

Contents

Foreword	5
Jiří Hřebíček, Jiří Holčík	
LECTURES	7
Solving least squares problems	9
Walter Gander	
Modeling infectious diseases in humans and animals	21
Luděk Berec	
Spatio-temporal modelling of air pollution	76
Daniela Cocchi, Francesca Bruno, Fedele Greco, Carlo Trivisano	
Exact vectorization of a bitmap in biological modelling	86
Stanislav Bartoň	
Stochastic modelling of signal transduction in olfactory neurons	97
Ondřej Pokora	
Stochastic modeling of biodiversity: f-diversity, self f-diversity and marginal f-diversity	108
Jana Zvárová and Karel Zvára	
Deterministic models of natural selection and their relation to ecology	120
Zdeněk Pospíšil	
COMPUTATIONAL BIOLOGY STUDENTS' ABSTRACTS	149
Gene prediction from non-annotated sequences	151
Michaela Bayerlová	
Mathematical modelling of biodegradable processes	152
Anna Gardavská	
Enabling pathway analysis - connecting genomic experiments and gene ontology databases	153
Hana Imrichová	
Creation of a single initiation application with GUI generated by MATLAB	154
Pavčina Krečmerová	

Changes in long time monitoring of macrozoobenthos in the Czech Republic Simona Littnerová	155
Population history of viruses causing rabies Jiří Moravec	157
Computational simulation of environmental pollution using Maple Markéta Novotná	158
Bioclimatic modelling Roman Richard Štěrbá	160
Evaluation of stress test ECG signal parameters in horses Jana Svačinová	161
The application of clustering methods on data of clinical registries Hana Švihálková	162
Acquiring knowledge on anticancer chemotherapy from health insurance claims data Alena Zofáková	163
