1 Critical Evaluation of the Use of Surfactants in Capillary Electrophoresis

1

Jessica L. Felhofer, Karin Y. Chumbimuni-Torres, Maria F. Mora, Gabrielle G. Haby, and Carlos D. García

1.1	Introduction	1
1.2	Surfactants for Wall Coatings	4
1.2.1	Controlling the Electroosmotic Flow	4
1.2.2	Preventing Adsorption to the Capillary	5
1.3	Surfactants as Buffer Additives	6
1.3.1	Micellar Electrokinetic Chromatography	6
1.3.2	Microemulsion Electrokinetic Chromatography	8
1.3.3	Nonaqueous Capillary Electrophoresis with Added Surfactants	9
1.4	Surfactants for Analyte Preconcentration	9
1.4.1	Sweeping	10
1.4.2	Transient Trapping	11
1.4.3	Analyte Focusing by Micelle Collapse	12
1.4.4	Micelle to Solvent Stacking	12
1.4.5	Combinations of Preconcentration Methods	12
1.4.6	Cloud Point Extraction	12
1.5	Surfactants and Detection in CE	14
1.5.1	Mass Spectrometry	14
1.5.2	Electrochemical Detection	15
1.6	Conclusions	16
	References	17

2	Sample Stacking: A Versatile Approach for Analyte Enrichment in CE and Microchip-CE	23
	<i>Bruno Perlatti, Emanuel Carrilho, and Fernando Armani Aguiar</i>	
2.1	Introduction	23
2.2	Isotachopheresis	24
2.3	Chromatography-Based Sample Stacking	25
2.4	Methods Based on Electrophoretic Mobility and Velocity Manipulation (Electrophoretic Methods)	26
2.4.1	Field-Enhanced Sample Stacking (FESS)	27
2.4.2	Field-Enhanced Sample Injection (FESI)	27
2.4.3	Large-Volume Sample Stacking (LVSS)	28
2.4.4	Dynamic pH Junction	28
2.5	Sample Stacking in Pseudo-Stationary Phases	29
2.5.1	Field-Enhanced Sample Stacking	29
2.5.2	Hydrodynamic Injection Techniques	30
2.5.2.1	Normal Stacking Mode (NSM)	30
2.5.2.2	Reverse Electrode Polarity Stacking Mode (REPSM)	30
2.5.2.3	Stacking with Reverse Migrating Micelles (SRMM)	30
2.5.2.4	Stacking Using Reverse Migrating Micelles and a Water Plug (SRW)	31
2.5.2.5	High-Conductivity Sample Stacking (HCSS)	31
2.5.3	Electrokinetic Injection Techniques	32
2.5.3.1	Field-Enhanced Sample Injection (FESI-MEKC)	32
2.5.3.2	Field-Enhanced Sample Injection with Reverse Migrating Micelles (FESI-RMM)	32
2.5.4	Sweeping	32
2.5.5	Combined Techniques	33
2.5.5.1	Dynamic pH Junction: Sweeping	33
2.5.5.2	Selective Exhaustive Injection (SEI)	33
2.5.6	New Techniques	33
2.6	Stacking Techniques in Microchips	33
2.7	Concluding Remarks	36
	References	37

3.1	Introduction	41
3.2	Injection Techniques in CE	42
3.2.1	Hydrodynamic Sample Injection	43
3.2.1.1	Principle	43
3.2.1.2	Advantages and Performance	44
3.2.1.3	Disadvantages	44
3.2.2	Electrokinetic Sample Injection	44
3.2.2.1	Principle	44
3.2.2.2	Advantages and Performance	45
3.2.2.3	Disadvantages	45
3.2.3	Bias-Free Electrokinetic Injection	45
3.2.4	Extraneous Sample Introduction Accompanying Injections in CE	46
3.2.5	Sample Stacking	48
3.2.5.1	Principle	48
3.2.5.2	Advantages and Performance	49
3.2.5.3	Disadvantages	50
3.2.6	Alternative Batch Sample Injection Techniques	50

3.2.6.1	Rotary-Type Injectors for CE	50
3.2.6.2	Hydrodynamic Sample Splitting as Injection Method for CE	51
3.2.6.3	Electrokinetic Sample Splitting as Injection Method for CE	52
3.2.6.4	Dual-Opposite End Injection in CE	52
3.3	Micromachined/Microchip Injection Devices	53
3.3.1	Droplet Sampler Based on Digital Microfluidics	53
3.3.2	Wire Loop Injection	54
3.4	Automated Flow Sample Injection and Hyphenated Systems	55
3.4.1	Introduction	55
3.4.2	Advantages and Performance	56
3.4.3	Disadvantages	57
3.5	Computerized Sampling and Data Analysis	57
3.6	Sampling in Portable CE Instrumentation	58
3.7	Quantitative Analysis in CE	59
3.7.1	Introduction	59
3.7.2	Quantitative Analysis with HD Injection	59
3.7.3	Quantitative Analysis with EK Injection	60
3.7.4	Validation of the Developed CE Methods	61
3.7.5	Computer Data Treatment in Quantitative Analysis	61
