

CONTENTS

PREFACE	11
<i>“Integrated Fire Engineering and Response”</i>	11
WG1	13
FIRE BEHAVIOUR AND FIRE SAFETY	14
<i>Overview</i>	14
<i>Fire scenarios</i>	14
<i>Design Fires</i>	15
<i>Fire evolution, propagation, suppression (active measures)</i>	16
<i>Compartment energy balance</i>	16
<i>Smoke control</i>	17
<i>Tenability conditions</i>	18
<i>People evacuation</i>	19
<i>Rescue and intervention</i>	19
OBJECTIVES OF FIRE SAFETY	20
<i>Basic Definition of Fire Growth</i>	21
REVIEW OF DESIGN FIRES IN BUILDINGS	23
<i>Fire load survey of commercial premises in Finland</i>	23
<i>Design fires for fire safety engineering</i>	23
<i>Fire load distributions in the program to prevent fatal events in fire</i>	24
<i>Fire load survey and statistical analysis</i>	24
<i>Fire load survey of historic buildings: A case study</i>	24
<i>Determining design fires for design-level and extreme events</i>	25
<i>Medium-scale fire experiments of commercial premises</i>	25
<i>A pilot survey of fire loads in Canadian homes</i>	25
<i>Literature review on design fires</i>	26
<i>Fire loads in office buildings</i>	26
<i>Fire load in residential buildings</i>	26
<i>Fire loads in apartments of block of flats</i>	27
DESIGN FIRES: PERFORMANCE-BASED DESIGN IN FIRE AND STRUCTURES	28
<i>Design Fire Scenarios</i>	28
<i>Design Fires</i>	29
<i>Heat transfer from fire to structure</i>	31
PROCEDURAL METHOD OF APPLICATION OF ENGINEERING METHODS IN GERMANY	32
<i>Introduction</i>	32

<i>Fulfillment of safety targets</i>	32
<i>Structural fire safety design with Eurocodes</i>	33
<i>Annex AA</i>	33
<i>Annex BB</i>	35
<i>Annex CC</i>	36
<i>Realised Projects</i>	36
<i>Summary</i>	37
TRAVELLING FIRES IN LARGE COMPARTMENTS	38
DESIGN FIRES: PROBABILISTIC APPROACH	44
<i>Overview</i>	44
<i>Statistical distribution of fire load</i>	44
<i>Fire loads</i>	44
<i>Design fire</i>	45
<i>Risk of ignition</i>	45
<i>Mathematical models</i>	45
<i>Safety levels</i>	46
SOME LIMITS TO COMPUTATIONAL MODELLING OF ENCLOSURE FIRE DYNAMICS	47
<i>The Dalmarnock Fire Tests</i>	47
<i>Round-Robin Study</i>	49
<i>Comparison and analysis of the results</i>	49
<i>Discussion and Conclusions</i>	50
NOTE ON DESIGN FIRES IN STRUCTURES, COMPARTMENTS AND TUNNELS	52
<i>Heat release rate in EN 1991-1-2</i>	52
<i>Heat release rate and fuel packages</i>	52
<i>Heat release rate in road tunnel fires</i>	53
SMOKE CONTROL	54
<i>Smoke hazard</i>	54
<i>Smoke management system: objective and principles</i>	54
<i>Fire plumes</i>	55
<i>Design tools</i>	55
<i>Zone models</i>	55
<i>Computational fluid dynamics (CFD) models</i>	56
TENABILITY CONDITIONS	57
<i>Toxic species in fire gas effluents</i>	57
<i>Assessment of toxic hazards.</i>	57

<i>Toxic Gases in simulated aircraft interior fires using FTIR analysis</i>	57
<i>FTIR Investigations of Toxic Gases in Air Starved Enclosed Fires</i>	58
<i>Toxic Gas Measurements Using FTIR for Combustion of COH Materials in Air Starved Enclosed Fires</i>	58
<i>Thermal behaviour and toxic emissions of flame retarded timber in Fire enclosure tests</i>	58
<i>Thermal behaviour and toxic emissions of various timbers in Cone Calorimeter tests</i>	59
<i>Thermal behaviour and toxic emissions of flame retarded timbers in Cone Calorimeter tests</i>	59
THE HEAT TRANSFER ALONG A STEEL BAR	60
<i>Statement of the problem</i>	60
<i>The mesh</i>	60
<i>The protection</i>	60
<i>Boundary conditions</i>	61
<i>In-depth results</i>	61
<i>Conclusions</i>	69
FIRE RESEARCH AT UNIVERSITAT POLITÈCNICA DE CATALUNYA - EPSEB	70
<i>Passive protection under fire</i>	70
<i>Building-façade geometry and its impact on fire propagation</i>	70
<i>RAILCEN project: Evolution of fire in a railway vehicle</i>	71
FIRE RESEARCH AT THE TECHNICAL UNIVERSITY OF OSTRAVA	72
<i>Tools on risk assessment methods for fire safety engineering</i>	72
<i>Verification of fire safety in road tunnels</i>	72
<i>Appendix</i>	74
OVERVIEW OF THE PRINCIPLES OF HEAT TRANSFER	74
<i>Heat</i>	74
<i>Specific Heat</i>	74
<i>Temperature</i>	75
<i>Internal Energy</i>	75
<i>First Law of Thermodynamics</i>	75
<i>System Work</i>	76
<i>Heat Conduction</i>	76
<i>Heat Convection</i>	77
<i>Heat Radiation</i>	78
<i>Heat Transfer by Vaporization</i>	78
<i>Heat of Vaporization</i>	78
WG2	79
GLOBAL MODELLING OF FIRE-AFFECTED STRUCTURES	80

<i>Modelling the Cardington Tests</i>	80
<i>Modelling the Collapse of Fire-affected Structures</i>	80
<i>Development of Material Models</i>	81
FULLY COUPLED TEMPERATURE-DISPLACEMENT ANALYSES OF STEEL STRUCTURES UNDER FIRE	82
<i>Motivation</i>	82
<i>Methodology</i>	82
<i>Application</i>	82
<i>Further developments</i>	83
METHODOLOGY FOR THE ROBUSTNESS ASSESSMENT OF STRUCTURES SUBJECTED TO FIRE FOLLOWING EARTHQUAKE THROUGH A PERFORMANCE-BASED APPROACH.	84
<i>Motivation</i>	84
<i>Methodology</i>	84
<i>Application</i>	84
<i>Further developments</i>	85
FIRE SAFETY ENGINEERING FOR BUILDINGS AND OPEN CAR PARKS.	87
<i>Research significance</i>	87
<i>Case study: Office Building</i>	87
<i>Results</i>	87
<i>Case study: Open Car Park</i>	88
<i>Application to a real case</i>	88
EXPERIMENTAL FIRE TESTS ON CONCRETE SLABS REINFORCED WITH FRP BARS	90
<i>Research significance</i>	90
<i>Experimental program</i>	90
<i>Experimental results</i>	91
<i>Further developments</i>	91
FIRE ANALYSES OF COMPOSITE STEEL-CONCRETE FRAMES	93
<i>Research significance</i>	93
<i>Parametric Analysis</i>	93
<i>Results Discussion</i>	94
<i>Future developments</i>	95
FIRE TESTS AND INVESTIGATION ON BUILDING MATERIALS AND STRUCTURES	96
<i>Investigation of material properties at elevated temperature - Heat effect by natural building materials as stones and adobe</i>	96
BEHAVIOUR OF R/C SECTIONS, ELEMENTS AND STRUCTURES EXPOSED TO FIRE	98
FIRE AFTER EARTHQUAKE	100

FINITE ELEMENT MODELLING OF LAP SHEAR RIVETED CONNECTIONS IN FIRE	101
COMPUTER SIMULATIONS OF STRUCTURES IN FIRE - VERIFICATION AND VALIDATION	103
<i>Verification</i>	103
<i>Validation</i>	103
<i>Validation and calibration</i>	104
BEHAVIOR OF RC ELEMENTS IN CASE OF FIRE	106
<i>Behaviour of RC beams under different fire scenarios</i>	106
<i>Coupled Thermal - Stress Analysis</i>	106
<i>Axial Restraint Effects on Fire Resistance of RC Beams</i>	107
FIRE FOLLOWING EARTHQUAKE	108
<i>Post-earthquake fire resistance of steel and composite steel-concrete frames</i>	108
BEHAVIOUR OF ALUMINIUM ALLOY STRUCTURES UNDER FIRE	110
<i>Research significance</i>	110
<i>Mechanical features of aluminium alloys at high temperatures</i>	110
<i>Proposal of stress-strain relationships for aluminium alloys at high temperatures</i>	110
STEEL COLUMNS IN FIRE	113
<i>Behaviour of steel columns in fire</i>	113
<i>Simplified analytical procedures</i>	113
<i>Experimental studies</i>	114
<i>Numerical analyses</i>	115
LARGE SCALE FIRE TESTS	118
<i>Sprinklers and unprotected steel test</i>	118
<i>Office compartment demonstration test</i>	118
<i>Open car parks test</i>	118
<i>Cardington laboratory</i>	119
<i>Cardington steel framed building</i>	119
<i>Cardington concrete framed building</i>	120
<i>Cardington timber framed building</i>	120
<i>Steel frame connections temperatures and forces</i>	121
<i>Composite floor 12 x 18 m to collapse</i>	121
<i>Composite unprotected floor 8.735 x 6.6 m</i>	121
<i>Composite unprotected floor 6.6 x 8.4 m</i>	122
<i>Composite floor with cellular beams 15 x 9 m</i>	122
STEEL BEAM-COLUMN UNDER THERMAL GRADIENT	123

<i>Combined axial-bending capacity of steel double-T cross-sections subjected to non-uniform temperature distribution</i>	123
<i>Determination of the K1 increasing factors of the stress-strain relationship for steel double-T cross sections subjected to non-uniform temperature distribution</i>	124
A SCIENTIFIC APPROACH TO BEHAVIOUR OF INTUMESCENT PAINTS	125
FIRE BEHAVIOUR OF BOLTED CONNECTIONS	127
<i>Behaviour of high strength bolts in fire</i>	127
<i>Behaviour of slim-floor-beams in fire</i>	127
<i>Fire behaviour of connections consisting of high strength bolts</i>	128
<i>Fire performance of external semi rigid composite joints</i>	128
PREDICTION OF TEMPERATURES IN STEEL CONNECTIONS	129
<i>Methods for predicting connection temperatures</i>	129
<i>Temperatures of header plate connections during fire test on steel framed building at Mittal Steel Ostrava</i>	129
<i>Temperatures of connections partially encased in the concrete slab during the Mokrsko fire test</i>	130
<i>Temperatures in unprotected joints between steel beams and CFT columns</i>	130
NONLINEAR FINITE ELEMENT ANALYSIS OF RC STRUCTURES SUBJECTED TO FIRE	131
<i>Residual concrete strength after fire action</i>	132
<i>Fire after earthquake</i>	132
GLOBAL MODELLING OF THE BEHAVIOUR OF FRAMED BUILDINGS IN FIRE	134
<i>Vulcan software</i>	134
<i>Static/Dynamic analysis for structural robustness modelling in fire</i>	134
<i>Modelling localisation of tensile cracking of concrete slabs in fire</i>	135
<i>Component-based modelling for connection robustness in fire</i>	135
EXPERIMENTAL STUDIES OF STEEL CONNECTIONS IN FIRE	138
<i>Moment-rotation-temperature characteristics of endplate connections</i>	138
<i>Testing of connections under combined moment, shear and tying forces</i>	138
<i>Robustness in fire of connections to composite columns</i>	139
THERMAL AND STRUCTURAL BEHAVIOUR OF CONCRETE SLABS AT HIGH TEMPERATURES	140
PERFORMANCE OF CELLULAR COMPOSITE FLOOR BEAMS UNDER FIRE CONDITIONS	141
FIRE RESISTANCE OF COMPOSITE PARTIALLY FIRE PROTECTED FLOOR	142
<i>Analytical unrestrained slab panel model</i>	142
<i>Analytical zone model</i>	142
<i>Advanced modelling of membrane action</i>	143
<i>Design tool for membrane action in fire</i>	143

FIRE RESEARCH AT THE LABORATORY OF STRUCTURAL ANALYSIS AND DESIGN, DEPARTMENT OF CIVIL ENGINEERING, UNIVERSITY OF THESSALY	145
<i>Numerical simulation of the behavior of steel and composite structures under fire conditions after earthquake events</i>	145
<i>Numerical analysis of the behaviour of structural elements at elevated temperatures</i>	145
<i>Definition of the requirements for the combined action of fire after earthquake</i>	145
<i>Fire design and analysis of model structures for the combined scenarios of fire after earthquake</i>	145
<i>Behaviour of composite slabs in elevated temperatures</i>	146
FIRE RESEARCH AT THE UNIVERSITY OF COIMBRA	147
<i>Behaviour of beam-to-column steel joints under natural fire</i>	147
<i>Fire resistance of steel and composite steel-concrete columns in buildings</i>	148
<i>Robustness of open car parks under localised fire</i>	149
<i>Composite joints for improved fire robustness</i>	150
RESEARCH IN THE FIELD OF STRUCTURAL FIRE SAFETY ENGINEERING AT ETH ZURICH	151
<i>Stability behavior of steel structures in fire</i>	151
<i>Fire safety of multi-storey timber buildings</i>	152
STRUCTURAL FIRE ENGINEERING RESEARCH AT THE UNIVERSITY OF MANCHESTER	156
<i>Main areas of expertise:</i>	156
<i>Post-flashover fire dynamics</i>	156
<i>Heat transfer analysis</i>	156
<i>Thermal and mechanical properties of construction materials at elevated temperatures</i>	157
<i>Behaviour of steel, concrete and composite structures in fire</i>	158
<i>Tensile membrane action</i>	160
<i>Catenary action</i>	160
<i>Behaviour of joints in fire</i>	161
<i>Concrete filled tubular columns</i>	162
<i>Behaviour of thin-walled steel structures</i>	162
<i>Dissemination and education</i>	163
FIRE RESEARCH AND DESIGN AT THE "POLITEHNICA" UNIVERSITY OF TIMISOARA, ROMANIA	164
<i>Fire after earthquake</i>	164
<i>Numerical modelling of membrane action of composite slabs in fire situation</i>	165
FIRE RESEARCH IN POLAND	166
<i>General division</i>	166
<i>State Institutions</i>	166
<i>Universities and Academia</i>	166
<i>Research Units</i>	167

<i>Others</i>	167
RECENT FIRE SAFETY RESEARCH AT THE CHAIR FOR METAL STRUCTURES, TECHNISCHE UNIVERSITÄT MÜNCHEN	169
<i>Utilisation of Membrane action for Fire Design of Composite-Beam-Slab-Systems</i>	169
<i>Intumescent Coating Systems on Steel Columns in Interaction with Industry Claddings</i>	169
<i>Patch Loading under Fire Conditions</i>	169
PRACTICAL ACTIVITY OF FIRE ENGINEERING AROUND PROBLEMATIC OF EUROCODES IN SLOVAK REPUBLIC.	170
Official standpoint Ministry of interior Slovak Republic for Fire resistance of building structures in the Slovak republic under Eurocodes:	170
<i>Results:</i>	171
<i>Next subsidiary results:</i>	171
FIRE RESEARCH AT THE UNIVERSITY OF COIMBRA	173
<i>Behaviour of beam-to-column steel joints under natural fire</i>	173
<i>Fire resistance of steel and composite steel-concrete columns in buildings</i>	174
<i>Robustness of open car parks under localised fire</i>	175
<i>Composite joints for improved fire robustness</i>	176
WG3	177
WG3 INTRODUCTION	178
<i>1. Building Regulations</i>	178
<i>2. Design Codes</i>	178
<i>3. Approvals process</i>	179
<i>4. Insurance companies</i>	180
<i>5. Qualification requirements for designers</i>	180
<i>6. Precedence of performance-based fire engineering projects</i>	180
<i>7. Passive fire protection</i>	181
<i>Responses:</i>	181
BUILDING REGULATIONS	182
<i>Question 1.1: Prescriptive or performance-based</i>	182
<i>Answers:</i>	182
<i>Question 1.2: Relevant Building Regulations</i>	184
<i>Answers:</i>	184
<i>Question 1.3: Additional guidance</i>	187
<i>Answers:</i>	187
<i>Question 1. 4: Different regulations for certain types of buildings</i>	189
<i>Answers:</i>	189
DESIGN CODES	193

<i>Question 2.1a: Relevant national or international/European standards - Means of escape</i>	193
<i>Answers:</i>	193
<i>Question 2.1b: Relevant national or international/European standards - Smoke management</i>	195
<i>Answers:</i>	195
<i>Question 2.1c: Relevant national or international/European standards - Fire resistance of the construction</i>	197
<i>Answers:</i>	197
<i>Question 2.1d: Relevant national or international/European standards - Fire fighting</i>	199
<i>Answers:</i>	199
<i>Question 2.1e: Relevant national or international/European standards - Fire safety systems (alarm, suppression, ...)</i>	201
<i>Answers:</i>	201
<i>Question 2.2: Use of Eurocodes or other international fire standards</i>	205
<i>Answers:</i>	205
<i>Question 2.3: Translations of the fire parts of Eurocodes</i>	206
<i>Answers:</i>	206
<i>Question 2.4: National annexes</i>	209
<i>Answers:</i>	209
APPROVALS PROCESS	210
<i>Question 3.1: Route to get a project approved</i>	210
<i>Answers:</i>	210
<i>Question 3.2: Fire brigade in the process</i>	212
<i>Answers:</i>	212
<i>Question 3.3: Third party review</i>	214
<i>Answers:</i>	214
<i>Question 3.4: Alternative route of approvals for performance-based design</i>	215
<i>Answers:</i>	215
<i>Question 3.5: Time frame for the approvals process</i>	217
<i>Answers:</i>	217
<i>Question 3.6: Level of information needed</i>	219
<i>Answers:</i>	219
<i>Question 3.7: Specific facilitators</i>	220
<i>Answers:</i>	220
INSURANCE COMPANIES	221
<i>Question 4.1: Involvement</i>	221
<i>Answers:</i>	221
<i>Question 4.2: Discussion with insurance companies</i>	223
<i>Answers:</i>	223

QUALIFICATION REQUIREMENTS FOR DESIGNERS	225
<i>Question 5.1: Certificates/licenses requirements</i>	225
<i>Answers:</i>	225
<i>Question 5.2: Specific design licenses</i>	227
<i>Answers:</i>	227
<i>Question 5.3: Licence holder</i>	228
<i>Answers:</i>	228
<i>Question 5.4 - Specific insurance</i>	229
<i>Answers:</i>	229
PRECEDENCE OF PERFORMANCE-BASED FIRE ENGINEERING PROJECTS	230
<i>Question 6.1: Project details</i>	230
<i>Answers:</i>	230
<i>Question 6.2: Performance-based</i>	232
<i>Answers:</i>	232
<i>Question 6.3: Used techniques</i>	233
<i>Answers:</i>	233
<i>Question 6.4: Approvals route</i>	235
<i>Answers:</i>	235
PASSIVE FIRE PROTECTION	236
<i>Question 7.1: Product approvals</i>	236
<i>Answers:</i>	236
INDEX OF AUTHORS	238
