

C O N T E N T S

Series Introduction 5

Acknowledgments 7

1. The Linear Probability Model 9

- 1.0 Introduction 9
- 1.1 Review of the Multivariate, Linear Regression Model 10
- 1.2 A Dichotomous Dependent Variable and the Linear Probability Model 12
- 1.3 A Dichotomous Response Variable with Replicated Data 20
- 1.4 Polytomous or Multiple Category Dependent Variables 22
- 1.5 The Linearity Assumption 24
- 1.6 The Effect of an Incorrect Linearity Assumption 27

2. Specification of Nonlinear Probability Models 30

- 2.0 Introduction 30
- 2.1 The General Problem of Specification 30
- 2.2 Alternative Nonlinear Functional Forms for the Dichotomous Case 31
- 2.3 Derivation of Nonlinear Transformations from a Behavioral Model 35
- 2.4 Nonlinear Probability Specifications for Polytomous Variables 37
- 2.5 Behavior of the Logit and Probit Specifications 40
- 2.6 Summary 47

3. Estimation of Probit and Logit Models for Dichotomous Dependent Variables 48

- 3.0 Introduction 48
- 3.1 Assumptions of the Models 48
- 3.2 Maximum Likelihood Estimation 49
- 3.3 Properties of Estimates 52
- 3.4 Interpretation of and Inference from MLE Results 54
- 3.5 Conclusions 65

4. Minimum Chi-Square Estimation and Polytomous Models 66

- 4.0 Introduction 66
- 4.1 Minimum Chi-Square Estimation for Replicated, Dichotomous Data 67
- 4.2 Polytomous Dependent Variables 73

5. Summary and Extensions 78

- 5.0 Introduction 78
- 5.1 Summary 78
- 5.2 Extensions 81
