1	The DETAIL project	1
2	Water Framework Directive (WFD).....	2
3	Basic rules for revitalizing small streams	8
3.1	Revitalization of small streams, and what we should expect from it.....	8
3.2	Characteristics of natural water courses	9
3.3	Goals and principles for training small streams.....	10
3.4	Consequences of training small streams	11
3.5	Principles for revitalizing small streams	12
3.6	Historical periods in the development of revitalization	13
3.7	Recent guidelines for the design of small stress revitalization projects	19
3.8	Recent problems of revitalization.....	21
3.9	Relations between stream revitalization and flood protection	22
3.10	Conclusions	23
4	International coordination of WFD Implementation – Tasks and Challenges.....	24
4.1	Introduction	24
4.1.1	Reasons, aims, regulations	24
4.1.2	Common Implementation Strategy (CIS):	26
4.2	International Commissions	26
4.2.1	International Commission for the Protection of the Rhine River (IKSR)	26
4.2.2	International Commission for the Protection of the Moselle and Saar River (IKSMS) 27	
4.2.3	International Commission for the Protection of the Maas River (IMK)	27
4.2.4	International Commission for the Protection of the Elbe River (IKSE).....	27
4.2.5	International Commission for the Protection of the Oder River (IKSO).....	29
4.2.6	International Commission for the Protection of the Danube River (IKSD)	30
4.2.7	International Boundary Water Commissions	30
4.3	Implementation of WFD in the Elbe River Basin	31
5	Technical guidelines for designing the revitalization of small streams	35
5.1	Trace of the channel	35

5.2	Level of the stream bottom (vertical alignment of the bottom of the stream)	36
5.3	The cross section of the stream channel	37
5.4	Assessing the stability of a revitalized stream channel	42
5.4.1	The non-scouring velocities method (safe velocity).....	42
5.4.2	Critical shear stress method	44
5.5	Design of stabilization	47
6	Excursion guide – List of revitalization catalogue cards.....	49
