## CHAPTER 1

### Nuclear Power in the World Today 1

1.1	Popular Types of Reactors and Their Design Characteristics	1
1.2	Number of Power Reactors in the World Today	1
1.3	Power Reactor Architectures	2
1.4	Power Reactors and Their Design Parameters	6
1.5	Schematic of a Nuclear Power Plant	7
1.6	Coolants Used in Nuclear Power Plants	8
1.7	Types of Nuclear Reactor Fuel	12
1.8	Properties of Nuclear Fuel	12
1.9	Reactor Pressure Vessels and Their Properties	13
1.10	Thermal Energy Production from Nuclear Fuel Rods	16
1.11	Fuel Rod Cladding	17
1.12	Nuclear Fuel Assemblies	19
1.13	PWR, BWR, and LMFBR Fuel Assemblies	20
1.14	Number of Fuel Rods in a Reactor Fuel Assembly	21
1.15	Fuel Rods in Square Fuel Assemblies	22
1.16	Fuel Rods in Hexagonal Fuel Assemblies	23
1.17	Other Fuel Assemblies: CANDU Fuel Assemblies	23
1.18	Characteristics of Reactor Fuel Assemblies	24
1.19	Design Parameters for Reactor Fuel Assemblies	26
1.20	Characteristics of Reactor Cores	26
1.21	Core Composition	28
1.22	Lattice Geometries	30
1.23	Unit Cells	31
1.24	The Infinite Lattice Approximation	32
1.25	Accounting for the Fuel-to-Cladding Gap	33
1.26	Fuel Assembly Loading Schemes	34
1.27	Reactor Refueling Cycles	37
1.28	An Overview of Nuclear Fuel Management	38
1.29	Core Loading Patterns	40
1.30	Ways to Measure the Amount of Nuclear Fuel That Has Been Burned	41
1.31	Alternative Ways for Measuring the Burnup of the Fuel	43
1.32	Other Important Nuclear Reactor Properties (Power Density and Thermal Efficiency)	44

1.33	Power Density	44
1.34	Thermal Efficiency	45
1.35	Control Rods and Their Function	47
1.36	Comparing PWR Control Rods and BWR Control Rods	48
1.37	Use of the Scram Button and the Word SCRAM	51
1.38	Maintaining the Criticality of the Core over Time	51
1.39	Electrical Generating Systems in a Nuclear Power Plant	51
1.40	Steam Generators in Nuclear Power Plants	51
1.41	Steam Turbines	53
1.42	Steam Generator and Steam Turbine Pairing	53
1.43	Electrical Generators	53
1.44	Common Measurements of Electrical Energy Production	55
1.45	Reviewing What We Have Just Learned	58
	References	58
	Books and Textbooks	58
	Web References	58
	Questions for the Student	59
	Exercises for the Student	63

## CHAPTER 2

### Neutrons and Other Important Particles of Reactor Physics 67

2.1	Reactor Physics and the Study of the Neutron	67
2.1.1	Nuclear Particles and Particle Types	67
2.2	Visualizing the Atomic Nucleus	70
2.3	Basic Laws of the Nuclear World: The Conservation of Mass/Energy, Momentum, and Charge	71
2.4	Units for Measuring Nuclear Mass	71
2.5	Protons and Neutrons: The Building Blocks of the Atomic Nucleus	73
2.6	Gluon and the Nuclear Force Field	75
2.7	Yukawa Potential and the Coulomb Potential	76
2.8	Visualizing the Nuclear Binding Force	76
2.9	Nucleus and Its Surface	79
2.10	Density of the Atomic Nucleus	79
2.11	How the Number of Neutrons Affects the Stability of a Nucleus	80
2.12	Other Factors That Affect Nuclear Stability	80

2.13	Differences between Chemical and Nuclear Bonds	82	3.4	Prompt and Delayed Neutrons	118
2.13.1	Difference #1: The Strength of the Nuclear and Chemical Bonds	82	3.4.1	The Prompt Neutron Energy Spectrum	118
2.13.2	Difference #2: The Existence of Discrete Energy Levels	82	3.4.2	Understanding the Terms in the Watt Equation	119
2.13.3	Difference #3: The Range of the Chemical and Nuclear Forces	84	3.5	The Delayed Neutron Fraction	120
2.14	How Nuclear Energy Is Measured	85	3.6	Types of Neutron Interactions	120
2.15	Estimating the Energy of the Neutron, the Proton, and the Electron	86	3.7	Modeling the Emission of a Neutron from an Atomic Nucleus	122
2.16	Conservation of Linear Momentum in Particle Reactions	89	3.8	Coordinate System Independence during Particle Collisions	123
2.17	Momentum Conservation in Reactions Involving Photons	91	3.9	Momentum Conservation for a Multiparticle System	125
2.18	Conservation of the Baryon Number in Nuclear Reactions	92	3.10	What Happens When a Neutron Hits an Atomic Nucleus	127
2.19	Some Final Observations	92	3.11	Including Photons and Neutrinos in Common Particle Collisions	129
2.20	Effects of Relativity on Particle Behavior	93	3.12	The Physics of Head-On Collisions	130
2.21	Effect of Motion on Particle Behavior and Radioactive Decay	95	3.13	Particle Backscattering	132
2.22	Relationship between the Mass and the Energy of Matter Particles	96	3.14	Finding the Energy Loss in a Head-On Elastic Collision	133
2.23	Behavior of Nuclear Particles at Very High Speeds	97	3.15	The Energy Loss in a Glancing Collision	135
2.24	Converting Particle Energies to Particle Velocities	99	3.16	Neutron Energy Loss as a Function of Scattering Angle	138
2.25	Relationship between the Energy of a Neutron and Its Velocity	100	3.17	Scattering Angles in the Laboratory and Center of Mass Systems	138
2.26	Speed of Photon Propagation in a Material Medium	101	3.18	A More Detailed Look at the Interaction of Neutrons with Matter	141
2.27	Controlling the Behavior of Nuclear Particles without an Electrical Charge	102	3.19	Reviewing Elastic Neutron Scattering	141
2.28	Connecting the Microscopic World to the Macroscopic One	103	3.20	Reviewing Inelastic Neutron Scattering	142
2.29	Calculating Nuclear Energy from $E = mc^2$	103	3.21	Neutron Beam Generators	143
2.30	Understanding Nuclear Energy Production	105	3.22	Generating Cold Neutron Beams	143
2.31	Converting the Kinetic Energy of Nuclear Particles into Thermal Energy and Heat	105	3.23	Understanding the Difference between Neutron Capture and Neutron Absorption	144
References		107	3.24	Neutrons and Their Role in the Nuclear Fission Process	145
Books and Textbooks		107	3.25	Examining the Nuclear Fission of Uranium-235 in More Detail	147
Web References		107	3.25.1	Outcome 1	147
Additional References		107	3.25.2	Outcome 2	147
Questions for the Student		108	3.26	Fission Products and Fission Product Poisons	148
Exercises for the Student		111	3.27	The Energetics of Nuclear Fission	148
 			3.28	Standard Notation Used to Describe Different Nuclear Reactions	149
<b>CHAPTER 3</b>			3.29	Some Final Observations regarding Elastic Scattering Reactions	150
<b>Nuclear Particles, Processes, and Reactions</b>			3.30	Neutron Moderators and Neutron Kinetic Energy Loss	152
3.1	Nuclear Particle Behavior	115	3.31	Using a Neutron Balance Equation to Model the Behavior of Large Numbers of Neutrons	152
3.2	Determining the Behavior of Particles with an Electric Charge	115	3.32	Scattering Angles and Scattering Probabilities	152
3.3	The Behavior of Neutrons	117			

3.33	Scattering Angles in Inelastic Collisions	155
3.34	Neutron Scattering in Heavy Materials	155
3.35	Defining the Differential Scattering Probability	156
3.36	The Scattering of Alpha Particles	158
3.37	The Rutherford Scattering Formula	158
References		160
	Books and Textbooks	160
	Web References	160
	Additional References	160
	Questions for the Student	161
	Exercises for the Student	163

## CHAPTER 4

### Nuclear Cross Sections, Reaction Probabilities, and Reaction Rates 167

4.1	Nuclear Cross Sections and Their Uses	167
4.2	Types of Nuclear Cross Sections	167
4.3	Reaction Resonances and Nuclear Cross Sections	171
4.4	Reaction Resonances and Compound Nucleus Formation	172
4.5	Nuclear Cross Sections and Reaction Rates	174
4.6	Finding Energy-Dependent Reaction Rates	176
4.7	Fast and Thermal Neutron Cross Sections	177
4.8	Cross Sections with More than Two Energy Groups	179
4.9	Multigroup Approximation	180
4.10	Fission Cross Sections for Neutrons Having Any Kinetic Energy	181
4.11	Absorption Cross Sections for Neutrons Having Any Energy	182
4.12	Radiative Capture	183
4.13	Scattering Cross Sections for Neutrons with Any Kinetic Energy	184
4.14	Nuclear Properties of Hydrogen and Deuterium	186
4.15	Methods for Estimating the Total Cross Section	187
4.16	Converting Microscopic Cross Sections to Macroscopic Ones	189
4.17	A Brief Chemical Primer	189
4.18	A Practical Example of a Cross Section Calculation	190
4.19	Finding the Cross Sections for a Pure Material	191
4.20	Relationship between the Physical Density and the Atomic Density	192
4.21	Finding Macroscopic Cross Sections for a Complex Nuclear Material	193

4.22	Public Cross Section Libraries	194
4.23	Measuring Avogadro's Number	196
4.24	Uranium Dioxide and Its Properties	198
4.25	Important Cross Section Naming Conventions	200
References		200
	Books and Textbooks	200
	Web References	201
	Additional References	201
	Questions for the Student	202
	Exercises for the Student	204

## CHAPTER 5

### Cross Section Libraries and Sources of Practical Nuclear Data 207

5.1	Sources of Nuclear Cross Section Data	207
5.2	A Very Important Table with Three Distinct Parts	207
5.3	Online Plotting Tools (A Tool for Plotting Nuclear Cross Sections—ENDF/PLOT)	215
5.4	Cross Sections and ENDF/B Nomenclature	215
5.5	Comparison of Cross Sections for Common Nuclear Materials	217
5.6	Finding the Number of Atoms or Molecules in a Given Sample of Material	219
5.7	Other Applications	221
5.8	Thermal Cross Sections for $1/v$ and Non- $1/v$ Absorbers	221
5.9	Thermal Energy Group Cross Sections	223
5.10	Cross Sections and the Behavior of the Neutron Flux near a Reaction Resonance	225
5.11	Creating Neutron Cross Section Libraries from Raw Data	226
5.12	Finding the Neutron Energy Spectrum to Build a Group Cross Section Library	232
5.13	Collapsing the Group Cross Sections When Needed	233
5.14	Conserving the Reaction Rates When Collapsing to a Single Energy Group	235
5.15	Group Flux and Average Flux within a Group	239
5.16	Using Large Numbers of Energy Groups	241
5.17	Realistic Reactor Design Practices	243
5.18	A Simple Design Exercise	244
5.19	Cross Section Naming Conventions	246
References		247
	Books and Textbooks	247
	Web References	248
	Additional References	248
	Questions for the Student	249
	Exercises for the Student	250

## CHAPTER 6

## Nuclear Fuels, Nuclear Structure, the Mass Defect, and Radioactive Decay 255

- 6.1 Elements, Isotopes, and Nuclear Fuels 255
- 6.2 The Periodic Table 255
- 6.3 Elements and Isotopes in the Periodic Table 257
- 6.4 Man-Made Elements 259
- 6.5 Fractional Atomic Weights and Their Meaning 262
- 6.6 Effect of Binding Energy on Isotopic Rest Mass 264
- 6.7 Fundamental Origins of Fission and Fusion 265
- 6.8 The Mass Defect and Its Origin 265
- 6.9 Nuclear Binding Energy Curve 268
- 6.10 Energy Released due to Missing Nuclear Mass 270
- 6.11 Physical Basis for the Shape of the Nuclear Binding Energy Curve 271
- 6.12 Liquid Drop Model of the Atomic Nucleus 273
  - 6.12.1 The Volume Energy Term 275
  - 6.12.2 The Surface Energy Term 275
  - 6.12.3 The Electrical Energy Term 275
  - 6.12.4 The Asymmetry Energy Term 276
  - 6.12.5 The Pairing Energy Term 276
- 6.13 Interpreting the Results 276
- 6.14 Shell Model of the Nucleus 278
- 6.15 How Nuclear Fission Is Related to Nuclear Structure 279
- 6.16 Nuclear Fuels and Their Properties 280
- 6.17 Difference between Controlled and Uncontrolled Nuclear Reactions 282
- 6.18 The Process of Uranium Enrichment 283
- 6.19 Man-Made Elements and Nuclear Fuels 285
- 6.20 The Element Neptunium 285
- 6.21 The Element Plutonium 286
- 6.22 Production of Plutonium-239 286
- 6.23 Plutonium-239 Decay 288
- 6.24 Other Isotopes of Plutonium 289
- 6.25 Radioactivity and Radioactive Decay 289
- 6.26 Force Imbalances and the Origin of Radioactivity 289
- 6.27 Statistical Probability Distributions Associated with Radioactive Decay 292
- 6.28 Laws of Radioactive Decay 294
- 6.29 Exponential Functions and Their Relationship to Radioactive Decay 295
- 6.30 Equations Governing a Sample of Several Radioactive Elements 296
- 6.31 Measuring the Radioactive Decay Rate 298
- 6.32 Extensions to Radioactive Materials That Can Both Multiply and Decay 300

- 6.33 Time-Dependent Activity of a Radioactive Material 300
- 6.34 Half-Life of a Radioactive Material 301
- 6.35 Half-Lives, Average Lives, Decay Constants, and Doubling Times 302
- 6.36 Understanding the Equations of Secular Equilibrium 304
- 6.37 A Stable Daughter and a Radioactive Parent 306
- 6.38 Isotopic Stability and the Periodic Table 306
- 6.39 Radiation Released by Radioactive Materials 308
- 6.40 Gamma Rays in Nuclear Power Plants 309
- 6.41 How Nuclear Decay Heat Is Produced 309
- References 310
  - Books and Textbooks 310
  - Web References 310
  - Additional References 310
- Questions for the Student 311
- Exercises for the Student 314

## CHAPTER 7

## Nuclear Fission and Nuclear Energy Production 319

- 7.1 Converting Mass into Energy 319
- 7.2 Fission and Fusion: A Review of Fundamental Concepts 319
- 7.3 Uranium and Its Characteristics 321
- 7.4 Energy Output: Fission versus Fusion 323
- 7.5 Splitting of the Uranium Atom: The Process of Induced Fission 323
- 7.6 Understanding the Fission of Uranium-235 324
- 7.7 Capture and Fission Channels for U-235 324
  - 7.7.1 Channel 1: Capture 325
  - 7.7.2 Channel 2: Fission 326
- 7.8 Fission Neutron Energy Spectrum 327
- 7.9 Fast, Epithermal, and Thermal Energy Ranges for Nuclear Fission 329
- 7.10 Mass Distribution of the Fission Fragments 330
- 7.11 Amount of Energy Released from the Fission of Different Nuclear Materials 330
- 7.12 Neutrons Released per Fission 332
- 7.13 Neutrons Released per Neutron Absorbed 333
- 7.14 The Value of Eta for Different Fuel Mixtures 335
- 7.15 Nuclear Energy Release versus Chemical Energy Release 337
  - 7.15.1 An Interesting Comparison 338
- 7.16 Energy Release per Fission 338
- 7.17 The Origin of Nuclear Energy 338
- 7.18 The Threshold Energy for Fission 340
  - 7.18.1 The Critical Energy of Fission 341

7.19	Some Examples of the Amount of Energy Produced	342
7.20	Differences in Fission Product and Uranium and Plutonium Masses	343
7.21	Types of Nuclear Chain Reactions	344
7.22	The Speed of a Nuclear Chain Reaction	348
7.23	Neutron Velocities at Different Neutron Energies	350
7.24	The Total Energy Released by a Fission Reaction	351
7.25	Electrical versus Thermal Energy Production	352
7.26	Finding the Uranium Consumption Rate over Time	352
7.27	Prompt Neutrons and Their Origin	353
7.28	Delayed Neutrons and Their Origin	353
7.29	Buildup of Xenon and Samarium	357
7.30	Cumulative Effect of the Buildup of Fission Product Poisons	358
References		359
	Books and Textbooks	359
	Web References	360
	Additional References	360
	Questions for the Student	361
	Exercises for the Student	363

## CHAPTER 8

### Neutron Slowing Down Theory, Neutron Moderators, and Reactor Coolants 367

8.1	Introduction	367
8.2	Neutron Moderators and Their Function	367
8.3	Reactor Coolant Comparisons	368
8.4	Common Reactor Coolants and Their Properties	369
8.4.1	Category I: Thermal Water Reactor Coolants	369
8.4.2	Category II: Gas Reactor Coolants	370
8.4.3	Category III: Fast Reactor or Liquid Metal Coolants	370
8.5	Fast Reactors versus Thermal Reactors	371
8.6	Advantages to Moderating a Neutron	374
8.7	The Relationship between the Temperature, the Energy, and the Velocity of a Moderated Neutron	376
8.8	The Origin of the Term Thermal Neutron	378
8.9	The Apparent Temperature of a Fission Neutron	379
8.10	Neutron Slowing Down Theory	380
8.11	The Energy Staircase	380
8.12	The Lethargy and Its Application to Neutron Slowing Down Theory	382

8.13	Collisions between Neutrons and More Complex Materials	384
8.14	The Moderating Ratio	385
8.15	The Maxwell-Boltzmann Probability Distribution	387
8.16	The Origin of the Maxwell-Boltzmann Probability Distribution	388
8.17	Maxwell's Derivation of the Maxwell-Boltzmann Probability Distribution	388
8.18	Boltzmann's Constant and Its Relationship to the Maxwell-Boltzmann Probability Distribution	390
8.19	Heavy Water and Some of Its Uses	392
8.20	The Process of Heavy Water Production	393
References		394
	Books and Textbooks	394
	Web References	395
	Additional References	395
	Questions for the Student	396
	Exercises for the Student	397

## CHAPTER 9

### The Neutron Multiplication Factor, the Reactivity, and the Four-Factor Formula 399

9.1	Uses for the Macroscopic Fission and Absorption Cross Sections	399
9.2	Meaning of the Effective Multiplication Factor	401
9.3	Relationship between the Effective Multiplication Factor and the Neutron Life Cycle	402
9.4	Finding the Effective Multiplication Factor and the Infinite Multiplication Factor with More than One Energy Group	404
9.5	Defining the Reactivity	405
9.6	Units for the Reactivity	407
9.7	Effect of Delayed Neutrons on the Value of the Reactivity	407
9.8	Using the Four-Factor and Six-Factor Formulas to Determine When a Reactor Becomes Critical	408
9.9	Unit Cells	408
9.10	Representing the Fuel to Cladding Gap	410
9.11	The Infinite Lattice Approximation	411
9.12	Four-Factor Formula for an Infinite Reactor Lattice	412
9.13	The First Factor: The Eta of the Fuel	415
9.14	The Second Factor: The Fast Fission Factor	416
9.15	The Third Factor: The Thermal Utilization	417
9.16	The Fourth Factor: The Resonance Escape Probability	419
9.17	Effects of Resonance Self-Shielding on the Resonance Escape Probability	422

9.18	Classical Form of the Four-Factor Formula	423
9.19	Representative Values of the Four Factors for a Reactor Lattice	423
9.20	Understanding the Neutron Life Cycle in a CANDU Reactor Unit Cell	423
9.21	Understanding the Neutron Life Cycle in a Westinghouse PWR Unit Cell	425
9.22	Understanding the Behavior of the Neutron Population in a Typical Reactor Unit Cell	426
9.23	How the Factors in the Four-Factor Formula Are Affected by Burnup	427
9.24	Understanding the Limitations of the Four-Factor Formula	427
9.25	Definitions of the Instantaneous Reactivity and the Net Reactivity	429
9.26	How Fuel Burnup Affects the Net Reactivity	430
9.27	Cross Sections Used to Calculate the Infinite Multiplication Factor and the Reactivity in Thermal Water Reactors	433
References		434
	Books and Textbooks	434
	Web References	434
	Additional References	434
	Questions for the Student	435
	Exercises for the Student	436

## CHAPTER 10

### Neutron Leakage, Reactor Criticality, and the Six-Factor Formula 439

10.1	Understanding the Purpose of the Six-Factor Formula	439
10.2	Finding the Value of $K_{\text{effective}}$ from $K_{\infty}$ in a Finite Reactor Lattice	439
10.3	Calculating the Fast and Thermal Nonleakage Probabilities	441
10.4	Physical Significance of the Six Factors	443
10.5	Criticality and Core Composition	444
10.6	Moderator to Fuel Ratio and the Four-Factor Formula	446
10.7	Optimal Moderator to Fuel Ratios and the Effect of the Pitch on the Value of $K$	448
10.8	Comparing Hexagonal Fuel Assemblies to Square Ones	450
10.9	Using the Six-Factor Formula to Predict When a System Becomes Critical	451
10.10	Some Limitations of the Four-Factor Formula and the Six-Factor Formula	452
10.11	Applying the Six-Factor Formula to the Great Natural Nuclear Reactors of Oklo	453

10.12	Estimating the Critical Size of the Oklo Reactors	455
10.13	Other Applications of the Six-Factor Formula	456
10.14	Reactor Characteristics and Some Typical Values of the Neutron Flux	456
10.15	Understanding the Relationship between the Flux and Power	456
10.16	Representative Values of the Flux and the Enrichment	457
10.17	Thermal to Fast Neutron Flux Ratios in Thermal Water Reactors	458
10.18	Comparing the Shape of the Fast and Thermal Buckling	459
10.19	Comparing Core Power Densities	460
References		462
	Books and Textbooks	462
	Web References	463
	Additional References	463
	Questions for the Student	464
	Exercises for the Student	466

## CHAPTER 11

### An Introduction to Neutron Diffusion Theory and Fick's Law of Diffusion 469

11.1	Neutrons and Their Flow through Matter	469
11.2	Definition of the Neutron Density	470
11.3	Definition of the Neutron Flux	471
11.4	Definition of the Neutron Current	473
11.5	Fick's Law of Diffusion	474
11.6	Neutron Diffusion Coefficient and Its Meaning	478
11.7	Some Limitations of Fick's Law	483
11.8	Introduction to the Neutron Diffusion Equation	484
11.9	Writing an Equation to Conserve Neutrons	485
11.10	Adding Sources and Sinks to the Neutron Conservation Equation	487
11.11	Derivation of the Time-Dependent Neutron Diffusion Equation	488
11.12	Steady-State Neutron Diffusion Equation	489
11.13	Steady-State Neutron Diffusion Equation with an External Neutron Source	490
11.14	Standard Form of the Steady-State Neutron Diffusion Equation	491
11.15	Boundary Conditions for the Neutron Diffusion Equation	493
11.16	Boundary Conditions for More than One Energy Group	494
11.17	Defining the Neutron Diffusion Length	495
11.18	Neutron Diffusion Distance	496

11.19	Neutron Mean Free Path and Its Relationship to Diffusion Theory	499
11.20	Monte Carlo Method: An Alternative to Neutron Diffusion Theory	500
11.21	Diffusion Theory versus Transport Theory	502
11.22	Use of Neutron Diffusion Theory with Control Rods	503
11.23	Assumptions about Neutron Diffusion Theory near a Cylindrical Control Rod	504
11.24	Other Uses for the Extrapolation Distance	505
11.25	Using Diffusion Theory near a BWR Control Rod	506
11.26	How the Diffusion Distance Is Derived	507
11.27	Finding the Diffusion Distance from a Point Source	508
11.28	Neutron Scattering and the Size of the Neutron Diffusion Coefficient	510
	References	512
	Books and Textbooks	512
	Web References	513
	Additional References	513
	Questions for the Student	514
	Exercises for the Student	516

## CHAPTER 12

### Multigroup Neutron Diffusion Theory 519

12.1	Multigroup Neutron Diffusion Theory and Its Applications	519
12.2	Introduction to Multigroup Theory	519
12.3	Energy-Dependent Diffusion Equation	519
12.4	Introducing the Two-Group Approximation	520
12.5	Multigroup Cross Sections	522
12.6	Deriving the Multigroup Approximation	523
12.7	Defining Scattering Cross Sections between Energy Groups	524
12.8	Multigroup Diffusion Coefficients	525
12.8.1	Alternative Definitions for the Diffusion Coefficient	526
12.9	Neutron Diffusion Equation with Two Energy Groups	526
12.10	Cramer's Rule	530
12.11	Solving the Inhomogeneous Neutron Diffusion Equation with Two Energy Groups	532
12.12	Solving the Two-Group Diffusion Equations in a Finite Reactor Core	532
12.13	Deriving the Six-Factor Formula from the Neutron Diffusion Equation	533
12.14	Modified One-Group Neutron Diffusion Theory	534
12.15	Working with the N-Speed Neutron Diffusion Equation	535

12.16	Matrix Form of the Multigroup Diffusion Equations	536
12.17	Fast and Thermal Flux Shapes Predicted by Two-Group Theory	537
12.18	Popular Multigroup Neutron Diffusion Theory Programs	539
12.19	Reactor Licensing Applications	539
12.20	Performing a Reactor Licensing Analysis with TRACE	540
12.21	Parameters to Use with the Multigroup Equations	542
	References	543
	Books and Textbooks	543
	Web References	543
	Additional References	544
	Questions for the Student	545
	Exercises for the Student	546

## CHAPTER 13

### Solutions to the Steady-State Neutron Diffusion Equation 549

13.1	Solutions to the Steady-State Neutron Diffusion Equation for Slab Reactor	549
13.2	Correlating the Power Level to the Neutron Flux	552
13.3	A Physical Interpretation for the Geometric Buckling	553
13.4	Design Parameters for Different Reactors	555
13.5	Boundary Conditions for the Neutron Flux	555
13.6	Solutions to the Neutron Diffusion Equation in Common Reactor Geometries	556
13.7	Understanding the Neutron Flux in a Three-Dimensional Rectangular Reactor	556
13.8	Understanding the Flux Shape in a Three-Dimensional Spherical Reactor	559
13.9	Understanding the Flux Shape in a Three-Dimensional Cylindrical Reactor	560
13.10	Understanding the Flux Shape in an Infinite Cylindrical Reactor	563
13.11	Finding the Peak-to-Average Power Ratio in a Bare Core	564
13.12	Flux and Power Shaping	565
13.13	Benefits of Reflected Reactors	566
13.14	Flux Shapes for Fast and Thermal Neutrons in a Reflected Thermal Reactor	566
13.15	Defining the Reflector Savings and the Albedo	567
13.16	Deriving the Reflector Savings from the Diffusion Equation	571
13.17	Predicting the Size of a Critical Reactor	574

13.18	Differences between the Geometric Buckling with One and Two Energy Groups	576
13.19	Optimum Sizes and Shapes for Reactor Cores	578
13.20	Calculating the Critical Mass for Bare Reactors Having Different Sizes and Shapes	580
13.21	Estimating the Effect of a Reflector on the Critical Mass	581
13.22	Saving Fuel with a Neutron Reflector	581
13.23	Dependence of the Buckling and Diffusion Coefficient on Temperature	582
13.24	Temperature Dependence of the Neutron Mean Free Path	587
13.25	Solutions to the Neutron Diffusion Equation with More than One Homogeneous Region	587
13.26	How to Model a Fuel Assembly next to a Reflector	592
13.27	Other Topics	594
	References	594
	Books and Textbooks	594
	Web References	595
	Additional References	595
	Questions for the Student	596
	Exercises for the Student	599

## CHAPTER 14

### Solving the Neutron Diffusion Equation with a Radioactive Source Term 601

14.1	Solutions to the Diffusion Equation with No Fissionable Materials	601
14.2	Types of Neutron Sources	602
14.3	General Solutions to the Neutron Diffusion Equation	603
14.4	Solutions to the Diffusion Equation with a Neutron Source on the Boundaries	604
14.5	Simple Planar Neutron Source	605
14.6	Point Sources of Neutrons	607
14.7	Radiation Field from a Point Source in a Vacuum	608
14.8	Understanding the Principle of Superposition	610
14.9	Some Additional Observations regarding the Principle of Superposition	610
14.10	Finding the Neutron Flux from Multiple Point Sources	613
14.11	Applying the Principle of Superposition to Neutrons in a Vacuum	614
14.12	Applying the Principle of Superposition to Light Waves	614

14.13	Simulating Line Sources of Neutrons	617
14.14	Solutions to the Neutron Diffusion Equation in a Diffusive Medium with a Distributed Source	618
14.15	Solving the Neutron Diffusion Equation with a Distributed Source	619
14.16	Two Diffusive Regions with a Distributed Neutron Source in the Interior One	621
14.17	Vacuum Boundary Conditions for the Diffusion Equation	623
14.18	Defining an Energy-Dependent Extrapolation Distance	625
14.19	A Planar Neutron Source with the Extrapolated Boundary Condition	626
14.20	Solutions to the Neutron Diffusion Equation with More than One Material Region	629
14.21	Introduction to the Iterative Power Method	630
14.22	Convergence Criteria and Numerical Errors	632
14.23	Solutions to the Neutron Diffusion Equation near a Burnable Poison	633
14.24	Time-Dependent Effects	636
14.25	Comparing the Neutron Diffusion Equation to Laplace's Equation, Poisson's Equation, and Helmholtz's Equation	637
14.26	Time-Dependent Neutron Diffusion Theory	639
	References	640
	Books and Textbooks	640
	Web References	640
	Additional References	641
	Questions for the Student	642
	Exercises for the Student	644

## CHAPTER 15

### Time-Dependent Reactors and Their Behavior 647

15.1	Time-Dependent Reactor Behavior	647
15.2	Time-Dependent Neutron Production	648
15.3	Delayed Neutrons and Their Importance	649
15.4	Isotopes That Produce Delayed Neutrons	653
15.5	Visualizing How Delayed Neutrons Are Produced	655
15.6	Time-Dependent Diffusion Equation without Delayed Neutrons	656
15.7	Finding Simple Solutions to the Time-Dependent Diffusion Equation Using the Separation of Variables Method	656
15.8	Defining the Reactor Period	659
15.9	Understanding the Life Cycle of a Prompt Neutron	661

15.10	Time-Dependent Diffusion Equation with Delayed Neutrons	662
15.11	Finding the Time-Dependent Neutron Flux and Fission Product Concentrations	664
15.12	The Reactor Period and the Reactor Power	667
References		668
	Books and Textbooks	668
	Web References	668
	Additional References	669
	Questions for the Student	670
	Exercises for the Student	671

## CHAPTER 16

### The Point Kinetics Approximation and the Inhour Equation 673

16.1	Deriving the Inhour Equation	673
16.2	Graphical Solutions to the Inhour Equation	677
16.3	Exact Solutions to the Inhour Equation	679
16.4	Reactor Period with Delayed Neutrons	679
16.5	Understanding Time-Dependent Reactor Behavior	681
16.5.1	Normal or Planned Shutdown	681
16.5.2	Emergency Shutdown	682
16.5.3	Prompt Critical Behavior	682
16.6	Conventional Units for Measuring the Reactivity-Dollars and Cents	683
16.7	Deriving the Prompt Jump and the Prompt Drop Approximations	685
16.8	Normal Reactor Behavior and Normal Reactivity Swings	689
16.8.1	Large Positive Reactivity Changes (Increases)	690
16.8.2	Large Negative Reactivity Changes (Decreases)	691
16.8.3	Supercritical Transients	693
16.8.4	Prompt Supercritical Transient	693
16.9	Solutions to the Inhour Equation with Six Delayed Neutron Groups	694
16.10	Time-Dependent Behavior of Fast Reactors	696
16.11	Finding the Asymptotic Reactor Period	696
16.12	Flux and Power Changes Starting from an Arbitrary State	698
16.13	Understanding the Origin of the Term "Inhour"	699
16.14	History of the Inhour Equation and the Unit of the Inhour	700
16.15	Using the Reactor Period to Measure the Worth of a Control Rod	702
16.16	Measuring the Point Kinetics Parameters	702

16.17	Other Applications of the Point Kinetics Equations	703
16.18	Examining the Validity of the Point Kinetics Approximation	703
16.19	Estimating the Instantaneous Reactor Power Level as a Function of Time	704
16.20	Ways to Measure the Point Kinetics Parameters	708
16.21	The Rod Drop Method	708
16.22	The Rod Oscillator Method	709
16.23	The Pulsed Neutron Source Method	710
16.24	Reactor Noise Analysis	711
References		712
	Books and Textbooks	712
	Web References	713
	Additional References	713
	Questions for the Student	714
	Exercises for the Student	716

## CHAPTER 17

### Burnup, Depletion, and Temperature Feedback 719

17.1	Tracking the Burnup of Nuclear Fuel	719
17.2	Factors That Affect the Life of the Fuel	721
17.3	Buildup of Plutonium in the Core	721
17.4	Plutonium Production Rate in a Typical Thermal Water Reactor	723
17.5	Estimating the Amount of Energy Produced from Plutonium in a Thermal Water Reactor Core	723
17.6	Changes to the Isotopic Composition of the Core	724
17.6.1	Burnable Poisons and Other Neutron Poisons	724
17.6.2	Soluble Neutron Poisons and Their Function	724
17.7	Fuel Management and Plant Operation	726
17.8	Power Profiles in Low-Leakage Cores	728
17.9	How Temperature Affects the Reactivity of the Core	731
17.10	Moderator Temperature Coefficient	732
17.11	Effect of Boric Acid on the Moderator Temperature Coefficient	733
17.12	Temperature Feedback with Nucleate or Bulk Boiling	733
17.13	Understanding the Void Coefficient of the Reactivity	734
17.14	The Void Coefficient and Load Following	735
17.15	Understanding the Fuel Temperature Coefficient	737
17.16	Doppler Broadening and Its Effect on the Resonance Escape Probability	737

17.17	Other Factors That Affect the Fuel Temperature Coefficient	740
17.18	Time Dependence of the Core Temperature Coefficients	741
17.19	Regulatory Requirements Governing Sudden Reactivity Changes	742
17.20	Compliance with the Compendium of Federal Regulations and 10 CFR50	743
17.21	Curve-Fitting Methods for Nuclear Data	744
17.22	The Least Squares Method	744
17.23	Power Coefficient of the Reactivity	747
17.24	Finding the Temperature Defect and the Power Defect	749
17.25	Isothermal Temperature Coefficient	749
17.26	Calculating the Power Coefficient during Start-Up	749
17.27	Calculating the Temperature and Power Defects	750
17.28	Control Systems and Thermal Feedback	751
17.29	Temperature Feedback and the TRIGA Reactor	752
17.30	Understanding How a TRIGA Reactor Works	752
17.31	Power Pulses in a TRIGA Reactor	756
17.32	Reviewing the Effects of Thermal and Temperature Feedback	757
17.33	Some Additional Observations regarding Temperature Feedback	757
	References	759
	Books and Textbooks	759
	Web References	759
	Additional References	760
	Questions for the Student	761
	Exercises for the Student	762

## CHAPTER 18

### Long-Term Changes to the Reactivity of the Core 765

18.1	Tracking the Long-Term Reactivity	765
18.2	Core Reactivity as a Function of Burnup	767
18.3	Reactivity Changes in One-, Two-, and Three-Batch Cores	768
18.4	Single-Batch Cores versus Multi-Batch Cores	769
18.5	Reactivity Behavior of an N-Batch Core	771
18.6	Optimizing the Fuel-Loading Pattern within a Given Cycle	774
18.7	Optimizing a Reactor Core	775
18.8	Fuel Assembly-Loading Patterns	776
18.9	Core Power Profile as a Function of Burnup	778
18.9.1	Maintaining the Fuel Pin Temperatures within Established Limits	778

18.10	Axial Zoning Schemes	778
18.11	Burnable Poisons within an Individual Fuel Assembly	779
18.12	Burnable Poisons Inside of Reactor Fuel Assemblies	781
18.13	Effect of Burnable Poisons on the Flux Shape	782
18.14	Mathematical Description of the Depletion Process	782
18.15	Fission Product Buildup	784
18.16	Understanding the Buildup of Xenon-135 and Samarium-149	789
18.17	Equilibrium Concentrations of Xenon-135 and Samarium-149	789
18.18	Behavior of Xenon-135 and Samarium-149 after Shutdown	791
18.19	Xenon Buildup and "Reactor Dead Time"	792
18.20	The Concentration of Samarium-149 after Shutdown	792
18.21	Comparing Fission Product Poisoning in Fast and Thermal Reactors	793
18.22	Yields of Other Important Fission Products	793
18.23	Cumulative Effect of the Fission Product Poisons	794
18.24	Reactivity Change Caused by the Buildup of Fission Products	795
18.25	Cross Section for a Hypothetical Fission Product	797
	References	799
	Books and Textbooks	799
	Web References	800
	Additional References	800
	Questions for the Student	801
	Exercises for the Student	802

## CHAPTER 19

### Fuel Assembly Homogenization and Reaction Rate Conservation 805

19.1	A Closer look at the Neutron Diffusion Equation	805
19.2	Spatial Homogenization of a Reactor Fuel Assembly	807
19.3	Popular Neutron Diffusion Theory Codes and Their Applications	809
19.4	Homogenizing a Spatially Heterogeneous Region of Space	809
19.5	Examples of How the Homogenization Process Works	812
19.6	Fuel Assembly Homogenization and Reactor Super Cells	814

19.7	Some Interesting Relationships between the Size, Shape, and Composition of a Reactor Core	815
19.8	Thermal Disadvantage Factors and Fuel Assembly Homogenization	819
References		819
	Books and Textbooks	819
	Web References	820
	Additional References	820
Questions for the Student		821
Exercises for the Student		824

## CHAPTER 20

### Control Rods, Burnable Poisons, and Chemical Shim 827

20.1	Control Rods and Their Function	827
20.2	Control Rods and Their Origin	828
20.3	Control Rod Designs	830
20.4	Control Rod Materials	834
20.5	Burnable and Nonburnable Poisons	835
20.6	Soluble Neutron Poisons and Chemical Shim	836
20.7	Burnable Poisons within a Fuel Assembly	838
20.8	Burnable Poisons within a Reactor as a Whole	839
20.9	Effect of Burnable Poisons on the Neutron Flux Shape	840
20.10	Burnable Poison Locations in a Reactor Core	841
20.11	Using Soluble Boron (or Solbor) as a Reactor Control System	841
20.12	Reactivity Changes Induced by Control Rods	842
20.13	Reactivity Changes Induced by Chemical Shim	843
20.14	Correlating the Reactivity Change to the Chemical Shim Concentration	844
20.15	Converting from PPM to Grams per Liter	846
20.16	Boric Acid Injection Systems	847
20.17	Comparing PWR and BWR Control Rods	847
20.18	Control Rod Banks and Control Rod Guide Tubes	848
20.19	Origin of the Word SCRAM	850
20.20	Maintaining the Criticality of the Core over Time	851
20.21	Defining the Worth of a Control Rod	853
20.22	Estimating the Effect of a Control Rod on the Reactivity	854
20.23	How the Control Rod Worth Changes When the Flux Shape Changes	856
20.24	Reactivity Corrections to Account for Partially Inserted Control Rods	858

20.25	Effect of the Fuel Type on the Control Rod Worth	862
20.26	Semantic Differences in the Definition of the Control Rod Worth	863
20.27	Effect of Control Rods on the Axial Power Profile	863
20.28	Fast Reactor Control Rods	864
20.29	Control Rod Materials and Their Cross Sections	867
20.30	Control Rod Design Parameters	868
20.31	Reactor Control Systems and Their Limitations	868
20.32	Alternative Forms of Reactivity Control	868
References		870
	Books and Textbooks	870
	Web References	871
	Additional References	871
Questions for the Student		872
Exercises for the Student		874

## CHAPTER 21

### Fission Products, Xenon Transients, and Reactor Accidents 877

21.1	Importance of Fission Product Poisons	877
21.2	Reactivity Changes due to Fission Product Poisons Like Xenon	878
21.3	Xenon Behavior during Start-Up, Equilibrium, and Shutdown	878
21.4	Scenario I: Xenon following Start-Up	879
21.5	Scenario II: Equilibrium Xenon	880
21.5.1	Case 1: A Low Thermal Flux	881
21.5.2	Case 2: A Moderate Thermal Flux	881
21.5.3	Case 3: A High Thermal Flux	881
21.6	Scenario III: Shutdown Xenon	882
21.7	Reactor Dead Time and Its Implications	885
21.8	Nonintuitive Xenon Behavior	886
21.9	Power Control and Demand Management to Avoid Xenon Imbalances in the Core	887
21.10	Reactivity Changes due to Samarium Buildup and Decay	888
21.10.1	Case 1: The Samarium Concentration following Reactor Start-Up	889
21.10.2	Case 2: Equilibrium Samarium	890
21.10.3	Case 3: Samarium after Shutdown	891
21.11	Nuclear Properties of Xenon-135 and Samarium-149	893
21.12	How the Reactor Accident at Chernobyl Occurred	894
21.13	Design Features of the Chernobyl Reactor	895
21.14	Buildup of Xenon in the Chernobyl Core	896
21.15	The Chernobyl Accident and Its Aftermath	897

21.16	Comparing Chernobyl to Other Reactor Accidents	898
21.17	Accident Severity and the INES Scale	899
21.18	Lessons Learned from the Chernobyl Disaster	900
21.19	Computer Programs Used to Model Reactor Transients and Reactor Accidents: TRAC, TRACE, RETRAN, and RELAP	902
21.20	Typical Applications for TRACE	903
21.21	Using Realistic Cross Sections for Xenon and Samarium	906
	References	906
	Books and Textbooks	906
	Web References	906
	Additional References	907
	Questions for the Student	908
	Exercises for the Student	910

## CHAPTER 22

### An Introduction to Neutron Transport Theory 911

22.1	An Introduction to Neutron Transport Theory	911
22.2	Diffusion Theory versus Transport Theory	912
22.3	Diffusion Theory Concepts in Transport Theory Terminology	913
22.4	Deriving the Neutron Transport Equation	917
22.5	Finding the Scattering Rate for an Arbitrary Neutron	919
22.6	Boundary Conditions for the Neutron Transport Equation	920
22.7	Reducing the Transport Equation to a More Conventional Form	920
22.8	Showing When Solutions to the Transport Equation Reduce to Solutions to the Diffusion Equation	922
22.9	Simplifications to Neutron Transport Theory	922
22.9.1	Category I: The Steady-State Transport Equation	923
22.9.2	Category II: The One-Group or One-Speed Transport Equation	923
22.9.3	Category III: The Transport Equation for a Homogeneous Material	923
22.9.4	Category IV: The Transport Equation for a Homogeneous Material with Isotropic Scattering	923
22.9.5	Category V: The Transport Equation with Isotropic Source Terms	924

22.10	Difficulties with Obtaining a Solution to the Neutron Transport Equation	924
22.11	Deriving the Diffusion Theory Approximation	926
22.12	Introducing the $P_N$ and $S_N$ Approximations	929
22.13	$P_N$ Approximation	929
22.14	$S_N$ Approximation	933
22.15	Applying the $S_N$ Method to a Spherical Source	935
22.16	Unit Vector and Dimensional Gradient in More than One Dimension	937
22.17	Numerical Methods for Solving the Time-Dependent Transport Equation	939
22.18	Using the Transport Equation with Pure Scatters and Absorbers	941
22.19	Ray Effects and Their Origin	943
22.20	Multigroup Neutron Transport Equation	944
22.21	How Boundary Conditions Are Handled in Neutron Transport Theory and Neutron Diffusion Theory	946
22.22	Common Types of Neutron Boundary Conditions	946
22.23	Initial Conditions for Time-Dependent Problems	946
22.24	Boundary Conditions at a Material Interface	947
22.25	Vacuum Boundary Conditions	948
22.26	Diffusion Coefficients and the $P_1$ Approximation	950
22.27	Commercial Computer Programs Used to Solve the Neutron Transport Equation	952
22.28	Other Approaches for Solving the Neutron Transport Equation	952
22.29	Visualizing the Angular Neutron Flux	953
	References	954
	Books and Textbooks	954
	Web References	954
	Additional References	954
	Questions for the Student	955
	Exercises for the Student	956

## CHAPTER 23

### The Monte Carlo Method and Its Applications to Nuclear Science and Engineering 959

23.1	An Introduction to the Monte Carlo Method	959
23.2	Random Number Generators and Statistical Probability Distributions	962
23.3	Steps in a Monte Carlo Calculation	966
23.3.1	Step 1: Establish an Initial Direction of Motion and an Initial Particle Energy $E$	966

23.3.2	Step 2: Find the Distance to the First Collision	967
23.3.3	Step 3: Determine the Type of Collision	968
23.3.4	Step 4: Determine the Direction That the Particle Exits the Collision	968
23.3.5	Step 5: Store the Case History for the Particle until It Is Destroyed or Leaves the System	970
23.3.6	Step 6: Repeat the Same Process for the Next Particle	970
23.4	Pros and Cons of Monte Carlo Calculations	971
23.5	Statistical Analysis Phase	971
23.6	The Monte Carlo Method and Moore's Law of Computing	971
23.7	Determining the Error in a Monte Carlo Calculation	973
23.8	Error Reduction Schemes	974
23.9	Computer Programs That Implement the Monte Carlo Method	978
23.10	Monte Carlo Calculation of the Fast Fission Factor	981
23.11	Dealing with a Cylindrical Geometry in a Monte Carlo Simulation	985
23.12	Monte Carlo Calculation of the Resonance Escape Probability	986
23.13	Extensions of the Monte Carlo Method to Control Rods	989
23.14	Skewed Probability Distributions	990
23.15	Finding the Scattering Angles in a Monte Carlo Calculation	991
23.16	Generating Asymmetric Scattering Angles	994
23.17	Using Random Walks to Simulate Particle Diffusion	997
23.18	Generating Truly Random Numbers	999
	References	1002
	Books and Textbooks	1002
	Web References	1002
	Additional References	1002
	Questions for the Student	1003
	Exercises for the Student	1003

## APPENDIX A

### Important Nuclear and Physical Constants 1005

A.1	Physical Constants and Their Values	1005
A.2	Units of Energy and Power	1006
A.3	Relationship between Number of Fissions per Second and Thermal Energy Production	1006
A.4	Time and Decay Conversion Factors and Constants	1006
A.5	Units of the Reactivity	1006

## APPENDIX B

### Unit Systems and Conversion Factors 1007

B.1	Common Unit Systems	1007
B.2	Prefixes, Primary Units, and Derived Units	1007
B.3	Temperature Conversion Formulas	1009

## APPENDIX C

### Nuclear Cross Sections and Reaction Rates 1011

C.1	Nuclear Cross Sections	1011
C.2	Repositories for Nuclear Cross-Section Data	1011
C.3	Tools for Plotting Nuclear Cross-Section Data	1011
C.4	Converting from Microscopic Cross Sections to Macroscopic Ones	1015
C.5	Some Comments on Cross-Section Naming Conventions	1018
C.6	Finding the Neutron Production Rate	1019
C.7	Nuclear Reaction Rates for the Fast and Thermal Energy Groups	1019
C.8	Power Production from Cross-Section Libraries	1021
C.9	Using Non-1/v Correction Factors to Find Thermal Group Cross Sections	1021
C.10	Temperature-Dependent Reaction Rates	1022

## APPENDIX D

### Physical Properties of Important Nuclear Materials 1023

D.1	Physical Properties of Important Nuclear Materials and Their Uses	1023
-----	---	------

## APPENDIX E

### Atomic Mass Tables, Half-Lives, and Natural Abundances 1027

E.1	Atomic Mass Tables, Half-Lives, and Natural Abundances	1027
E.2	Finding the Amount of Energy Released from Table E.1	1027
E.3	Important Fission Products	1033

## APPENDIX F

### Delayed Neutron Emitters and Their Nuclear Properties 1035

F.1	Delayed Neutron Emitting Materials	1035
F.2	Features of Delayed Neutrons	1035
F.3	The Role of Bromine-87	1038

## APPENDIX G

## Attenuation Coefficients for Radiation Shields 1039

- G.1 Types of Attenuation Coefficients and Their Uses 1039
- G.2 Attenuation of a Photon Beam 1041
- G.3 Distinguishing between X-Rays and Gamma Rays 1041

## APPENDIX H

## Diffusion Coefficients, Transport Cross Sections, and Mean Free Paths 1043

- H.1 Neutron Diffusion Coefficient 1043
- H.2 Fick's Law of Diffusion 1043
- H.3 Neutron Diffusion Coefficients for Pure Scatters 1046
- H.4 Finding the Cosine of the Neutron Scattering Angle 1046
- H.5 Reasons for Using the Transport Cross Section Instead of the Total Cross Section 1046
- H.6 Understanding the Mean Free Path 1047
- H.7 The Diffusion Coefficient and the Mean Free Path 1047
- H.8 Typical Values of the Diffusion Coefficient, the Mean Free Path, and the Transport Cross Section for Nuclear Materials 1048
- H.9 The Transport Correction Factor 1048

## APPENDIX I

## Diffusion Parameters for Common Nuclear Materials 1049

- I.1 Reactor Diffusion Parameters 1049

## APPENDIX J

## Common Integrals Used in Nuclear Science and Engineering 1051

- J.1 Common Integrals 1051
- J.2 Definite versus Indefinite Integrals 1051
- J.3 Useful References 1051
- Web References 1052

## APPENDIX K

## Bessel Functions That Appear in the Study of Nuclear Science and Engineering 1053

- K.1 Bessel Functions and Their Origin 1053
- K.2 Types of Bessel Functions 1053
- K.3 Bessel Functions of the First and Second Kind 1053
- K.4 Modified Bessel Functions of the First and Second Kind 1054
- K.5 Using Bessel Functions to Find the Flux Shape in a Bare Cylindrical Reactor 1057
- Web References 1059

## Index 1061
