusion of Gases Through the	
Respiratory Membrane	496
Factors That Affect the Rate of Gas	
Diffusion Through the Respiratory	
Membrane	498
Diffusing Capacity of the Respiratory	
Membrane	498
Effect of the Ventilation-Perfusion	
Ratio on Alveolar Gas Concentration	499
PO ₂ -PCO ₂ , VA/Q Diagram	500
Concept of the “Physiological Shunt”	
(When VA/Q Is Greater Than Normal)	500
Abnormalities of Ventilation-Perfusion Ratio	501

CHAPTER 40

Transport of Oxygen and Carbon Dioxide in Blood and Tissue Fluids 502**Transport of Oxygen from the Lungs to the Body Tissues** 502

Diffusion of Oxygen from the Alveoli to the Pulmonary Capillary Blood 502

Transport of Oxygen in the Arterial Blood 503

Diffusion of Oxygen from the Peripheral Capillaries into the Tissue Fluid 503

Diffusion of Oxygen from the Peripheral Capillaries to the Tissue Cells 504

Diffusion of Carbon Dioxide from the Peripheral Tissue Cells into the Capillaries and from the Pulmonary Capillaries into the Alveoli 504

Role of Hemoglobin in Oxygen Transport 505

Reversible Combination of Oxygen with Hemoglobin 505

Effect of Hemoglobin to "Buffer" the Tissue PO_2 507

Factors That Shift the Oxygen-Hemoglobin Dissociation Curve—Their Importance for Oxygen Transport 507

Metabolic Use of Oxygen by the Cells 508

Transport of Oxygen in the Dissolved State 509

Combination of Hemoglobin with Carbon Monoxide—Displacement of Oxygen 509

Transport of Carbon Dioxide in the Blood 510

Chemical Forms in Which Carbon Dioxide Is Transported 510

Carbon Dioxide Dissociation Curve 511

When Oxygen Binds with Hemoglobin, Carbon Dioxide Is Released (the Haldane Effect) to Increase CO_2 Transport 511

Change in Blood Acidity During Carbon Dioxide Transport 512

Respiratory Exchange Ratio 512

CHAPTER 41

Regulation of Respiration 514**Respiratory Center** 514

Dorsal Respiratory Group of Neurons—Its Control of Inspiration and of Respiratory Rhythm 514

A Pneumotaxic Center Limits the Duration of Inspiration and Increases the Respiratory Rate 514

Ventral Respiratory Group of Neurons—Functions in Both Inspiration and Expiration 515

Lung Inflation Signals Limit Inspiration—The Hering-Breuer Inflation Reflex 515

Control of Overall Respiratory Center Activity 516

Chemical Control of Respiration 516

Direct Chemical Control of Respiratory Center Activity by Carbon Dioxide and Hydrogen Ions 516

Peripheral Chemoreceptor System for Control of Respiratory Activity—Role of Oxygen in Respiratory Control 518Effect of Low Arterial PO_2 to Stimulate Alveolar Ventilation When Arterial Carbon Dioxide and Hydrogen Ion Concentrations Remain Normal 519

Chronic Breathing of Low Oxygen Stimulates Respiration Even More—The Phenomenon of "Acclimatization" 519

Composite Effects of PCO_2 , pH, and PO_2 on Alveolar Ventilation 519**Regulation of Respiration During Exercise** 520**Other Factors That Affect Respiration** 521

Sleep Apnea 522

CHAPTER 42

Respiratory Insufficiency—Pathophysiology, Diagnosis, Oxygen Therapy 524

Useful Methods for Studying Respiratory Abnormalities 524

Study of Blood Gases and Blood pH 524

Measurement of Maximum Expiratory Flow 525

Forced Expiratory Vital Capacity and Forced Expiratory Volume 526

Physiologic Peculiarities of Specific Pulmonary Abnormalities 526

Chronic Pulmonary Emphysema 526

Pneumonia 527

Atelectasis 528

Asthma 529

Tuberculosis 530

Hypoxia and Oxygen Therapy 530

Oxygen Therapy in Different Types of Hypoxia 530

Cyanosis 531

Hypercapnia 531

Dyspnea 532

Artificial Respiration 532

UNIT VIII

Aviation, Space, and Deep-Sea Diving Physiology

CHAPTER 43

Aviation, High-Altitude, and Space Physiology 537**Effects of Low Oxygen Pressure on the Body** 537Alveolar PO_2 at Different Elevations 537Effect of Breathing Pure Oxygen on Alveolar PO_2 at Different Altitudes 538

Acute Effects of Hypoxia 538

Acclimatization to Low PO_2 539

Natural Acclimatization of Native Human Beings Living at High Altitudes 540

Reduced Work Capacity at High Altitudes and Positive Effect of Acclimatization 540

Acute Mountain Sickness and High-Altitude Pulmonary Edema 540

Chronic Mountain Sickness 541

Effects of Acceleratory Forces on the Body in Aviation and Space Physiology 541

Centrifugal Acceleratory Forces 541

Effects of Linear Acceleratory Forces on the Body 542

"Artificial Climate" in the Sealed Spacecraft	543
Weightlessness in Space	543

C H A P T E R 4 4	
Physiology of Deep-Sea Diving and Other Hyperbaric Conditions	545
Effect of High Partial Pressures of Individual Gases on the Body	545
Nitrogen Narcosis at High Nitrogen Pressures	545
Oxygen Toxicity at High Pressures	546
Carbon Dioxide Toxicity at Great Depths in the Sea	547
Decompression of the Diver After Excess Exposure to High Pressure	547
Scuba (Self-Contained Underwater Breathing Apparatus) Diving	549
Special Physiologic Problems in Submarines	550
Hyperbaric Oxygen Therapy	550

U N I T I X

The Nervous System: A. General Principles and Sensory Physiology

C H A P T E R 4 5	
Organization of the Nervous System, Basic Functions of Synapses, "Transmitter Substances"	555
General Design of the Nervous System	555
Central Nervous System Neuron: The Basic Functional Unit	555
Sensory Part of the Nervous System— Sensory Receptors	555
Motor Part of the Nervous System— Effectors	556
Processing of Information—"Integrative" Function of the Nervous System	556
Storage of Information—Memory	557
Major Levels of Central Nervous System Function	557
Spinal Cord Level	557
Lower Brain or Subcortical Level	558
Higher Brain or Cortical Level	558
Comparison of the Nervous System with a Computer	558
Central Nervous System Synapses	559
Types of Synapses—Chemical and Electrical	559
Physiologic Anatomy of the Synapse	559
Chemical Substances That Function as Synaptic Transmitters	562
Electrical Events During Neuronal Excitation	564
Electrical Events During Neuronal Inhibition	566
Special Functions of Dendrites for Exciting Neurons	568
Relation of State of Excitation of the Neuron to Rate of Firing	569
Some Special Characteristics of Synaptic Transmission	570

C H A P T E R 4 6	
Sensory Receptors, Neuronal Circuits for Processing Information	572
Types of Sensory Receptors and the Sensory Stimuli They Detect	572
Differential Sensitivity of Receptors	572
Transduction of Sensory Stimuli into Nerve Impulses	573
Local Electrical Currents at Nerve Endings— Receptor Potentials	573
Adaptation of Receptors	575
Nerve Fibers That Transmit Different Types of Signals, and Their Physiologic Classification	576
Transmission of Signals of Different Intensity in Nerve Tracts—Spatial and Temporal Summation	577
Transmission and Processing of Signals in Neuronal Pools	578
Relaying of Signals Through Neuronal Pools	579
Prolongation of a Signal by a Neuronal Pool—"Afterdischarge"	581
Instability and Stability of Neuronal Circuits	583
Inhibitory Circuits as a Mechanism for Stabilizing Nervous System Function	583
Synaptic Fatigue as a Means for Stabilizing the Nervous System	583

C H A P T E R 4 7	
Somatic Sensations: I. General Organization, the Tactile and Position Senses	585
CLASSIFICATION OF SOMATIC SENSES	585
Detection and Transmission of Tactile Sensations	585
Detection of Vibration	587
TICKLE AND ITCH	587
Sensory Pathways for Transmitting Somatic Signals into the Central Nervous System	587
Dorsal Column—Medial Lemniscal System	588
Anterolateral System	588
Transmission in the Dorsal Column— Medial Lemniscal System	588
Anatomy of the Dorsal Column—Medial Lemniscal System	588
Somatosensory Cortex	589
Somatosensory Association Areas	592
Overall Characteristics of Signal Transmission and Analysis in the Dorsal Column—Medial Lemniscal System	592
Position Senses	594
Interpretation of Sensory Stimulus Intensity	593
Judgment of Stimulus Intensity	594
Position Senses	594
Transmission of Less Critical Sensory Signals in the Anterolateral Pathway	595
Anatomy of the Anterolateral Pathway	595
Some Special Aspects of Somatosensory Function	596
Function of the Thalamus in Somatic Sensation	596

Cortical Control of Sensory Sensitivity— “Corticofugal” Signals	597	Pupillary Diameter	618
Segmental Fields of Sensation—The Dermatomes	597	Errors of Refraction	619
CHAPTER 48		Visual Acuity	621
Somatic Sensations: II. Pain, Headache, and Thermal Sensations	598	Determination of Distance of an Object from the Eye—“Depth Perception”	621
Types of Pain and Their Qualities— Fast Pain and Slow Pain	598	Ophthalmoscope	622
Pain Receptors and Their Stimulation	598	Fluid System of the Eye—Intraocular Fluid	623
Rate of Tissue Damage as a Stimulus for Pain	599	Formation of Aqueous Humor by the Ciliary Body	623
Dual Pathways for Transmission of Pain Signals into the Central Nervous System	600	Outflow of Aqueous Humor from the Eye	623
Dual Pain Pathways in the Cord and Brain Stem—The Neospinothalamic Tract and the Paleospinothalamic Tract	600	Intraocular Pressure	624
Pain Suppression (“Analgesia”) System in the Brain and Spinal Cord	602	CHAPTER 50	
Brain’s Opiate System—Endorphins and Enkephalins	602	The Eye: II. Receptor and Neural Function of the Retina	626
Inhibition of Pain Transmission by Simultaneous Tactile Sensory Signals	603	Anatomy and Function of the Structural Elements of the Retina	626
Treatment of Pain by Electrical Stimulation	603	Photochemistry of Vision	628
Referred Pain	603	Rhodopsin-Retinal Visual Cycle, and Excitation of the Rods	629
Visceral Pain	603	Automatic Regulation of Retinal Sensitivity— Light and Dark Adaptation	631
Causes of True Visceral Pain	604	Color Vision	632
“Parietal Pain” Caused by Visceral Disease	604	Tricolor Mechanism of Color Detection	632
Localization of Visceral Pain—“Visceral” and the “Parietal” Pain Transmission Pathways	604	Color Blindness	633
Some Clinical Abnormalities of Pain and Other Somatic Sensations	605	Neural Function of the Retina	633
Hyperalgesia	605	Neural Circuitry of the Retina	633
Herpes Zoster (Shingles)	605	Ganglion Cells and Optic Nerve Fibers	636
Tic Douloureux	605	Excitation of the Ganglion Cells	637
Brown-Séquard Syndrome	606	CHAPTER 51	
Headache	606	The Eye: III. Central Neurophysiology of Vision	640
Headache of Intracranial Origin	606	Visual Pathways	640
Thermal Sensations	607	Function of the Dorsal Lateral Geniculate Nucleus of the Thalamus	640
Thermal Receptors and Their Excitation	607	Organization and Function of the Visual Cortex	641
Transmission of Thermal Signals in the Nervous System	609	Layered Structure of the Primary Visual Cortex	642
UNIT X		Two Major Pathways for Analysis of Visual Information—(1) The Fast “Position” and “Motion” Pathway; (2) The Accurate Color Pathway	643
The Nervous System: B. The Special Senses		Neuronal Patterns of Stimulation During Analysis of the Visual Image	643
CHAPTER 49		Detection of Color	644
The Eye: I. Optics of Vision	613	Effect of Removing the Primary Visual Cortex	644
Physical Principles of Optics	613	Fields of Vision; Perimetry	644
Refraction of Light	613	Eye Movements and Their Control	645
Application of Refractive Principles to Lenses	613	Fixation Movements of the Eyes	645
Focal Length of a Lens	615	“Fusion” of the Visual Images from the Two Eyes	647
Formation of an Image by a Convex Lens	616	Autonomic Control of Accommodation and Pupillary Aperture	648
Measurement of the Refractive Power of a Lens—“Diopter”	616	Control of Accommodation (Focusing the Eyes)	649
Optics of the Eye	617	Control of Pupillary Diameter	649
The Eye as a Camera	617	CHAPTER 52	
Mechanism of “Accommodation”	617	The Sense of Hearing	651
		Tympanic Membrane and the Ossicular System	651

Conduction of Sound from the Tympanic Membrane to the Cochlea	651
Transmission of Sound Through Bone	652
Cochlea	652
Functional Anatomy of the Cochlea	652
Transmission of Sound Waves in the Cochlea—"Traveling Wave"	654
Function of the Organ of Corti	655
Determination of Sound Frequency—The "Place" Principle	656
Determination of Loudness	656
Central Auditory Mechanisms	657
Auditory Nervous Pathways	657
Function of the Cerebral Cortex in Hearing	658
Determination of the Direction from Which Sound Comes	660
Centrifugal Signals from the Central Nervous System to Lower Auditory Centers	660
Hearing Abnormalities	660
Types of Deafness	660

CHAPTER 53

The Chemical Senses—Taste and Smell	663
Sense of Taste	663
Primary Sensations of Taste	663
Taste Bud and Its Function	664
Transmission of Taste Signals into the Central Nervous System	665
Taste Preference and Control of the Diet	666
Sense of Smell	667
Olfactory Membrane	667
Stimulation of the Olfactory Cells	667
Transmission of Smell Signals into the Central Nervous System	668

UNIT XI

The Nervous System: C. Motor and Integrative Neurophysiology

CHAPTER 54

Motor Functions of the Spinal Cord; the Cord Reflexes	673
Organization of the Spinal Cord for Motor Functions	673
Muscle Sensory Receptors—Muscle Spindles and Golgi Tendon Organs—And Their Roles in Muscle Control	675
Receptor Function of the Muscle Spindle	675
Muscle Stretch Reflex	676
Role of the Muscle Spindle in Voluntary Motor Activity	678
Clinical Applications of the Stretch Reflex	678
Golgi Tendon Reflex	679
Function of the Muscle Spindles and Golgi Tendon Organs in Conjunction with Motor Control from Higher Levels of the Brain	680
Flexor Reflex and the Withdrawal Reflexes	680
Crossed Extensor Reflex	681

Reciprocal Inhibition and Reciprocal Innervation	681
Reflexes of Posture and Locomotion	682
Postural and Locomotive Reflexes of the Cord	682
Scratch Reflex	683
Spinal Cord Reflexes That Cause Muscle Spasm	683
Autonomic Reflexes in the Spinal Cord	683
Spinal Cord Transection and Spinal Shock	684

CHAPTER 55

Cortical and Brain Stem Control of Motor Function	685
MOTOR CORTEX AND CORTICOSPINAL TRACT	685
Primary Motor Cortex	685
Premotor Area	686
Supplementary Motor Area	686
Some Specialized Areas of Motor Control Found in the Human Motor Cortex	686
Transmission of Signals from the Motor Cortex to the Muscles	687
Incoming Fiber Pathways to the Motor Cortex	688
Red Nucleus Serves as an Alternative Pathway for Transmitting Cortical Signals to the Spinal Cord	688
"Extrapyramidal" System	689
Excitation of the Spinal Cord Motor Control Areas by the Primary Motor Cortex and Red Nucleus	689
Role of the Brain Stem in Controlling Motor Function	691
Support of the Body Against Gravity—Roles of the Reticular and Vestibular Nuclei	691
Vestibular Sensations and Maintenance of Equilibrium	692
Vestibular Apparatus	692
Function of the Utricle and Saccule in the Maintenance of Static Equilibrium	694
Detection of Head Rotation by the Semicircular Ducts	695
Vestibular Mechanisms for Stabilizing the Eyes	696
Other Factors Concerned with Equilibrium	696
Functions of Brain Stem Nuclei in Controlling Subconscious, Stereotyped Movements	697

CHAPTER 56

Contributions of the Cerebellum and Basal Ganglia to Overall Motor Control	698
Cerebellum and Its Motor Functions	698
Anatomical Functional Areas of the Cerebellum	699
Neuronal Circuit of the Cerebellum	700
Function of the Cerebellum in Overall Motor Control	703
Clinical Abnormalities of the Cerebellum	706

Basal Ganglia—Their Motor Functions	707	Hypothalamus, a Major Control Headquarters for the Limbic System	732
Function of the Basal Ganglia in Executing Patterns of Motor Activity—The Putamen Circuit	708	Vegetative and Endocrine Control	733
Role of the Basal Ganglia for Cognitive Control of Sequences of Motor Patterns—The Caudate Circuit	709	Functions of the Hypothalamus	733
Function of the Basal Ganglia to Change the Timing and to Scale the Intensity of Movements	709	Behavioral Functions of the Hypothalamus and Associated Limbic Structures	734
Functions of Specific Neurotransmitter Substances in the Basal Ganglial System	710	“Reward” and “Punishment” Function of the Limbic System	735
Integration of the Many Parts of the Total Motor Control System	712	Importance of Reward or Punishment in Behavior	736
Spinal Level	712	Specific Functions of Other Parts of the Limbic System	736
Hindbrain Level	712	Functions of the Hippocampus	736
Motor Cortex Level	712	Functions of the Amygdala	737
What Drives Us to Action?	713	Function of the Limbic Cortex	738
 C H A P T E R 5 7		 C H A P T E R 5 9	
Cerebral Cortex, Intellectual Functions of the Brain, Learning and Memory	714	States of Brain Activity—Sleep, Brain Waves, Epilepsy, Psychoses	739
Physiologic Anatomy of the Cerebral Cortex	714	Sleep	739
Functions of Specific Cortical Areas	715	Slow-Wave Sleep	739
Association Areas	716	REM Sleep (Paradoxical Sleep, Desynchronized Sleep)	740
Comprehensive Interpretative Function of the Posterior Superior Temporal Lobe—“Wernicke’s Area” (a General Interpretative Area)	718	Basic Theories of Sleep	740
Functions of the Parieto-occipitotemporal Cortex in the Nondominant Hemisphere	719	Physiologic Effects of Sleep	741
Higher Intellectual Functions of the Prefrontal Association Areas	719	Brain Waves	741
Function of the Brain in Communication—Language Input and Language Output	720	Origin of Brain Waves	742
Function of the Corpus Callosum and Anterior Commissure to Transfer Thoughts, Memories, Training, and Other Information Between the Two Cerebral Hemispheres	722	Effect of Varying Levels of Cerebral Activity on the Frequency of the EEG	743
Thoughts, Consciousness, and Memory	723	Changes in the EEG at Different Stages of Wakefulness and Sleep	743
Memory—Roles of Synaptic Facilitation and Synaptic Inhibition	723	Epilepsy	743
Short-Term Memory	724	Grand Mal Epilepsy	743
Intermediate Long-Term Memory	724	Petit Mal Epilepsy	744
Long-Term Memory	725	Focal Epilepsy	744
Consolidation of Memory	725	Psychotic Behavior and Dementia—Roles of Specific Neurotransmitter Systems	745
 C H A P T E R 5 8		Depression and Manic-Depressive Psychoses—Decreased Activity of the Norepinephrine and Serotonin Neurotransmitter Systems	745
Behavioral and Motivational Mechanisms of the Brain—The Limbic System and the Hypothalamus	728	Schizophrenia—Possible Exaggerated Function of Part of the Dopamine System	745
Activating-Driving Systems of the Brain	728	Alzheimer’s Disease—Amyloid Plaques and Depressed Memory	746
Control of Cerebral Activity by Continuous Excitatory Signals from the Brain Stem	728	 C H A P T E R 6 0	
Neurohormonal Control of Brain Activity	730	The Autonomic Nervous System and the Adrenal Medulla	748
Limbic System	731	General Organization of the Autonomic Nervous System	748
Functional Anatomy of the Limbic System; Key Position of the Hypothalamus	731	Physiologic Anatomy of the Sympathetic Nervous System	748
		Preganglionic and Postganglionic Sympathetic Neurons	748
		Physiologic Anatomy of the Parasympathetic Nervous System	750
		Basic Characteristics of Sympathetic and Parasympathetic Function	750
		Cholinergic and Adrenergic Fibers—Secretion of Acetylcholine or Norepinephrine	750
		Receptors on the Effector Organs	752

Excitatory and Inhibitory Actions of Sympathetic and Parasympathetic Stimulation	753	Physiological Anatomy of the Gastrointestinal Wall	771
Effects of Sympathetic and Parasympathetic Stimulation on Specific Organs	753	Neural Control of Gastrointestinal Function—Enteric Nervous System	773
Function of the Adrenal Medullae	755	Differences Between the Myenteric and Submucosal Plexuses	774
Relation of Stimulus Rate to Degree of Sympathetic and Parasympathetic Effect	756	Types of Neurotransmitters Secreted by Enteric Neurons	775
Sympathetic and Parasympathetic “Tone”	756	Hormonal Control of Gastrointestinal Motility	776
Denervation Supersensitivity of Sympathetic and Parasympathetic Organs after Denervation	756	Functional Types of Movements in the Gastrointestinal Tract	776
Autonomic Reflexes	757	Propulsive Movements—Peristalsis	776
Stimulation of Discrete Organs in Some Instances and Mass Stimulation in Other Instances by the Sympathetic and Parasympathetic Systems	757	Mixing Movements	777
“Alarm” or “Stress” Response of the Sympathetic Nervous System	758	Gastrointestinal Blood Flow—“Splanchnic Circulation”	777
Medullary, Pontine, and Mesencephalic Control of the Autonomic Nervous System	758	Anatomy of the Gastrointestinal Blood Supply	778
Pharmacology of the Autonomic Nervous System	759	Effect of Gut Activity and Metabolic Factors on Gastrointestinal Blood Flow	778
Drugs That Act on Adrenergic Effector Organs—Sympathomimetic Drugs	759	Nervous Control of Gastrointestinal Blood Flow	779
Drugs That Act on Cholinergic Effector Organs	759		
Drugs That Stimulate or Block Sympathetic and Parasympathetic Postganglionic Neurons	759		
C H A P T E R 6 1		C H A P T E R 6 3	
Cerebral Blood Flow, Cerebrospinal Fluid, and Brain Metabolism	761	Propulsion and Mixing of Food in the Alimentary Tract	781
Cerebral Blood Flow	761	Ingestion of Food	781
Normal Rate of Cerebral Blood Flow	761	Mastication (Chewing)	781
Regulation of Cerebral Blood Flow	761	Swallowing (Deglutition)	782
Cerebral Microcirculation	763	Motor Functions of the Stomach	784
Cerebral Stroke Occurs When Cerebral Blood Vessels are Blocked	763	Storage Function of the Stomach	784
Cerebrospinal Fluid System	763	Mixing and Propulsion Of Food in the Stomach—The Basic Electrical Rhythm of the Stomach Wall	784
Cushioning Function of the Cerebrospinal Fluid	763	Stomach Emptying	785
Formation, Flow, and Absorption of Cerebrospinal Fluid	764	Regulation of Stomach Emptying	785
Cerebrospinal Fluid Pressure	765	Movements of the Small Intestine	786
Obstruction to Flow of Cerebrospinal Fluid Can Cause Hydrocephalus	766	Mixing Contractions (Segmentation Contractions)	786
Blood–Cerebrospinal Fluid and Blood–Brain Barriers	766	Propulsive Movements	787
Brain Edema	766	Function of the Ileocecal Valve	788
Brain Metabolism	767	Movements of the Colon	788
		Defecation	789
		Other Autonomic Reflexes That Affect Bowel Activity	790
U N I T X I I			
Gastrointestinal Physiology		C H A P T E R 6 4	
C H A P T E R 6 2		Secretory Functions of the Alimentary Tract	791
General Principles of Gastrointestinal Function—Motility, Nervous Control, and Blood Circulation	771	General Principles of Alimentary Tract Secretion	791
General Principles of Gastrointestinal Motility	771	Anatomical Types of Glands	791
		Basic Mechanisms of Stimulation of the Alimentary Tract Glands	791
		Basic Mechanism of Secretion by Glandular Cells	791
		Lubricating and Protective Properties of Mucus, and Importance of Mucus in the Gastrointestinal Tract	793
		Secretion of Saliva	793
		Nervous Regulation of Salivary Secretion	794
		Esophageal Secretion	795

Gastric Secretion	794	Diarrhea	822
Characteristics of the Gastric Secretions	794	Paralysis of Defecation in Spinal Cord Injuries	823
Pyloric Glands—Secretion of Mucus and Gastrin	797	General Disorders of the Gastrointestinal Tract	823
Surface Mucous Cells	797	Vomiting	823
Stimulation of Gastric Acid Secretion	797	Nausea	824
Regulation of Pepsinogen Secretion	798	Gastrointestinal Obstruction	824
Inhibition of Gastric Secretion by Other Post-Stomach Intestinal Factors	798		
Chemical Composition of Gastrin And Other Gastrointestinal Hormones	799		
Pancreatic Secretion	799		
Pancreatic Digestive Enzymes	799		
Secretion of Bicarbonate Ions	800		
Regulation of Pancreatic Secretion	800		
Secretion of Bile by the Liver; Functions of the Biliary Tree	802		
Physiologic Anatomy of Biliary Secretion	802		
Function of Bile Salts in Fat Digestion and Absorption	804		
Liver Secretion of Cholesterol and Gallstone Formation	804		
Secretions of the Small Intestine	805		
Secretion of Mucus by Brunner's Glands in the Duodenum	805		
Secretion of Intestinal Digestive Juices by the Crypts of Lieberkühn	805		
Regulation of Small Intestine Secretion—Local Stimuli	806		
Secretions of the Large Intestine	806		
CHAPTER 65			
Digestion and Absorption in the Gastrointestinal Tract	808		
Digestion of the Various Foods by Hydrolysis	808		
Digestion of Carbohydrates	809		
Digestion of Proteins	810		
Digestion of Fats	811		
Basic Principles of Gastrointestinal Absorption	812		
Anatomical Basis of Absorption	812		
Absorption in the Small Intestine	813		
Absorption of Water	814		
Absorption of Ions	814		
Absorption of Nutrients	815		
Absorption in the Large Intestine: Formation of Feces	817		
CHAPTER 66			
Physiology of Gastrointestinal Disorders	819		
Disorders of Swallowing and of the Esophagus	819		
Disorders of the Stomach	819		
Peptic Ulcer	820		
Specific Causes of Peptic Ulcer in the Human Being	821		
Disorders of the Small Intestine	821		
Abnormal Digestion of Food in the Small Intestine—Pancreatic Failure	821		
Malabsorption by the Small Intestine Mucosa—Sprue	822		
Disorders of the Large Intestine	822		
Constipation	822		
		UNIT XIII	
		Metabolism and Temperature Regulation	
		CHAPTER 67	
		Metabolism of Carbohydrates, and Formation of Adenosine Triphosphate	829
		Release of Energy from Foods, and the Concept of "Free Energy"	829
		Role of Adenosine Triphosphate in Metabolism	829
		Central Role of Glucose in Carbohydrate Metabolism	830
		Transport of Glucose Through the Cell Membrane	831
		Insulin Increases Facilitated Diffusion of Glucose	831
		Phosphorylation of Glucose	831
		Glycogen Is Stored in Liver and Muscle	831
		Glycogenesis—The Process of Glycogen Formation	832
		Removal of Stored Glycogen—Glycogenolysis	832
		Release of Energy from the Glucose Molecule by the Glycolytic Pathway	832
		Summary of ATP Formation During the Breakdown of Glucose	836
		Control of Energy Release from Stored Glycogen When the Body Needs Additional Energy	836
		Anaerobic Release of Energy—"Anaerobic Glycolysis"	836
		Release of Energy from Glucose by the Pentose Phosphate Pathway	837
		Glucose Conversion to Glycogen or Fat	838
		Formation of Carbohydrates from Proteins and Fats—"Gluconeogenesis"	838
		Blood Glucose	839
		CHAPTER 68	
		Lipid Metabolism	840
		Transport of Lipids in the Body Fluids	840
		Transport of Triglycerides and Other Lipids from the Gastrointestinal Tract by Lymph—The Chylomicrons	840
		Removal of the Chylomicrons from the Blood	841
		"Free Fatty Acids" Are Transported in the Blood in Combination with Albumin	841

Lipoproteins—Their Special Function in Transporting Cholesterol and Phospholipids	841
Fat Deposits	842
Adipose Tissue	842
Liver Lipids	842
Use of Triglycerides for Energy:	
Formation of Adenosine Triphosphate	842
Formation of Acetoacetic Acid in the Liver and Its Transport in the Blood	844
Synthesis of Triglycerides from Carbohydrates	844
Synthesis of Triglycerides from Proteins	845
Regulation of Energy Release from Triglycerides	846
Obesity	846
Phospholipids and Cholesterol	846
Phospholipids	846
Cholesterol	847
Cellular Structural Functions of Phospholipids and Cholesterol—Especially for Membranes	848
Atherosclerosis	848
Basic Causes of Atherosclerosis—The Roles of Cholesterol and Lipoproteins	850
Other Major Risk Factors for Atherosclerosis	850
Prevention of Atherosclerosis	850

CHAPTER 69

Protein Metabolism	852
Basic Properties	852
Amino Acids	852
Transport and Storage of Amino Acids	854
Blood Amino Acids	854
Storage of Amino Acids as Proteins in the Cells	854
Functional Roles of the Plasma	
Proteins	855
Essential and Nonessential Amino Acids	855
Obligatory Degradation of Proteins	857
Hormonal Regulation of Protein Metabolism	857

CHAPTER 70

The Liver as an Organ	859
Physiologic Anatomy of the Liver	859
Hepatic Vascular and Lymph Systems	859
Blood Flows Through the Liver from the Portal Vein and Hepatic Artery	860
The Liver Functions as a Blood Reservoir	860
The Liver Has Very High Lymph Flow	860
Regulation of Liver Mass—Regeneration	860
Hepatic Macrophage System Serves a Blood-Cleansing Function	861
Metabolic Functions of the Liver	861
Carbohydrate Metabolism	861
Fat Metabolism	861
Protein Metabolism	862
Other Metabolic Functions of the Liver	862
Measurement of Bilirubin in the Bile as a Clinical Diagnostic Tool	862
Jaundice—Excess Bilirubin in the Extracellular Fluid	863

CHAPTER 71

Dietary Balances; Regulation of Feeding; Obesity and Starvation; Vitamins and Minerals	865
Energy Intake and Output Are Balanced Under Steady-State Conditions	865
Dietary Balances	865
Energy Available in Foods	865
Methods for Determining Metabolic Utilization of Proteins, Carbohydrates, and Fats	866
Regulation of Food Intake and Energy Storage	865
Neural Centers Regulate Food Intake	867
Factors That Regulate Quantity of Food Intake	870
Obesity	872
Decreased Physical Activity and Abnormal Feeding Regulation as Causes of Obesity	872
Treatment of Obesity	873
Inanition, Anorexia, and Cachexia	874
Starvation	874
Vitamins	875
Vitamin A	875
Thiamine (Vitamin B ₁)	875
Niacin	876
Riboflavin (Vitamin B ₂)	876
Vitamin B ₁₂	876
Folic Acid (Pteroylglutamic Acid)	877
Pyridoxine (Vitamin B ₆)	877
Pantothenic Acid	877
Ascorbic Acid (Vitamin C)	877
Vitamin D	878
Vitamin E	878
Vitamin K	878
Mineral Metabolism	878

CHAPTER 72

Energetics and Metabolic Rate	881
Adenosine Triphosphate (ATP)	
Functions as an “Energy Currency” in Metabolism	881
Phosphocreatine Functions as an Accessory Storage Depot for Energy and as an “ATP Buffer”	882
Anaerobic Versus Aerobic Energy	882
Summary of Energy Utilization by the Cells	883
Control of Energy Release in the Cell	884
Metabolic Rate	884
Measurement of the Whole-Body Metabolic Rate	885
Energy Metabolism—Factors That Influence Energy Output	885
Overall Energy Requirements for Daily Activities	885
Basal Metabolic Rate (BMR)—The Minimum Energy Expenditure for the Body to Exist	886
Energy Used for Physical Activities	887
Energy Used for Processing Food—Thermogenic Effect of Food	887
Energy Used for Nonshivering Thermogenesis—Role of Sympathetic Stimulation	887

CHAPTER 73

Body Temperature, Temperature Regulation, and Fever

Normal Body Temperatures	889
Body Temperature Is Controlled by Balancing Heat Production Against Heat Loss	889
Heat Production	889
Heat Loss	890
Regulation of Body Temperature—Role of the Hypothalamus	894
Neuronal Effector Mechanisms That Decrease or Increase Body Temperature	895
Concept of a “Set-Point” for Temperature Control	896
Behavioral Control of Body Temperature	897
Abnormalities of Body Temperature Regulation	898
Fever	898
Exposure of the Body to Extreme Cold	900

UNIT XIV

Endocrinology and Reproduction

CHAPTER 74

Introduction to Endocrinology

Coordination of Body Functions by Chemical Messengers	905
Chemical Structure and Synthesis of Hormones	905
Hormone Secretion, Transport, and Clearance from the Blood	906
Feedback Control of Hormone Secretion	908
Transport of Hormones in the Blood	909
“Clearance” of Hormones from the Blood	909
Mechanisms of Action of Hormones	910
Hormone Receptors and Their Activation	910
Intracellular Signaling After Hormone Receptor Activation	910
Second Messenger Mechanisms for Mediating Intracellular Hormonal Functions	912
Hormones That Act Mainly on the Genetic Machinery of the Cell	915
Measurement of Hormone Concentrations in the Blood	915
Radioimmunoassay	915
Enzyme-Linked Immunosorbent Assay (ELISA)	916

CHAPTER 75

Pituitary Hormones and Their Control by the Hypothalamus

Pituitary Gland and Its Relation to the Hypothalamus	918
Hypothalamus Controls Pituitary Secretion	918
Hypothalamic-Hypophyseal Portal Blood Vessels of the Anterior Pituitary Gland	919
Physiological Functions of Growth Hormone	920

Growth Hormone Promotes Growth of Many Body Tissues	922
Growth Hormone Has Several Metabolic Effects	922
Growth Hormone Stimulates Cartilage and Bone Growth	923
Growth Hormone Exerts Much of Its Effect Through Intermediate Substances Called “Somatomedins” (Also Called “Insulin-Like Growth Factors”)	923
Regulation of Growth Hormone Secretion	924
Abnormalities of Growth Hormone Secretion	926
Posterior Pituitary Gland and Its Relation to the Hypothalamus	927
Chemical Structures of ADH and Oxytocin	928
Physiological Functions of ADH	928
Oxytocic Hormone	929

CHAPTER 76

Thyroid Metabolic Hormones

Synthesis and Secretion of the Thyroid Metabolic Hormones	931
Iodine Is Required for Formation of Thyroxine	931
Iodide Pump (Iodide Trapping)	932
Thyroglobulin, and Chemistry of Thyroxine and Triiodothyronine Formation	932
Release of Thyroxine and Triiodothyronine from the Thyroid Gland	933
Transport of Thyroxine and Triiodothyronine to Tissues	934
Physiologic Functions of the Thyroid Hormones	934
Thyroid Hormones Increase the Transcription of Large Numbers of Genes	934
Thyroid Hormones Increase Cellular Metabolic Activity	934
Effect of Thyroid Hormone on Growth	936
Effects of Thyroid Hormone on Specific Bodily Mechanisms	936
Regulation of Thyroid Hormone Secretion	938
Anterior Pituitary Secretion of TSH Is Regulated by Thyrotropin-Releasing Hormone from the Hypothalamus	938
Feedback Effect of Thyroid Hormone to Decrease Anterior Pituitary Secretion of TSH	939
Diseases of the Thyroid	940
Hyperthyroidism	940
Symptoms of Hyperthyroidism	940
Hypothyroidism	941
Cretinism	942

CHAPTER 77

Adrenocortical Hormones

Synthesis and Secretion of Adrenocortical Hormones	944
Functions of the Mineralocorticoids—Aldosterone	947
Renal and Circulatory Effects of Aldosterone	948
Aldosterone Stimulates Sodium and Potassium Transport in Sweat Glands, Salivary Glands, and Intestinal Epithelial Cells	949

Cellular Mechanism of Aldosterone Action	950	Calcium in the Plasma and Interstitial Fluid	978
Possible Nongenomic Actions of Aldosterone and Other Steroid Hormones	950	Inorganic Phosphate in the Extracellular Fluids	979
Regulation of Aldosterone Secretion	950	Non-Bone Physiologic Effects of Altered Calcium and Phosphate Concentrations in the Body Fluids	979
Functions of the Glucocorticoids	950	Absorption and Excretion of Calcium and Phosphate	980
Effects of Cortisol on Carbohydrate Metabolism	951	Bone and Its Relation to Extracellular Calcium and Phosphate	980
Effects of Cortisol on Protein Metabolism	952	Precipitation and Absorption of Calcium and Phosphate in Bone—Equilibrium with the Extracellular Fluids	981
Effects of Cortisol on Fat Metabolism	952	Calcium Exchange Between Bone and Extracellular Fluid	982
Cortisol Is Important in Resisting Stress and Inflammation	952	Deposition and Absorption of Bone—Remodeling of Bone	982
Other Effects of Cortisol	954	Vitamin D	983
Cellular Mechanism of Cortisol Action	954	Actions of Vitamin D	985
Regulation of Cortisol Secretion by Adrenocorticotrophic Hormone from the Pituitary Gland	955	Parathyroid Hormone	985
Adrenal Androgens	957	Effect of Parathyroid Hormone on Calcium and Phosphate Concentrations in the Extracellular Fluid	986
Abnormalities of Adrenocortical Secretion	957	Control of Parathyroid Secretion by Calcium Ion Concentration	988
Hypoadrenalism-Addison's Disease	957	Calcitonin	988
Hyperadrenalism-Cushing's Syndrome	958	Summary of Control of Calcium Ion Concentration	989
Primary Aldosteronism (Conn's Syndrome)	959	Pathophysiology of Parathyroid Hormone, Vitamin D, and Bone Disease	990
Adrenogenital Syndrome	959	Primary Hyperparathyroidism	990
		Secondary Parathyroidism	991
CHAPTER 78		Rickets—Vitamin D Deficiency	991
Insulin, Glucagon, and Diabetes Mellitus	961	Osteoporosis—Decreased Bone Matrix	991
Insulin and Its Metabolic Effects	961	Physiology of the Teeth	992
Effect of Insulin on Carbohydrate Metabolism	963	Function of the Different Parts of the Teeth	992
Effect of Insulin on Fat Metabolism	965	Dentition	993
Effect of Insulin on Protein Metabolism and on Growth	966	Mineral Exchange in Teeth	993
Mechanisms of Insulin Secretion	967	Dental Abnormalities	994
Control of Insulin Secretion	968		
Other Factors That Stimulate Insulin Secretion	969	CHAPTER 80	
Role of Insulin (and Other Hormones) in "Switching" Between Carbohydrate and Lipid Metabolism	969	Reproductive and Hormonal Functions of the Male (and Function of the Pineal Gland)	996
Glucagon and Its Functions	970	Physiologic Anatomy of the Male Sexual Organs	996
Effects on Glucose Metabolism	970	Spermatogenesis	996
Regulation of Glucagon Secretion	971	Steps of Spermatogenesis	996
Somatostatin Inhibits Glucagon and Insulin Secretion	971	Function of the Seminal Vesicles	999
Summary of Blood Glucose Regulation	971	Function of the Prostate Gland	999
Diabetes Mellitus	972	Semen	999
Type I Diabetes—Lack of Insulin Production by Beta Cells of the Pancreas	972	Male Sexual Act	1001
Type II Diabetes—Resistance to the Metabolic Effects of Insulin	974	Abnormal Spermatogenesis and Male Fertility	1001
Physiology of Diagnosis of Diabetes Mellitus	975	Neuronal Stimulus for Performance of the Male Sexual Act	1001
Treatment of Diabetes	976	Stages of the Male Sexual Act	1002
Insulinoma—Hyperinsulinism	976	Testosterone and Other Male Sex Hormones	1003
		Secretion, Metabolism, and Chemistry of the Male Sex Hormone	1003
CHAPTER 79		Functions of Testosterone	1004
Parathyroid Hormone, Calcitonin, Calcium and Phosphate Metabolism, Vitamin D, Bone, and Teeth	978	Basic Intracellular Mechanism of Action of Testosterone	1006
Overview of Calcium and Phosphate Regulation in the Extracellular Fluid and Plasma	978		

Control of Male Sexual Functions by Hormones from the Hypothalamus and Anterior Pituitary Gland	1006
Abnormalities of Male Sexual Function	1008
Prostate Gland and Its Abnormalities	1008
Hypogonadism in the Male	1008
Testicular Tumors and Hypergonadism in the Male	1009
Pineal Gland—Its Function in Controlling Seasonal Fertility in Some Animals	1009

CHAPTER 8 1

Female Physiology Before Pregnancy and Female Hormones	1011
Physiologic Anatomy of the Female Sexual Organs	1011
Female Hormonal System	1011
Monthly Ovarian Cycle; Function of the Gonadotropic Hormones	1012
Gonadotropic Hormones and Their Effects on the Ovaries	1012
Ovarian Follicle Growth—The “Follicular” Phase of the Ovarian Cycle	1013
Corpus Luteum—“Luteal” Phase of the Ovarian Cycle	1014
Summary	1015
Functions of the Ovarian Hormones— Estradiol and Progesterone	1016
Chemistry of the Sex Hormones	1016
Functions of the Estrogens—Their Effects on the Primary and Secondary Female Sex Characteristics	1017
Functions of Progesterone	1018
Monthly Endometrial Cycle and Menstruation	1018
Regulation of the Female Monthly Rhythm—Interplay Between the Ovarian and Hypothalamic-Pituitary Hormones	1019
Feedback Oscillation of the Hypothalamic- Pituitary-Ovarian System	1021
Puberty and Menarche	1021
Menopause	1022
Abnormalities of Secretion by the Ovaries	1023
Female Sexual Act	1023
Female Fertility	1024

CHAPTER 8 2

Pregnancy and Lactation	1027
Maturation and Fertilization of the Ovum	1027
Transport of the Fertilized Ovum in the Fallopian Tube	1028
Implantation of the Blastocyst in the Uterus	1029
Early Nutrition of the Embryo	1029
Function of the Placenta	1029
Developmental and Physiologic Anatomy of the Placenta	1029
Hormonal Factors in Pregnancy	1031
Human Chorionic Gonadotropin and Its Effect to Cause Persistence of the Corpus Luteum and to Prevent Menstruation	1032
Secretion of Estrogens by the Placenta	1032
Secretion of Progesterone by the Placenta	1033
Human Chorionic Somatomammotropin	1033
Other Hormonal Factors in Pregnancy	1034

Response of the Mother's Body to Pregnancy	1034
Changes in the Maternal Circulatory System During Pregnancy	1035
Parturition	1036
Increased Uterine Excitability Near Term	1036
Onset of Labor—A Positive Feedback Mechanism for Its Initiation	1037
Abdominal Muscle Contractions During Labor	1037
Mechanics of Parturition	1037
Separation and Delivery of the Placenta	1038
Labor Pains	1038
Involution of the Uterus After Parturition	1038
Lactation	1038
Development of the Breasts	1038
Initiation of Lactation—Function of Prolactin	1039
Ejection (or “Let-Down”) Process in Milk Secretion—Function of Oxytocin	1040
Milk Composition and the Metabolic Drain on the Mother Caused by Lactation	1041

CHAPTER 8 3

Fetal and Neonatal Physiology	1042
Growth and Functional Development of the Fetus	1042
Development of the Organ Systems	1042
Adjustments of the Infant to Extrauterine Life	1044
Onset of Breathing	1044
Circulatory Readjustments at Birth	1045
Nutrition of the Neonate	1047
Special Functional Problems in the Neonate	1047
Respiratory System	1047
Circulation	1047
Fluid Balance, Acid-Base Balance, and Renal Function	1048
Liver Function	1048
Digestion, Absorption, and Metabolism of Energy Foods; and Nutrition	1048
Immunity	1049
Endocrine Problems	1049
Special Problems of Prematurity	1050
Immature Development of the Premature Infant	1050
Instability of the Homeostatic Control Systems in the Premature Infant	1050
Danger of Blindness Caused by Excess Oxygen Therapy in the Premature Infant	1051
Growth and Development of the Child	1051
Behavioral Growth	1052

UNIT XV

Sports Physiology

CHAPTER 8 4	
Sports Physiology	1055
Muscles in Exercise	1055
Strength, Power, and Endurance of Muscles	1055
Muscle Metabolic Systems in Exercise	1056
Phosphocreatine-Creatine System	1057

Nutrients Used During Muscle Activity	1059	Body Fluids and Salt in Exercise	1065
Effect of Athletic Training on Muscles and Muscle Performance	1060	Drugs and Athletes	1065
Respiration in Exercise	1061	Body Fitness Prolongs Life	1066
Cardiovascular System in Exercise	1062		
Body Heat in Exercise	1065	Index	1067
