

TABLE OF CONTENTS

1. MARKOV CHAINS

1.1 Homogeneous Markov chains	5
1.2 Absorbing Markov chains	6
1.3 Irreducible Markov chains	9
1.4 Applications	11

2. CONTINUOUS TIME MARKOV PROCESSES

2.1 General properties	13
2.2 Poisson process	15
2.3 Birth and death processes	17
2.4 Examples	19

3. RENEWAL PROCESSES

3.1 Definition and basic properties	21
3.2 Elements of renewal theory	22
3.3 Terminating renewal process	25
3.4 Insurance ruin problem	26

4. STATIONARY AND INTEGRATED PROCESSES

4.1 Basic notions	29
4.2 Autoregressive processes	31
4.3 Moving average processes	32
4.4 Mixed processes	33
4.5 Integrated processes	34

5. PROCESSES WITH CONDITIONAL VARIANCE

5.1 Logarithmic-normal autoregressive model	37
5.2 ARCH and GARCH processes	41
5.3 Another stochastic models	44

6. BROWNIAN MOTION

6.1 Definition	47
6.2 Martingales	48
6.3 Elements of stochastic calculus	50

7. FINANCIAL APPLICATIONS

7.1 Binomial trees	55
7.2 Black-Scholes model	58
7.3 Term structure of interest rates	60

8. UTILITY THEORY AND RISK MEASURES

8.1 Elements of utility theory	63
8.2 Premium principles	64
8.3 Risk measures	66

9. RISK MODELS

9.1 Individual risk models	71
9.2 Collective risk models	73
9.3 Stop-loss reinsurance	76

10. MONTE CARLO SIMULATION

10.1 Basic principles	79
10.2 Random numbers	80
10.3 Variance reduction methods	84
