<b>1. USE OF SYSTEMS ANALYSIS AND SIMULATION IN WILDLIFE AND FISHERIES SCIENCES</b>	<b>1</b>
1.1 Introduction, 1	
1.2 Some basic concepts and definitions, 5	
1.3 Four phases of systems analysis, 14	
1.4 Two brief case histories, 22	
1.5 Additional reading, 34	
<b>2. CONCEPTUAL MODEL FORMULATION</b>	<b>37</b>
2.1 Introduction, 37	
2.2 Bounding the system of interest, 38	
2.3 Categorizing components within the system of interest, 42	
2.4 Identifying relationships between components that are of interest, 45	
2.5 Formally representing the conceptual model, 48	
2.6 Example of conceptual model formulation: Hypothetical pond system, 52	
2.7 Exercises, 58	
<b>3. QUANTITATIVE SPECIFICATION OF THE MODEL</b>	<b>60</b>
3.1 Introduction, 60	
3.2 Choosing the general quantitative structure for the model, 61	
3.3 Choosing functional forms of model equations, 65	
3.4 Choosing the basic time unit for simulations and parameterizing model equations, 69	
3.5 Formally presenting and computer coding model equations and executing the baseline simulation, 80	
3.6 Example of quantitative specification of the model: Hypothetical pond system, 88	
3.7 Exercises, 123	

<b>4. MODEL VALIDATION</b>	<b>129</b>
4.1 Introduction, 129	
4.2 Examining capability of the model to address the problem of interest, 130	
4.3 Examining reasonableness of model structure and individual model mechanisms, 132	
4.4 Examining qualitative reasonableness of overall model behavior, 133	
4.5 Examining quantitative correspondence between overall model behavior and real system behavior, 137	
4.6 Sensitivity analysis of the model, 149	
4.7 Example of model validation: Hypothetical pond model, 151	
4.8 Exercises, 166	
<b>5. MODEL USE</b>	<b>168</b>
5.1 Introduction, 168	
5.2 Identifying management policies or environmental situations to be evaluated and representing them in the model, 169	
5.3 Developing the experimental design for simulations, 170	
5.4 Analyzing and interpreting simulation results, 172	
5.5 Further examining selected types of management policies or environmental situations, 175	
5.6 Example of model use: Hypothetical pond model, 178	
5.7 Exercises, 199	
<b>6. A FEW WORDS OF CAUTION</b>	<b>200</b>
6.1 Introduction, 200	
6.2 Example 1: Fishery model, 200	
6.3 Example 2: Wildlife model, 208	
6.4 Concluding remarks, 221	
<b>APPENDIX 1. MATRIX ALGEBRA</b>	<b>223</b>
A1.1 Introduction, 223	
A1.2 Matrix terminology and basic matrix calculations, 224	
A1.3 Examples of use of matrix algebra in wildlife and fisheries sciences, 231	
<b>APPENDIX 2. DIFFERENTIAL AND DIFFERENCE EQUATIONS</b>	<b>241</b>
A2.1 Introduction, 241	
A2.2 Differential and difference equation terminology and basic calculus concepts, 242	

- A2.3 Examples of use of differential and difference equations in wildlife and fisheries sciences, 248

**APPENDIX 3. REGRESSION ANALYSIS** **252**

- A3.1 Introduction, 252  
A3.2 Regression terminology and simple linear regression, 253  
A3.3 Multiple linear regression, 259  
A3.4 Linear transformations, 263  
A3.5 Examples of use of regression analysis in wildlife and fisheries sciences, 265

**APPENDIX 4. COMPUTERS AND PROGRAMMING** **266**

- A4.1 Introduction, 266  
A4.2 Analog computers, 267  
A4.3 Digital computers, 267

**APPENDIX 5. COMPUTER PROGRAM FOR THE POND SIMULATION MODEL** **271**

- A5.1 Introduction, 271  
A5.2 User's guide, 271  
A5.3 Program listing, 278

**APPENDIX 6. ANSWERS TO EXERCISES** **304**

- A6.1 Answers to Chapter 2 exercises, 304  
A6.2 Answers to Chapter 3 exercises, 306  
A6.3 Answers to Chapter 4 exercises, 314  
A6.4 Answers to Chapter 5 exercises, 322

References, 327

Index, 333
