

New Trends in Quantum Structures

ANATOLIJ DVUREČENSKIJ

and

SYLVIA PULMANNOVÁ

*Mathematical Institute,
Slovak Academy of Sciences,
Bratislava, Slovakia*

This monograph deals with the latest results concerning different types of quantum structures. This is an interdisciplinary realm joining mathematics, logic and fuzzy reasoning with mathematical foundations of quantum mechanics, and it indicates many ways of their applications.

The book consists of seven chapters. The first four chapters are devoted to difference posets and effect algebras; MV-algebras and quantum MV-algebras, and their quotients; and to tensor product of difference posets. Chapters 5 and 6 discuss BCK-algebras with their applications. Chapter 7 addresses Loomis-Sikorski-type theorems for MV-algebras and BCK-algebras. Throughout the book, important facts and concepts are illustrated by exercises.

Audience

This book will be of interest to mathematicians, physicists, logicians, philosophers, quantum computer experts, and students interested in mathematical foundations of quantum mechanics as well as in non-commutative measure theory, orthomodular lattices, MV-algebras, effect algebras, Hilbert space quantum mechanics, and quantum logic ideas.

Contents

Preface	vii
Introduction	1
CHAPTER 1 D-posets and Effect Algebras	9
1.1 D-posets	10
1.2 Effect Algebras	15
1.3 Morphisms and Categorical Equivalence of D-posets and Effect Algebras	20
1.4 Group Representations of Effect Algebras. Interval Effect Algebras	22
1.4.1 Examples of Interval Algebras	32
1.5 Generalized Orthoalgebras and OMP as Orthomodular Structures	35
1.6 Examples and Applications	42
1.7 Effect Algebras with the Riesz Decomposition Property	58
1.8 D-lattices and Lattice-ordered Effect Algebras	69
1.9 Some Basic Constructions with D-posets/Effect Algebras	80
1.9.1 Subalgebras and Ideals	80
1.9.2 Center and Direct Products	82
1.9.3 Principal and Sharp Elements in Effect Rings	86
1.9.4 Finite Distributive Lattice Ordered Effect Algebras	87
1.9.5 Direct Products of Interval Algebras	91
1.9.6 Horizontal Sums	92
1.9.7 Direct Limits of D-posets/Effect Algebras	94
1.10 Compatibility and Observables	97
1.10.1 Compatibility in Orthomodular Structures	97
1.10.2 Compatibility in GDLs	102
1.10.3 Observables	109
1.11 Order Properties of $\mathcal{E}(H)$	117
1.12 Exercises	121

CHAPTER 2	MV-algebras and QMV-algebras	129
2.1	S-algebras	130
2.2	MV-algebras	132
2.2.1	Basic Properties	132
2.2.2	Congruences and Ideals in MV-algebras	143
2.2.3	Subdirect Representation Theorem	147
2.2.4	Semisimple MV-algebras and Bold Fuzzy Set Theory	148
2.3	QMV-algebras	152
2.3.1	Basic Properties of QMV-algebras	153
2.3.2	Examples of QMV-algebras	158
2.3.3	Commutativity in QMV-algebras	162
2.3.4	Congruences and Ideals in Quantum MV-algebras	167
2.3.5	Lattices of Ideals in QMV-algebras	177
2.3.6	Quotients of QMV-algebras	181
2.3.7	Quasilinearity and Weak Linearity	185
2.3.8	Open Problems	189
CHAPTER 3	Quotients of Partial Abelian Monoids	191
3.1	Congruences and Ideals on Partial Abelian Monoids	192
3.1.1	Congruences and Quotients	193
3.1.2	Riesz Ideals on CPAMs	198
3.1.3	Congruences and Ideals in Effect Algebras	202
3.2	Some Lattices of Ideals in Positive CPAMs	211
3.2.1	R_1 -ideals and Riesz Ideals	211
3.3	Applications to Dimension Theory	220
3.3.1	Congruences and Dimensional Equivalence	221
3.3.2	Relations to K_0 of AF C^* -algebras	223
3.4	Exercises	227
CHAPTER 4	Tensor Product of D-Posets and Effect Algebras	231
4.1	D-test Spaces and Difference Posets	232
4.1.1	D-test Spaces	232
4.1.2	D-algebraic D-test Spaces	234
4.1.3	D-Test Spaces versus Difference Posets	236
4.1.4	Examples of D-Test Spaces	237

4.1.5 Weights on D-test spaces	240
4.1.6 Morphisms and Bimorphisms	241
4.1.7 Tensor Products of D-test Spaces	243
4.2 Tensor Product of Difference Posets	244
4.2.1 Tensor Product	244
4.2.2 Bounded Boolean Powers and Tensor Products	247
4.2.3 Tensor Product of D-posets and D-test Spaces	251
4.2.4 State Tensor Product	253
4.2.5 Weight Tensor Product of D-test Spaces	259
4.2.6 Examples of State Tensor Products	264
4.3 Partition Logics, Orthoalgebras and Automata	267
4.3.1 Boolean Atlases	267
4.3.2 Quasi Orthoalgebras and Orthoalgebras	268
4.3.3 Examples of Orthoalgebras	269
4.3.4 Relations among Boolean Atlases and Quasi Orthoalgebras	274
4.3.5 Partition Logics	275
4.3.6 Partition Logics and Automata Logics	277
4.3.7 Partition Logics in Examples	279
4.3.8 Partition Test Spaces	283
4.3.9 Product of Partition Logics	285
4.3.10 Exercises	289

CHAPTER 5 BCK-algebras 293

5.1 Elements of BCK-algebras	293
5.1.1 Definitions and Elementary Properties of BCK-algebras	293
5.1.2 Examples of BCK-algebras	296
5.1.3 Commutative BCK-algebras	299
5.1.4 BCK-algebras with the Condition (S)	304
5.1.5 Union BCK-algebras	306
5.1.6 Direct Product of BCK-algebras	307
5.1.7 Ideals of a BCK-algebra	308
5.1.8 Measures on BCK-algebras	312
5.1.9 Exercises	319
5.2 Commutative BCK-algebras with the Relative Cancellation Property	320
5.2.1 Basic Properties of BCK-algebras with the R. C. Property	321
5.2.2 BCK-algebras and the Riesz Decomposition Property	324
5.2.3 Ideals and Prime Ideals	326
5.2.4 Subdirect Product of Linear Commutative BCK-algebras	328
5.2.5 Embedding of Commutative BCK-algebras into ℓ -groups	330

5.2.6	Characterizations of Comm. BCK-algebras with the R.C. Property	334
5.2.7	Universal Groups for Commutative BCK-algebras	336
5.2.8	BCK-hull of Commutative BCK-algebras	339
5.2.9	Relations among BCK-algebras and Universal Groups	342
5.2.10	Ideals of BCK-algebras and ℓ -ideals	345
5.2.11	Quasi Strong Units of BCK-algebras	350
5.2.12	Exercises	351
5.3	Representation of Commutative BCK-algebras	352
5.3.1	Categorical Equivalences of Commutative BCK-algebras	353
5.3.2	Categorical Representation of Bounded Commutative BCK-algebras	357
5.3.3	Categorical Representation of Comm. BCK-algebras with Q. S. Unit	358
5.3.4	Product on MV-algebras	359
5.3.5	Product on Commutative BCK-algebras	370
5.3.6	Ideals in Product BCK-algebras and BCKf-algebras	373
5.3.7	Exercises	376
CHAPTER 6 BCK-algebras in Applications		379
6.1	Algebraic Properties of Commutative BCK-algebras	379
6.1.1	Semisimple BCK-algebras	379
6.1.2	Topologies and Semisimplicity	382
6.1.3	Fuzzy set representation of BCK-algebras	385
6.1.4	Atomic and Semisimple BCK-algebras	386
6.1.5	Measure-Morphisms and Maximal Ideals	390
6.1.6	State Space of a BCK-algebra	393
6.1.7	Simple Commutative BCK-algebras	399
6.1.8	Exercises	403
6.2	Dedekind Complete BCK-algebras	405
6.2.1	Dedekind Complete Commutative BCK-algebras	405
6.2.2	Decomposition of Dedekind Complete Atomic BCK-algebras	413
6.2.3	Exercises	417
6.3	Connections between BCK-algebras and Difference Posets	419
6.3.1	Exercises	427
6.4	Pseudo MV-algebras	428
6.4.1	On Partial Addition in Pseudo MV-algebras	428
6.4.2	Commutativity of Atomic Pseudo MV-algebras	435
6.4.3	Commutativity of Linear Pseudo MV-algebras	438
6.4.4	Ideals of Pseudo MV-algebras	439
6.4.5	Exercises	444

CHAPTER 7 Loomis-Sikorski Theorems for MV-algebras and BCK-algebras	447
7.1 Loomis–Sikorski’s Theorem for σ -complete MV-algebras	448
7.1.1 Bold Algebras of Fuzzy Sets	448
7.1.2 σ -complete MV-algebras and Tribes	451
7.1.3 Loomis–Sikorski’s Theorem	458
7.1.4 Loomis–Sikorski Theorem for Dedekind σ -complete ℓ -groups	465
7.2 Loomis–Sikorski’s Theorem for MV-algebras and BCK-algebras	468
7.2.1 Loomis–Sikorski’s Theorem for Perfect MV-algebras	468
7.2.2 Loomis-Sikorski’s Theorem for Product BCK-algebras	471
7.3 Weakly Divisible MV-algebras	474
7.4 MV-observables	478
7.4.1 MV-observables	478
7.4.2 Calculus of MV-observables	483
7.4.3 Exercises	488
