Preface	ix
Foreword	xiii
<i>Jerald Hage</i>	
1. Introduction: The Nature of Science	1
Science	1
Social Science	3
Theory	5
Scientific Jargon	7
Doing Science	9
Outline of the Book	11
2. Theoretical Concepts: The Building Blocks of Theory	15
Constructs, Concepts, and Variables	15
Variables Versus Nonvariables	16
Variables Acting as Nonvariables	18
Independent Versus Dependent Variables	18
Categorical Versus Continuous Variables	20
Converting Categorical Variables Into Continuous Variables	22
Identifying Dimensions of a Construct	25
Defining Concepts	26
Theoretical Definitions	26
Operational Definitions	29
Building Scales and Indexes	33
3. Theoretical Statements Relating Two Variables	37
Identifying Assumptions	38
Forms of Hypotheses	40
Causal Direction	44
How Research Questions and Hypotheses Differ	46

4. Theoretical and Operational Linkages	51
Theoretical Linkages	52
Operational Linkages	57
Operational Linkages as Visual Representations	57
Operational Linkages as Statistics	62
The Whole Story	64
5. Theoretical Statements Relating Three Variables	67
Roles of Three-Variable Relationships in Theory	70
Five Types of Outcomes	72
Proper Form for Hypothesis	81
Some Methodological Considerations	83
Conclusion	84
6. Theoretical Statements Relating Four or More Variables	85
Formulating Theoretical Statements for	
Complex Systems	86
Visualizing Four-Variable Relationships	89
Extending the Three-Variable Strategy	
to Complex Systems	95
Ordering the Variables in Time	98
Analyzing Paths Among Multiple Variables	100
Specifying Nonlinear Relationships and	
Nonadditive Effects	103
Caveats and Conclusions	105
7. Theoretical Models	107
What a Model Is	107
Models Versus Theories	110
Uses of Models	114
Criticisms of Models	119
Types of Models	122
Representing Theories in Model Form	132
Deriving Theoretical Statements From Models	134
Building on Existing Models	137
Developments in Model Building	138
8. Creativity and Theory Building	145
Beginning Points for Theory	146
Creativity in Theory Building	147
Some Suitable Points for Creative Thinking	149
Principles and Techniques of Creative Thinking	149

Attribute Listing	150
The Technique of Forced Relationships	151
Morphological Analysis	151
Brainstorming	152
Generating Lists of Ideas	153
Lateral Thinking	153
Random Input	154
Setting up Provocations	154
The Creative Hit List	155
Visualization	155
Writing Techniques	156
Letting the Unconscious Do Some of the Work	156
Metaphor and Analogy in Theory Building	157
Examples from Mass Communication Theory	158
Advantages of Metaphor and Analogy	162
Cautions in Using Metaphor and Analogy	164
Finding Metaphors and Analogies	165
Switching to the Critical Mode	165
Conclusion	166
9. Using and Evaluating Theory	167
Atheoretical Research	168
The Usefulness of Theory	169
Summarizing Knowledge	169
Practical Applications	169
Guiding Research	169
Ten Steps of Building a Theory	170
Evaluating Theories	171
Testability	171
Falsifiability	172
Parsimony	172
Explanatory Power	172
Predictive Power	173
Scope	173
Cumulative Nature of Science	173
Degree of Formal Development	174
Heuristic Value	176
Aesthetics	176
Sample Evaluation of a Theory	176
Theory Building and Platt's "Strong Inference"	178

Constraints on Theory Building	179
Final Suggestions	180
Conclusion	181
Appendix A. Guidelines for Preparing Tables and Figures	183
Appendix B. Acceptable Levels of Measurement for Various Statistics	201
References	203
Index	211
About the Authors	221
