PART I FUNDAMENTALS

1

FUNDAMENTALS OF MODELING

1

Introduction 1

Concepts of Statistical Hydrologic Models 3

Development of Models 5

Model Evaluation 6

Problems and Models 8

Modeling and Information Content of Data 10

Summary, 15

Exercises 15

References and Suggested Readings 16

2**FUNDAMENTALS OF PROBABILITY AND STATISTICS****18**

Introduction 18

Statistical Frequency Distributions 18

*Mathematical Requirements of Frequency Distributions, 21**Samples versus Populations, 24**Moments of a Distribution, 25*

Common Probability Functions 31

*The Normal Distribution, 31**The Student t Distribution, 32**The Chi-Square Distribution, 32**The F Distribution, 32**The Binomial Distribution, 33*

Confidence Intervals 34

Tolerance Limits 35

Hypothesis Testing 42

*Test on a Single Mean, 43**Test of a Distribution Function, 44*

Fundamentals of Simulation 49

*Random Number Generation, 50**Statistical Tests of Random Numbers, 52**Simulation as a Decision-Making Tool, 53**The Data Analysis Process, 63*

Exercises 63

3**FUNDAMENTALS OF OPTIMIZATION****68**

Introduction 68

Definitions 69

Elements of Optimization 70

Classification of Optimization Methods 71

Analytical Optimization 72

*The Principle of Least Squares, 73**Lagrangian Optimization, 74*

Reliability of a Prediction Equation 77

*The Correlation Coefficient, 77**The Standard Error of Estimate, 78**The Analysis of Variance, 79**The Standardized Partial Regression Coefficients, 80*

<i>Assumptions Underlying the Regression Model</i>	81
Composite Fitting	83
Applications in Hydrologic Analysis	86
Numerical and Subjective Optimization	94
Exercises	94

PART II UNIVARIATE METHODS

4

UNIVARIATE ESTIMATION

98

Introduction	98
The Univariate Modeling Process	99
<i>Elements of Frequency Analysis</i>	101
Estimation of Model Parameters	101
<i>Types of Parameters</i>	102
<i>Method of Moment Estimation</i>	103
<i>Maximum Likelihood Estimation</i>	105
Construction of Probability Paper	108
<i>Normal Probability Paper</i>	109
<i>Extreme-Value Plotting Paper</i>	110
Forms Used as Frequency Distributions	111
<i>Normal Distribution</i>	111
<i>Poisson Distribution</i>	114
<i>Gamma Distribution</i>	116
<i>Pearson Type III Distribution</i>	119
<i>Extreme-Value Distribution</i>	121
Moment Ratio Analysis	126
Data Transformations	130
<i>The Log-Normal Distribution</i>	130
<i>Log Pearson Type III Distribution</i>	131
<i>The Power Transformation</i>	131
<i>Change of Variable</i>	133
Risk Versus Return Period	134
Evaluating the Accuracy of Prediction	135
Tolerance Limits by Simulation	138
Additional Considerations in Univariate Analysis	142
Exercises	144
References and Suggested Readings	148

5

SEMIVARIOGRAM ANALYSIS AND KRIGING

150

- Introduction 150
- The Estimation Problem 151
- Semivariogram Analysis 154
 - Semivariogram Models, 157*
 - Estimating Semivariogram Parameters, 160*
 - Anisotropy and Boundary Effects, 160*
 - Spatial and Volumetric Estimation, 162*
- Estimation of Standard Errors 169
 - Case 1: Point/Point Estimation, 170*
 - Case 2: Point/Vector Estimation, 171*
 - Case 3: Line/Point Estimation, 173*
 - Case 4: Line/Vector Estimation, 176*
 - Case 5: Line/Line Estimation, 176*
 - Case 6: Field/Point Estimation, 177*
 - Case 7: Field/Vector Estimation, 182*
 - Case 8: Field/Line Estimation, 183*
- Estimation by Kriging 184
- Exercises 192
- References and Suggested Readings 196

PART III OPTIMIZATION

6

STATISTICAL OPTIMIZATION

198

- Introduction 198
- The Calibration and Evaluation of Linear Models 199
 - The Principle of Least Squares, 201*
 - Goodness of Fit, 204*
 - Matrix Notation, 208*
 - Prediction and Prediction Variance, 212*
- Stepwise Regression Analysis 218
 - Model Structure, 218*
 - Forms of Stepwise Regression, 219*
 - Criteria for Model Selection, 223*
- Regression Analysis of Nonlinear Models 233
 - Polynomial and Power Model Forms, 234*
 - Transformation and Calibration, 235*

<i>Goodness of Fit</i> , 236	
<i>The Analysis of Variance for Polynomial Models</i> , 237	
<i>Trigonometric Transforms</i> , 243	
<i>Circular Variates</i> , 245	
<i>Additional Nonlinear Model Forms</i> , 249	
<i>Segmented Regression Functions</i> , 249	
Exercises	253
References and Suggested Readings	261

7

NUMERICAL OPTIMIZATION

262

Introduction	262
The Phases of Numerical Optimization	264
Phase 1 Search Procedures	266
The Phase 2 Search	269
<i>Numerics for Nonlinear Least Squares</i> , 269	
<i>Variations on Nonlinear Least Squares</i> , 285	
A Phase 3 Analysis	286
Applications in Hydrologic Analysis	290
Exercises	300
References and Suggested Readings	302

8

SUBJECTIVE OPTIMIZATION

304

Introduction	304
An Introductory Example	305
Calibration of a Simple Watershed Model	308
<i>Model Formulation</i> , 309	
<i>Model Calibration</i> , 313	
<i>Measures of Performance</i> , 318	
Application with Hydrologic Data	320
<i>Model Formulation</i> , 320	
<i>Assessing Model Performance</i> , 323	
<i>Model Calibration</i> , 324	
<i>Discussion</i> , 349	
Calibration of a Retention Function	351
Exercises	357

PART IV ADDITIONAL TOPICS

9

TIME SERIES ANALYSIS AND SYNTHESIS

362

- Introduction 362
- Components of a Time Series 364
- Moving-Average Filtering 365
- Autocorrelation Analysis 373
- Cross-Correlation Analysis 378
- Identification of the Random Component 380
- Formulation of Auto- and Cross-Correlation
Water Yield Models 380
- Autoregression and Cross-Regression 382
- Computational Example, 382*
- Application to Watershed Data, 384*
- Exercises 398
- References and Suggested Readings 401

10

SENSITIVITY ANALYSIS AND PROBABILISTIC
MODELING

403

- Introduction 403
- Mathematical Foundations of Sensitivity Analysis 404
- Definition, 404*
- The Sensitivity Equation, 404*
- Computational Methods, 405*
- Parametric and Component Sensitivity, 405*
- Absolute and Relative Sensitivity, 406*
- A Correspondence between Sensitivity and Correlation, 407*
- Time Variation of Sensitivity, 409*
- Sensitivity in Model Formulation 410
- Stability of an Optimum Solution 412
- Sensitivity of Initial Value Estimates 414
- Sensitivity and Data Error Analysis 416
- Limitations of Sensitivity Analysis 431

Probabilistic Modeling 432
 Exercises 438
 References and Suggested Readings 439

MULTIVARIATE MODELS 442

Introduction 442
 The Effect of Cross Correlation 444
 The Basis of Multivariate Analysis 444
 The Simple Two-Variable Relationship 445
 Multiple-Variable Relationships 448
Eigenvalue-Eigenvector Analysis of a Matrix, 448
Direct Solution of the Characteristic Equation, 449
Iterative Numerical Method, 452
Rotation of Axes, 453
Components Analysis, 456
Illustration of Principal Components Analysis, 458
 Components Regression 459
Factor Analysis, 477
 Nonlinear Analysis, 492
 Summary 504
 Exercises 505
 References and Suggested Readings 505

APPENDIX 508

INDEX 565
