

CONTENTS

1. INTRODUCTION: THE NATURE OF METAPHYSICS	1
What is metaphysics?	1
The threat of relativism	4
The objection from naturalized epistemology	5
Kant and the possibility of metaphysics	7
Metaphysics and empirical knowledge	9
Possibility, concepts, and semantics	11
Ontology and ontological categories	13
A short outline of this book	16

PART I: IDENTITY AND CHANGE

2. IDENTITY OVER TIME AND CHANGE OF COMPOSITION	23
Numerical and qualitative identity	23
Composite objects and change of parts	24
The puzzle of the ship of Theseus	25
Two radical solutions to the puzzle	28
A better solution?	30
Intermittent existence	33
Fission and fusion	35
Is vague identity possible?	36
The paradox of the thousand and one cats	37
3. QUALITATIVE CHANGE AND THE DOCTRINE OF TEMPORAL PARTS	41
Leibniz's Law and the problem of qualitative change	41
Presentism	42
Three temporal realist solutions to the problem	43
A clarification of the adverbial solution	47
Perdurance versus endurance	49
The notion of temporal parts	50
A problem for perdurance theories	54
Temporal parts as theoretical entities	55

4. SUBSTANTIAL CHANGE AND SPATIOTEMPORAL COINCIDENCE	59
Beginning and ceasing to exist	59
Can there be coinciding objects?	61
Relative versus absolute identity	62
Temporal parts and coinciding objects	65
Some radical solutions to the problem of coincidence	66
In defence of coinciding objects	68
Identity and constitution	73
The problem of Tibbles and Tib	74

PART II: NECESSITY, ESSENCE, AND POSSIBLE WORLDS

5. NECESSITY AND IDENTITY	79
Two kinds of possibility	79
Possibility as a dimension of variation	80
Possible worlds	81
Necessary truths and necessary beings	82
An argument for the necessity of identity	84
Some objections to the argument	86
Rigid designators	89
Transworld identity	90
Could two objects have been one?	91
The necessity of identity and the mind–body problem	92
6. ESSENTIALISM	96
Essential and accidental properties	96
Essential properties and the necessity of identity	99
Essential properties and the problem of transworld identity	100
Individual essences and haecceities	101
The necessity of origin	103
A four-worlds argument for the necessity of origin	104
The necessity of constitution	106
A temporal comparison and accessibility relations	109
A brief stock-taking	112
Essence and conventionalism	113

7.	POSSIBLE WORLDS	115
	The language of possible worlds	115
	Modal logics and their interpretation	116
	Accessibility relations and essentialist theses	119
	How should we understand talk of possible worlds?	120
	A deflationary view	121
	Transworld identity again	123
	Another deflationary view	124
	Modal fictionalism	126
	Realist theories of possible worlds	128
	Robust realism and the indexical conception of actuality	129
	Moderate realism and actualism versus possibilism	131

PART III: CAUSATION AND CONDITIONALS

8.	COUNTERFACTUAL CONDITIONALS	137
	Subjunctive versus indicative conditionals	137
	Counterfactual conditionals and possible worlds	139
	Conditional excluded middle and 'might' counterfactuals	141
	The question of transitivity	142
	The notion of 'closeness' between possible worlds	145
	The problem of deterministic worlds	146
	Backtracking counterfactuals and context-dependency	148
	The question of transitivity again	151
	An alternative analysis of counterfactuals	152
9.	CAUSES AND CONDITIONS	155
	Causal statements and the relata of causation	155
	Event causation	157
	The 'Humean' analysis of causation and its problems	158
	The counterfactual approach to event causation	160
	Probabilistic event causation	162
	Contributory causes and background conditions	165
	Fact causation	167
	The Slingshot Argument	169
	Possible responses to the Slingshot Argument	171

10.	COUNTERFACTUALS AND EVENT CAUSATION	174
	The simple counterfactual analysis of event causation	174
	Some difficulties for the simple analysis	175
	The problem of causal overdetermination	178
	Some possible responses to the problem	180
	The complex counterfactual analysis of event causation	182
	Pre-emption cases	184
	General objections to the counterfactual approach	186
	The circularity objection	186
	The objectivity objection	188
	Alternative approaches	190

PART IV: AGENTS, ACTIONS, AND EVENTS

11.	EVENT CAUSATION AND AGENT CAUSATION	195
	Agents and agent causation	195
	An analysis of agent causation	196
	Causative action verbs and basic actions	198
	The case for irreducible agent causation	199
	The problem of free will	201
	Mental causation, rational choice, and freedom of action	203
	Basic actions and backward causation	205
	The conceptual priority of agent causation	206
	An analysis of event causation	208
	Implications for the notion of causality	211
12.	ACTIONS AND EVENTS	214
	Do events exist?	214
	An argument for the existence of events	216
	Criteria of identity	220
	The individuation of actions and events	221
	Are actions events?	222
	A causal criterion of identity for events	224
	Some responses to the circularity objection	226
	Events as property exemplifications	228

13.	EVENTS, THINGS, AND SPACE-TIME	232
	Event-ontologies versus thing-ontologies	232
	Event-ontologies and modern physics	233
	Events and change	237
	Are there any 'subjectless' events?	240
	Reductionism versus eliminativism	241
	Is motion change of distance?	242
	Prospects for a non-reductive pluralism of things and events	244
	Can there be time without change?	245
	Shoemaker's argument	247
	PART V: SPACE AND TIME	
14.	ABSOLUTISM VERSUS RELATIONALISM	253
	Dimensionality and the structure of space	253
	Space as 'the void' versus space as a 'plenum'	256
	Newtonian absolute space	257
	The rotating bucket experiment and Mach's objection	259
	The two-globes thought experiment	262
	Objections to Mach's position	263
	Some varieties of relationalism	264
	The general theory of relativity and the nature of space	266
	The special theory of relativity and the nature of time	268
15.	INCONGRUENT COUNTERPARTS AND THE NATURE OF SPACE	271
	Substantivalism, relationalism, and transcendental idealism	271
	The argument from incongruent counterparts	273
	Kant's example of the solitary hand	274
	A two-dimensional analogy	276
	Moebius bands and the topology of space	278
	Actual space versus possible spaces	280
	How many dimensions could space have?	283
	Does 'space' denote an ontological category?	284
	Is handedness a property?	285

16.	THE PARADOXES OF MOTION AND THE POSSIBILITY OF CHANGE	288
	Reality and the appearance of change	288
	The Paradox of the Racecourse	289
	Is the paradox self-defeating?	291
	An inverted version of the paradox	291
	A common-sense objection to the paradox	292
	Infinite series and supertasks	293
	Why does the paradox seem so compelling?	296
	More on inverted versions of the paradox	297
	The Achilles Paradox	299
	The Paradox of the Arrow and instantaneous velocity	300
	How can something begin to move?	303
	The Paradox of the Moving Blocks and discrete space-time	304
17.	TENSE AND THE REALITY OF TIME	307
	The A series and the B series	307
	Change and the passage of time	310
	McTaggart's argument for the unreality of time	312
	Does the A series involve a contradiction?	313
	Tenses and the regress problem	314
	A diagnosis of McTaggart's mistake	318
	The B theorist's conception of time and tense	319
	Is the passage of time illusory?	320
	Dynamic conceptions of time and the reality of the future	322
18.	CAUSATION AND THE DIRECTION OF TIME	325
	Temporal asymmetry and the structure of time	325
	Temporal asymmetry and the passage of time	328
	Causation and temporal asymmetry	329
	Backward causation and time travel into the past	332
	Affecting the past versus changing the past	335
	'Personal' time versus 'external' time	335
	Problems of multiple location and multiple occupancy	336
	The Grandfather Paradox and the problem of causal loops	338
	Time travel, general relativity, and informational loops	341
	The laws of thermodynamics and the 'arrow' of time	342

PART VI: UNIVERSALS AND PARTICULARS

19.	REALISM VERSUS NOMINALISM	347
	The distinction between universals and particulars	347
	A spatiotemporal account of the distinction	348
	Instantiation and an alternative account	350
	Nominalists versus realists	352
	Predicates and properties	353
	Resemblance classes and resemblance nominalism	355
	Some problems for resemblance nominalism	357
	The bundle theory	360
	Trope theory	361
	The problem of resemblance	362
20.	THE ABSTRACT AND THE CONCRETE	366
	Two notions of concreteness and the status of tropes	366
	The spatiotemporal and causal criteria of abstractness	368
	Existence in space and time	370
	How is knowledge of abstract objects possible?	372
	The indispensability argument	373
	Mathematical truths and mathematical objects	375
	The ontological status of sets	377
	The ontological status of possible worlds	378
	Universals and laws of nature	379
	Are universals abstract or concrete objects?	382
	The ontological status of facts and states of affairs	384
	Bibliography	386
	Index	396
