

Praise for earlier editions of *Surveys in Social Research*

'This excellent book presents a lucid and comprehensive overview of all the contemporary issues in the development of surveys in social research ... The resources make this book valuable for novices but also a great addition to the library of more experienced researchers.'

Journal of Family Studies

'De Vaus helps to demystify survey research by breaking down the process into manageable components. This is perhaps the greatest strength – he encourages the reader to tackle and understand "statistical research" rather than shy away.'

Social Security Journal

'...one of the most comprehensive and accessible texts on survey research available.'

The Australian and New Zealand Journal of Sociology

'By concentrating on one method and providing a sound working knowledge of how to do good surveys, de Vaus indeed achieves a distinctive balance...'

Canadian Journal of Sociology

David de Vaus' classic text *Surveys in Social Research* provides clear advice on how to plan, conduct and analyse social surveys. It emphasises the links between theory and research, the logic and interpretation of statistics and the practices of social research. This sixth edition has been completely revised and updated, and contains new examples, data and extensive lists of web resources.

As well as explaining how to conduct good surveys, de Vaus shows how to become a critical consumer of research. He argues that the logic of surveys and statistics is simply an extension of the logic we use in everyday life; analysis, however, requires creativity and imagination rather than the application of sterile mechanical procedures. The prime goal of research should be to gain accurate understanding and, as a researcher, use methods and techniques which enhance understanding. De Vaus advocates researchers use the method, rather than letting the method use you.

Surveys in Social Research is essential reading for students and researchers working with surveys. It assumes no background in statistical analysis, and gives you the tools you need to come to grips with this often challenging field of work.

David de Vaus is Emeritus Professor in Sociology, University of Queensland.

an informa business

Brief contents	v	Descriptive research	22
Detailed contents	vi	Explanation: searching for causes or consequences	22
Boxes, figures, web pointers and tables	xi	Explanation: exploring a simple idea	23
Preface	xvii	Explanation: exploring more complex ideas	23
Part I THE SCOPE OF SURVEY RESEARCH	1	Using the internet to review existing information and research	24
1 The nature of surveys	3	Scope of the research	28
What is a survey?	3	Particular but exhaustive or general but partial?	28
Form of data	3	Units of analysis	28
Methods of analysis	5	Research design	29
Quantitative and qualitative research	6	Descriptive research	29
Practice vs ideal types	7	Explanatory research	29
2 Theory and social research	9	The classic experimental design	30
The interaction of theory and research	9	Panel design	32
The process of theory construction	10	Quasi-panel design	32
Establishing the meaning of observations	11	Retrospective panel design	32
Levels of generality	12	Retrospective experimental design	33
Plausibility and the need for theory testing	12	Cross-sectional or correlation design	34
The process of theory testing	13	One group post-test only design	35
Six stages in theory testing	13	Why bother about design?	35
Theory construction and testing: an ongoing process	15	Refining research questions: a checklist	36
The need for theory and observation	16		
Sources of theories	17	Part II COLLECTING SURVEY DATA	39
Sociological perspectives	17	4 Developing indicators for concepts	41
Other sources	18	Clarifying the concepts	41
The role of descriptive research	18	How to clarify concepts	42
The centrality of theory	19	Developing indicators	45
3 Formulating and clarifying research questions	21	How many indicators to use	47
Types of research questions	21	How to develop indicators	47
		Evaluating indicators	47

Reliability	48	Discrimination	95
Validity	51	Response rate	96
Criterion validity	51	Same meaning for all respondents	96
The problem of meaning	52	Relevance	96
Developing indicators: a checklist	52	Optimising and satisficing	96
5 Ethics and data collection	55	Wording questions	97
Research participants	56	Selecting question type	99
Voluntary participation	56	Open and closed formats	99
Informed consent	57	Response formats and level of measurement	100
No harm	58	Developing question responses	100
Anonymity and confidentiality	59	Exhaustiveness (or inclusiveness)	100
Privacy	61	Exclusiveness	101
Colleagues, the profession, sponsors and the public	61	Balancing categories	101
Colleagues and the profession	61	Developing response alternatives for closed-choice questions	101
Sponsors	63	Numerical rating scales	101
The public	63	Scores	103
Data collection ethics checklist	63	Ranking	104
6 Finding a sample	66	Checklists	104
Some sampling concepts	66	Binary choice formats	104
Types of probability samples	68	Multiple choice formats	104
Simple random sampling (SRS)	68	Non-committal responses	105
Systematic sampling	69	No opinion and don't know responses	105
Stratified sampling	71	Inclusion of the middle alternative	106
Multistage cluster sampling	71	Number of response categories	106
Internet samples	74	Response sets	107
Web page-based surveys	74	Social desirability	107
Internet samples and representativeness	75	Acquiescent response sets	107
The use of internet samples	76	Questionnaire layout	108
Sample size	77	Answering procedures	108
Sample power	80	Contingency questions	108
Non-response	81	Instructions	109
Weighting samples	83	Use of space	110
How to weight a sample on a single characteristic	83	Order of questions	110
How to weight a sample on two or more characteristics	83	Setting up for coding	111
Secondary analysis	84	Questionnaire length	111
Non-probability sampling	88	Telephone questionnaires: additional considerations	112
Sampling checklist	89	Question wording	112
7 Constructing questionnaires	93	Layout	113
Selecting areas	93	Pilot testing: evaluating questions and questionnaires	114
Question content	94	Three stages of pilot testing questions	114
Direction, extremity and intensity of attitudes	95	Pilot testing items	115
Principles of question design	95	Pilot testing questionnaires	116
Reliability	95	Flow	116
Validity	95	How to pilot test	116
		Questionnaire design checklist	117

8 Administering questionnaires	121
Main methods of administration	121
Face-to-face interviews	121
Telephone interviews	122
Postal self-administered questionnaires	122
Internet surveys	123
Computer-assisted questionnaire administration	123
Four methods compared: strengths and weaknesses	125
Response rates	125
Obtaining representative samples	126
Survey method effects on questionnaire design	127
Quality of answers	128
Implementing the survey	129
Multi-mode methods of administration	131
Maximising response rates in personal interviews	131
Ensuring quality in personal interviews	132
Training and supervision	132
Techniques for personal interviewing	133
Smooth implementation of personal interviews	133
Maximising response rates in postal surveys	133
The cover letter	133
Preparing the envelopes	134
Using incentives	135
Selecting the mail-out date	135
Follow-ups	135
Undelivered questionnaires	136
Answering respondents' questions	136
Smooth implementation of postal questionnaires	136
Supplies	136
Identification numbers	136
Staffing	136
Maximising response rates in telephone surveys	137
Locating the respondent	137
Gaining cooperation	137
Ensuring quality in telephone surveys	137
Smooth implementation of telephone surveys	138
Maximising response rates in internet surveys	138
Ensuring quality in internet surveys	139
Smooth implementation of internet surveys	140
Questionnaire administration checklist	140

Part III SETTING UP THE DATA FOR ANALYSIS	145
9 Coding	147
Classifying responses	147
Precoding	148
Postcoding	148
Allocating codes to each variable	148
Multilevel classification schemes	148
Developing a set of codes from the answers given	150
Multiple answers	151
Coding multiple responses to closed questions	152
Multiple responses to open questions	153
Coding numerical data	155
Coding missing data	155
Producing a codebook	156
Checking for coding errors	156
Entering data	157
Manual data entry	157
Scanning	157
Automatic data entry	158
Issues that complicate coding	158
Coding checklist	159
10 Preparing variables for analysis	161
Changing categories	161
Collapsing categories	162
Approaches to collapsing categories	163
Rearranging categories	164
Reverse coding	165
Creating new variables	167
Conditional transformations	167
Creating new variables with arithmetic transformations	168
Standardising variables	169
Standardising using z-scores	169
Standardising for different distributions	170
Adjustments with ordinal level variables	172
The problem of missing data	173
Checking for missing data bias	173
Minimising the effect of missing values	174
Data preparation checklist	175
11 Building scales	179
Why bother building scales?	179
Summated scaling: the logic	181
Likert scales	181
Construct a rough scale	182

Selecting the best items	184	14 Bivariate analysis: nominal and ordinal variables	241
Creating the final scale	185	Tables	242
Factor analysis	185	The structure of cross-tabulations	242
Selecting variables for analysis	186	Percentaging a cross-tabulation	244
Extracting an initial set of factors	187	Reading a cross-tabulation	245
Extracting the final factors—rotation	189	The character of relationships	245
Factor scores and scales	190	Presenting cross-tabulations	248
Issues that complicate scaling	191	When to use tables	248
Interpreting scale scores	191	Graphs	249
Equivalence of items	192	Clustered bar chart	249
Forcing scales to have meaningful upper and lower limits	193	Stacked bar chart	250
The problem of missing data	193	Line graph	252
Scaling checklist	194	Boxplots	253
Part IV ANALYSING SURVEY DATA	201	Using summary statistics	254
12 Overview of analysis	203	Chi-square based correlations	254
The number of variables	203	PRE-based correlations	256
Levels of measurement	203	Interpreting correlation coefficients: direction	257
Interval level	204	Interpreting correlation coefficients: strength	257
Ordinal level	204	Correlation coefficients when both variables are nominal	258
Nominal level	205	Statistics when both variables are ordinal	259
Influencing the level of measurement	205	Statistics for two ordinal variables with many categories	259
Which level of measurement to aim for	205	Statistics for mixed levels of measurement	259
Methods of analysis	206	Correlation coefficients for non-linear relationships	261
Descriptive and inferential statistics	206	Weaker than expected relationships	261
Descriptive statistics	207	Inferential statistics	262
Inferential statistics	207	Significance tests	262
Ethics and analysis	209	Interval estimates	265
Overview of analysis: a checklist	210	Bivariate analysis for nominal and ordinal variables checklist	267
13 Univariate analysis	212	15 Bivariate analysis for interval-level variables	270
Descriptive statistics	212	Interval-level dependent variables with categorical independent variables	270
Tabular analysis	212	Tabular analysis	271
Graphical analysis	215	Graphical analysis	272
Distortions with graphs	219	Summary statistics: descriptive analysis	274
Summary descriptive statistics	219	Summary statistics: inferential analysis	275
Nominal variables	219	Comparing means	275
Ordinal variables	222	Dichotomous independent variable	276
Interval variables	224	Independent variables with three or more categories	277
Inferential statistics	228	Significance of eta	278
Significance tests for nominal and ordinal variables	228		
Interval estimates for nominal and ordinal variables	231		
Significance tests for interval variables	233		
Interval estimates for interval variables	233		
Selecting the appropriate statistic	234		
Univariate analysis checklist	236		

Two interval-level variables	278	Multiple regression with non-interval independent variables: dummy regression	325
Graphs	278	Path analysis	328
Summary statistics: Pearson's correlation	279	Other multivariate methods	331
Regression analysis	281	Multivariate checklist	331
Regression coefficients	281		
When can regression be used?	285		
Summary statistics: inference	285		
Rank-order correlation	286		
Correlation matrices	289		
Checklist for bivariate analysis of interval variables	290		
16 Elaborating bivariate relationships	295	18 Putting it into practice: a research example	336
The logic of statistical controls	295	The research question	336
Experimental controls	295	Hypotheses	337
Cross-sectional designs and statistical controls	296	Clarifying and operationalising the concepts	337
Multiple statistical controls	297	Religion	337
The purpose of elaboration	297	Independent and intervening variables	338
Types of relationship between three variables	298	Background variables	338
Steps in elaboration analysis	300	Preparing the variables for analysis	338
Elaboration using summary statistics: partial correlation	300	Producing the scales	339
Interpreting partial correlation statistics	301	Preparing variables for regression analysis	340
Using tables for elaboration analysis	304	Initial analysis	341
Spurious relationships	304	Kendall's tau and Spearman's rho	342
Indirect causal relationships	306	Cross-tabulations with gamma	342
Specification	307	Testing the explanations	343
Replication	307	Workforce participation: cross-tabulation analysis	343
Problems with conditional tables	307	Workforce participation: multiple regression analysis	343
Graphical methods of elaboration analysis	309	Stage in the family life cycle: multiple regression analysis	346
Line graphs	310	Family focus: multiple regression analysis	346
Line graphs using different scales on the Y-axis	311	Decomposing the gender gap	347
Tree diagrams	311	Discussion	349
Elaboration checklist	312	Summarise relevant results	349
17 Multivariate analysis	316	<i>Ex post facto</i> explanations for further examination	350
Individual variables	317	Implications	350
Partial correlation	317	Summary	350
Models	321		
Multiple correlation	322		
Multiple regression	322		
Cautions	324		
		Glossary	352
