

Contents

Preface vii

Chapter 1 Introduction 1

- 1.1 What This Book Is About 1
- 1.2 What This Book Is Not About 3
- 1.3 What You Need to Know 3
- 1.4 Computing 4
- 1.5 References 4

Chapter 2 Binary Logistic Regression with PROC LOGISTIC: Basics 7

- 2.1 Introduction 7
- 2.2 Dichotomous Dependent Variables: Example 8
- 2.3 Problems with Ordinary Linear Regression 10
- 2.4 Odds and Odds Ratios 15
- 2.5 The Logistic Regression Model 17
- 2.6 Estimation of the Logistic Model: General Principles 19
- 2.7 Maximum Likelihood Estimation with PROC LOGISTIC 21
- 2.8 Interpreting Coefficients 26
- 2.9 CLASS Variables 29
- 2.10 Multiplicative Terms in the MODEL Statement 36

Chapter 3 Binary Logistic Regression: Details and Options 39

- 3.1 Introduction 40
- 3.2 Confidence Intervals 40
- 3.3 Details of Maximum Likelihood Estimation 42
- 3.4 Convergence Problems 46
- 3.5 Multicollinearity 60
- 3.6 Goodness-of-Fit Statistics 63
- 3.7 Statistics Measuring Predictive Power 68
- 3.8 ROC Curves 72
- 3.9 Predicted Values, Residuals, and Influence Statistics 81
- 3.10 Latent Variables and Standardized Coefficients 87
- 3.11 Probit and Complementary Log-Log Models 91
- 3.12 Unobserved Heterogeneity 97

- 3.13 Sampling on the Dependent Variable 103
- 3.14 Plotting Effects of Predictor Variables 105

Chapter 4 Logit Analysis of Contingency Tables 109

- 4.1 Introduction 109
- 4.2 A Logit Model for a 2×2 Table 110
- 4.3 A Three-Way Table 114
- 4.4 A Four-Way Table 116
- 4.5 A Four-Way Table with Ordinal Explanatory Variables 122
- 4.6 Overdispersion 129

Chapter 5 Multinomial Logit Analysis 139

- 5.1 Introduction 139
- 5.2 Example 140
- 5.3 A Model for Three Categories 141
- 5.4 Estimation with PROC LOGISTIC 143
- 5.5 Estimation with a Binary Logit Procedure 152
- 5.6 General Form of the Model 153
- 5.7 Contingency Table Analysis 154
- 5.8 Problems of Interpretation 157

Chapter 6 Logistic Regression for Ordered Categories 159

- 6.1 Introduction 159
- 6.2 Cumulative Logit Model: Example 160
- 6.3 Cumulative Logit Model: Explanation 163
- 6.4 Cumulative Logit Model: Practical Considerations 167
- 6.5 Cumulative Logit Model: Contingency Tables 171
- 6.6 Adjacent Categories Model 177
- 6.7 Continuation Ratio Model 180

Chapter 7 Discrete Choice Analysis 189

- 7.1 Introduction 189
- 7.2 Chocolate Example 190
- 7.3 Model and Estimation 194
- 7.4 Travel Example 197
- 7.5 Other Applications 205
- 7.6 Ranked Data 206
- 7.7 More Advanced Models with PROC MDC 209

Chapter 8 Logit Analysis of Longitudinal and Other Clustered Data 217

- 8.1 Introduction 217**
- 8.2 Longitudinal Example 218**
- 8.3 Robust Standard Errors 222**
- 8.4 GEE Estimation with PROC GENMOD 226**
- 8.5 Mixed Models with GLIMMIX 234**
- 8.6 Fixed-Effects with Conditional Logistic Regression 240**
- 8.7 Postdoctoral Training Example 244**
- 8.8 Matching 250**
- 8.9 Comparison of Methods 259**
- 8.10 A Hybrid Method 260**

Chapter 9 Regression for Count Data 265

- 9.1 Introduction 265**
- 9.2 The Poisson Regression Model 266**
- 9.3 Scientific Productivity Example 267**
- 9.4 Overdispersion 272**
- 9.5 Negative Binomial Regression 275**
- 9.6 Adjustment for Varying Time Spans 278**
- 9.7 Zero-Inflated Models 283**

Chapter 10 Loglinear Analysis of Contingency Tables 291

- 10.1 Introduction 291**
- 10.2 A Loglinear Model for a 2×2 Table 292**
- 10.3 Loglinear Models for a Four-Way Table 298**
- 10.4 Fitting the Adjacent Categories Model as a Loglinear Model 304**
- 10.5 Loglinear Models for Square, Ordered Tables 310**
- 10.6 Marginal Tables 317**
- 10.7 The Problem of Zeros 319**
- 10.8 GENMOD versus CATMOD 324**
