1	The Nature of Research	1
1.1	Introduction	1
1.2	Observations and Variables	5
1.3	Behavioral Variables	6
1.4	Stimulus Variables	7
1.5	Individual Difference Variables	9
1.6	Discrete and Continuous Variables	10
1.7	Levels of Measurement	11
1.8	Summarizing Observations in Research	14
1.9	Questions and Problems	16
2	Principles of Experimental Design	19
2.1	The Farmer from Whidbey Island	19
2.2	The Experiment	20
2.3	The Question of Interest	21
2.4	Sample Space and Probability	22
2.5	Simulation of the Experiment	23
2.6	Permutations	25
2.7	Combinations	26
2.8	Probabilities of Possible Outcomes	27
2.9	A Sample Space for the Experiment	29
2.10	Testing a Null Hypothesis	30
2.11	Type I and Type II Errors	32
2.12	Experimental Controls	34
2.13	The Importance of Randomization	36
2.14	A Variation in Design	38
2.15	Summary	39
2.16	Questions and Problems	40

3	The Standard Normal Distribution: An Amazing Approximation	45
3.1	Introduction	45
3.2	Binomial Populations and Binomial Variables	46
3.3	Mean of a Population	48
3.4	Variance and Standard Deviation of a Population	49
3.5	The Average of a Sum and the Variance of a Sum	51
3.6	The Average and Variance of Repeated Samples	52
3.7	The Second Experiment with the Farmer: μ_T and σ_T	55
3.8	Representing Probabilities by Areas	57
3.9	The Standard Normal Distribution	58
3.10	The Second Experiment with the Farmer: A Normal Distribution Test	60
3.11	The First Experiment with the Farmer: A Normal Distribution Test	64
3.12	Examples of Binomial Models	68
3.13	Populations That Have Several Possible Values	70
3.14	The Distribution of the Sum from a Uniform Distribution	71
3.15	The Distribution of the Sum T from a U-Shaped Population	75
3.16	The Distribution of the Sum T from a Skewed Population	79
3.17	Summary and Sermon	82
3.18	Questions and Problems	84
4	Tests for Means from Random Samples	87
4.1	Transforming a Sample Mean into a Standard Normal Variable	87
4.2	The Variance and Standard Error of the Mean When the Population Variance σ^2 Is Known	89
4.3	The Variance and Standard Error of the Mean When Population σ^2 Is Unknown	90
4.4	The t Distribution and the One-Sample t Test	92
4.5	Confidence Interval for a Mean	95
4.6	Standard Error of the Difference between Two Means	98
4.7	Confidence Interval for a Difference between Two Means	103
4.8	Test of Significance for a Difference between Two Means: The Two-Sample t Test	103
4.9	Using a Computer Program	106
4.10	Returning to the Farmer Example in Chapter 2	107

4.10.1	Methodological Issues Reiterated	109
4.11	Effect Size for a Difference between Two Independent Means	110
4.12	The Null Hypothesis and Alternatives	112
4.13	The Power of the t Test against a Specified Alternative . .	117
4.14	Estimating the Number of Observations Needed in Comparing Two Treatment Means	122
4.15	Random Assignment of Participants	125
4.16	Attrition in Behavioral Science Experiments	126
4.17	Summary	128
4.18	Questions and Problems	128
5	Homogeneity and Normality Assumptions	133
5.1	Introduction	133
5.2	Testing Two Variances: The F Distribution	134
5.3	An Example of Testing the Homogeneity of Two Variances	136
5.4	Caveats	136
5.5	Boxplots	138
5.6	A t Test for Two Independent Means When the Population Variances Are Not Equal	140
5.6.1	SPSS Example	143
5.7	Nonrandom Assignment of Subjects	145
5.8	Treatments That Operate Differentially on Individual Difference Variables	145
5.9	Nonadditivity of a Treatment Effect	148
5.10	Transformations of Raw Data	149
5.10.1	Two Samples from Different Poisson Distributions .	150
5.10.2	Two Samples from Different Binomial Populations	154
5.10.3	Heterogeneity of Variance: Time as a Dependent Variable	156
5.10.4	When Means Are Proportional to Standard Deviations: The Power Transformation	157
5.10.5	Transformation of Scale: General Considerations .	158
5.11	Normality	160
5.12	Summary	161
5.13	Questions and Problems	162
6	The Analysis of Variance: One Between-Subjects Factor	165
6.1	Introduction	165
6.2	Notation for a One-Way Between-Subjects Design	167

6.3	Sums of Squares for the One-Way Between-Subjects Design	169
6.4	One-Way Between-Subjects Design: An Example	172
6.5	Test of Significance for a One-Way Between-Subjects Design	177
6.5.1	Structural Model	179
6.5.2	Equality of Variance Assumption	181
6.5.3	Equality between the Two-Sample t Test and the F Test for Two Groups	182
6.6	Weighted Means Analysis with Unequal n 's	183
6.7	Summary	185
6.8	Questions and Problems	186
7	Pairwise Comparisons	191
7.1	Introduction	191
7.2	A One-Way Between-Subjects Experiment with 4 Treatments	194
7.3	Protection Levels and the Bonferroni Significant Difference (BSD) Test	197
7.4	Fisher's Significant Difference (FSD) Test	200
7.5	The Tukey Significant Difference (TSD) Test	202
7.6	Scheffé's Significant Difference (SSD) Test	203
7.7	The Four Methods: General Considerations	205
7.8	Questions and Problems	208
8	Orthogonal, Planned and Unplanned Comparisons	211
8.1	Introduction	211
8.2	Comparisons on Treatment Means	212
8.3	Standard Error of a Comparison	215
8.4	The t Test of Significance for a Comparison	216
8.5	Orthogonal Comparisons	218
8.6	Choosing a Set of Orthogonal Comparisons	219
8.7	Protection Levels with Orthogonal Comparisons	222
8.8	Treatments as Values of an Ordered Variable	222
8.9	Coefficients for Orthogonal Polynomials	223
8.10	Tests of Significance for Trend Comparisons	226
8.11	The Relation between a Set of Orthogonal Comparisons and the Treatment Sum of Squares	228
8.12	Tests of Significance for Planned Comparisons	230
8.13	Effect Size for Comparisons	231
8.14	The Equality of Variance Assumption	232

8.15	Unequal Sample Size	232
8.16	Unplanned Comparisons	233
8.16.1	Some Examples of the Scheffé Test	233
8.16.2	The Scheffé Test for Comparisons	236
8.16.3	Properties of the Scheffé Test	237
8.17	Summary	238
8.18	Questions and Problems	239
9	The 2^k Between-Subjects Factorial Experiment	243
9.1	Introduction	243
9.2	An Example of a 2^3 Factorial Experiment	244
9.3	Assumption of Homogeneity of Variance	247
9.4	Factorial Data as a One-Way Between-Subjects Design	249
9.5	Partitioning the Treatment Sum of Squares	251
9.6	Summary of the Analysis of Variance	255
9.7	Graphs That Depict the Interactions	257
9.8	Other 2^k Factorial Experiments	261
9.9	Notation and Sums of Squares for a Factorial Experiment	263
9.10	Summary	266
9.11	Questions and Problems	266
10	Between-Subjects Factorial Experiments: Factors with More Than Two Levels	269
10.1	Introduction	269
10.2	An Example of a $4 \times 3 \times 2$ Factorial Experiment	270
10.3	Partitioning the Sum of Squares into Main Effects and Interactions	272
10.4	Orthogonal Partitioning for Main Effects	274
10.5	Orthogonal Partitioning for Interactions	280
10.6	Effect Size for Comparisons in a Factorial Design	284
10.7	Performing Multiple Tests	284
10.8	The Structural Model and Nomenclature	285
10.9	Summary	287
10.10	Questions and Problems	287
11	Between-Subjects Factorial Experiments: Further Considerations	291
11.1	The Scheffé Test for Comparisons	291
11.2	Pairwise Comparisons in Factorial Designs	294

11.3	Unequal Sample Sizes in a Factorial Design	298
11.4	Individual Difference Factors	301
11.5	Control Variables	302
11.6	Random-Effect Factors	307
11.7	Nested Factors	311
	11.7.1 Nested Designs in SPSS	315
11.8	Homogeneity of Variance	316
11.9	Summary	318
11.10	Questions and Problems	318
12	Within-Subjects Factors: One-Way and 2^k Factorial Designs	321
12.1	Introduction	321
12.2	Example: One-Way ANOVA with a Within-Subjects Factor	322
12.3	Trend Analysis on One-Way Within-Subjects Designs . . .	327
12.4	Assumptions and Effect Size Measures	330
12.5	2^k Factorial Designs: All Within-Subjects Factors	333
12.6	Multiple Tests	336
12.7	Design Considerations with Within-Subjects Designs . . .	338
12.8	Scheffé Test for Within-Subjects Factors	340
12.9	SPSS Syntax	342
12.10	Multilevel Approach to Within-Subjects Designs	344
12.11	Summary	347
12.12	Questions and Problems	347
13	Within-Subjects Factors: General Designs	349
13.1	Introduction	349
13.2	General Within-Subjects Factorial Design	349
13.3	Designs Containing Both Within-Subjects and Between-Subjects Factors	357
	13.3.1 Structural Model	361
	13.3.2 SPSS Syntax	363
13.4	Omnibus Tests	365
13.5	Summary	368
13.6	Questions and Problems	368
14	Contrasts on Binomial Data: Between-Subject Designs	371
14.1	Introduction	371
14.2	Preliminaries	373

14.3	Four Examples of Wald Tests	376
14.3.1	Comparisons on Raw Proportions	376
14.3.2	The Arcsin Transformation	377
14.3.3	The Logit Transformation	379
14.3.4	The Probit Transformation	380
14.4	Other Statistical Tests for Comparisons on Proportions . .	381
14.4.1	Contrast on Raw Proportions (Pooled Error Term)	381
14.4.2	Student's t Test and the ANOVA	383
14.4.3	Comments on the t Test and the ANOVA	385
14.5	Numerical Examples	386
14.5.1	Collapsing the $k \times 2$ Contingency Table	387
14.6	How Do These Tests Differ and What Do They Test? . . .	391
14.6.1	Structural Model	394
14.7	Summary	397
14.8	Questions and Problems	398
15	Debriefing	399
15.1	Introduction	399
15.2	Descriptive Statistics and Plotting Data	400
15.3	Presenting Your Results	401
15.4	Nonparametric Statistical Tests	403
15.5	Nonexperimental Controls	404
15.6	Questions and Problems	409
Appendix A.	The Method of Least Squares	411
A.1	Introduction	411
A.2	The Derivative of a Power Function	412
A.3	The Derivative of a Power Function with an Added Constant	412
A.4	The Derivative of a Power Function with a Multiplicative Coefficient	413
A.5	The Method of Least Squares	413
A.6	Another Method for Finding the Derivative of $\sum(X - a)^2$.	415
A.7	Least Squares Estimates α_i and μ for a Between-Subjects Design with One Factor	416
Appendix B.	Statistical Tables	419
B.1	t Table	420
B.2	F Tables	421
B.2.1	$\alpha = 0.05$	421

B.2.2	$\alpha = 0.01$	422
B.3	Z Table: Standard Normal Distribution	423
B.4	Chi-Squared Table	424
B.5	Table of Coefficients for Orthogonal Polynomials	425
B.6	Tukey's Studentized Range Table for $\alpha = 0.05$	426
