 Introduction	 1
PREM S. FRY AND COREY L. M. KEYES	
1 Sources of human life-strengths, resilience, and health	15
PREM S. FRY AND DOMINIQUE L. DEBATS	
2 Growth is not just for the young: growth narratives, eudaimonic resilience, and the aging self	60
JACK J. BAUER AND SUN W. PARK	
3 Physical resilience and aging: correcting the Tithonus error and the crème brûlée error	90
AUBREY D. N. J. DE GREY	
4 You can teach an old dog new tricks: harnessing neuroplasticity after brain injury in older adults	104
GITENDRA USWATTE AND EDWARD TAUB	
5 Resilience in the face of cognitive aging: experience, adaptation, and compensation	130
CHRISTOPHER HERTZOG AND DANIELA S. JOPP	
6 Why do some people thrive while others succumb to disease and stagnation? Personality, social relations, and resilience	162
MARGARET L. KERN AND HOWARD S. FRIEDMAN	
7 Psychosocial resources as predictors of resilience and healthy longevity of older widows	185
PREM S. FRY AND DOMINIQUE L. DEBATS	

8	Resilience and longevity: expert survivorship of centenarians	213
	PETER MARTIN, MAURICE MACDONALD, JENNIFER MARGRETT, AND LEONARD W. POON	
9	The socioemotional basis of resilience in later life	239
	ANTHONY D. ONG AND C. S. BERGEMAN	
10	Emotional resilience and beyond: a synthesis of findings from lifespan psychology and psychopathology	258
	EVA-MARIE KESSLER AND URSULA M. STAUDINGER	
11	Risk, resilience, and life-course fit: older couples' encores following job loss	283
	PHYLLIS MOEN, STEPHEN SWEET, AND RACHELLE HILL	
12	Resilience in mobility in the context of chronic disease and aging: cross-sectional and prospective findings from the University of Alabama at Birmingham (UAB) Study of Aging	310
	PATRICIA SAWYER AND RICHARD M. ALLMAN	
13	Positive aging: resilience and reconstruction	340
	KENNETH J. GERGEN AND MARY GERGEN	
	<i>Index</i>	357

Figures

1.1 Schematic representation of the major sources of life-strengths from different theoretical perspectives	page 21
2.1 Conceptualizations of the aging, narrative self in relation to hedonic and eudaimonic resilience	62
2.2 Growth – or at least gain – is not just for the young. This figure approximates the findings across several studies reported in Ebner <i>et al.</i> (2006), Heckhausen (1997), and Ogilvie <i>et al.</i> (2001)	63
4.1 Changes in real-world use of the arm on the side of the body more affected by stroke after CI therapy and a placebo control procedure	112
4.2 Model of the development of learned nonuse	115
4.3 Cortical surface-rendered images of grey matter change. Grey matter increases displayed on a standard brain for (a) participants who received CI therapy and (b) those who did not	117
5.1 Top panel: Depiction of zone of possible cognitive development across the adult lifespan for a given individual Bottom panel: Depiction of four possible developmental curves for a single individual, with different trajectories resulting as a function of interactions among behavioral, environmental and genetic factors that permit vertical movement within the zone at different points in the lifespan	138
6.1 Pathways linking personality and health outcomes	167
6.2 Probability of dying at a given age by life satisfaction and parental divorce status	172
6.3 Interaction of childhood conscientiousness and adult career success on mortality risk, for men	175
7.1 Survival of widows in the groups with high and low scores for <i>Spirituality</i> over approximately 6.5 years	196

7.2 Survival of widows in the groups with high and low scores for <i>family stability</i> , over approximately 6.5 years	197
7.3 Survival of widows in the groups with high and low scores for <i>social engagement</i> , over approximately 6.5 years	197
7.4 Survival of widows in the groups with high and low scores for <i>commitment to life tasks</i> , over approximately 6.5 years	198
7.5 Survival of widows in the groups with high and low scores for <i>control trait</i> , over approximately 6.5 years	199
7.6 Survival of widows in the groups with high and low scores for <i>challenge trait</i> , over approximately 6.5 years	200
8.1 Georgia Adaptation Model (reprinted with permission)	216
8.2 Mediation model of negative life events, competence, and negative affect	221
8.3 Mediation model of perceived economic status, ADL impairment, and negative affect	232
9.1 The relationship between daily stress and negative affect as a function of positive affect	243
9.2 The relationship between daily conjugal stress and negative affect as a function of positive affect	244
9.3 The relationship between daily negative affect and systolic pressure as a function of social connectedness	248
9.4 A damped linear oscillator model with parameters (a) damping, (b) 1/frequency (days/cycle, which is sometimes called the period of the cycle or the wavelength), (c) amplitude, and (d) trend	249
9.5 Emotional well-being of two widows, in which a higher score indicates better well-being	251
11.1 Risk, resilience, and life-course fit: a model of toxic ecologies, strategic adaptations, and encores	286
12.1 Difficulty in walking among community-dwelling older adults	311
12.2 Distribution of life-space scores	315
12.3 The UAB Study of Aging	324
12.4 Mortality over 4 years	330

Tables

7.1	Baseline characteristics of participants who survived (survivors) or died (decedents)	<i>page</i> 193
7.2	A: Psychometric information on psychosocial resource factors and psychological resilience trait measures B: Relative risk of death associated with psychosocial resource factors and psychological resilience trait measures	195
7.3	Relative risk of death associated with psychosocial resource factors and resilience traits after adjusting for three covariates entered in the multiple regression analysis	201
8.1	Cross-tabulation of stressful life events and mental health outcome	219
8.2	Cross-tabulation of educational attainment and cognitive status outcome	226
8.3	Cross-tabulation of cognitive status and activities of daily living outcome	227
8.4	Cross-tabulation of social interactions and activities of daily living outcome	230
8.5	Cross-tabulation of perceived economic status and activities of daily living outcome	230
10.1	Overview of facets of emotional functioning and measurement indicators	261
11.1	Characteristics of older working couples experiencing a job loss	291
11.2	Resilience measures assessing change among older working couples experiencing a job loss	293
12.1	Odds ratios for resilient life-space at baseline	325
12.2	Odds ratios for resilient life-space at 4 years	327
