

Contents

Preface	ix
1. Definition of a Game	1
1.1. General Notions	1
1.2. Games in Extensive Form	1
1.3. Strategies: The Normal Form	4
1.4. Equilibrium n -Tuples	5
1.5. The Monty Hall Game	7
Problems	9
2. Two-Person Zero-Sum Games	13
2.1. Zero-Sum Games	13
2.2. The Normal Form	14
2.3. Mixed Strategies	15
2.4. The Minimax Theorem	17
2.5. Computation of Optimal Strategies	24
2.6. Symmetric Games	30
Problems	31
3. Linear Programming	35
3.1. Introduction	35
3.2. Duality	36
3.3. Solution of Linear Programs	42
3.4. The Simplex Algorithm	43
3.5. The Simplex Algorithm (Continued)	48
3.6. Examples	52
3.7. Constrained Games	57
Problems	59
4. Infinite Games	63
4.1. Games with Countably many Strategies	63
4.2. Games on the Square	65

4.3.	Games with Continuous Kernel	66
4.4.	Concave–Convex Games	69
4.5.	Games of Timing	71
4.6.	Higher Dimensions	76
	Problems	82
5.	Multistage Games	87
5.1.	Behavioral Strategies	87
5.2.	Games of Exhaustion	88
5.3.	Stochastic Games	92
5.4.	Recursive Games	98
5.5.	Differential Games	100
	Problems	113
6.	Games with Incomplete Information	117
6.1.	Introduction: The One-Stage Signaling Model	117
6.2.	The Multistage Model	125
	Problems	144
7.	Utility Theory	147
7.1.	Ordinal Utility	147
7.2.	Lotteries	148
7.3.	Commodity Bundles	153
7.4.	Absolute Utility	154
	Problems	156
8.	Two-Person General-Sum Games	159
8.1.	Bimatrix Games (Noncooperative)	159
8.2.	Perfect Equilibrium Points	162
8.3.	Evolutionary Stable Systems	169
8.4.	Correlated Equilibria	178
	Problems	183
9.	Two-Person Cooperative Games	187
9.1.	The Bargaining Problem	187
9.2.	Threats	194
9.3.	Time-Restricted Bargaining	198
	Problems	205
10.	n -Person Games	207
10.1.	Noncooperative Games	207
10.2.	Cooperative Games	207
10.3.	Domination, Strategic Equivalence, and Normalization	210
10.4.	The Core	213
10.5.	Balanced Collections	219
	Problems	227

11. Stable Sets	229
11.1. Introduction	229
11.2. Properties of Stable Sets	235
11.3. Edgeworth Market Games—An Example	243
11.4. A Game with No Solutions	247
Problems	252
12. Indices of Power	255
12.1. The Shapley Value	255
12.2. Multilinear Extensions	260
12.3. The Banzhaf–Coleman Index of Power	273
12.4. The Presidential Election “Game”	286
12.5. The Coalition Value	294
Problems	303
13. The Bargaining Set and Related Concepts	305
13.1. The Bargaining Set	305
13.2. The Kernel	310
13.3. The Nucleolus	312
13.4. The Airport Game	324
Problems	331
14. Nonatomic Games	333
14.1. Games with a Continuum of Players	333
14.2. Values of Nonatomic Games	336
14.3. Internal Telephone Billing Rates — An Example	350
Problems	352
15. Games without Side Payments	355
15.1. Introduction	355
15.2. The Core	360
15.3. Market Games	375
15.4. Approaches to the Value	383
15.5. The Bargaining Sets	388
Problems	392
16. Spatial Games	395
16.1. The Core and Near-Core Solution Concepts	395
16.2. The Modified Power Index	402
Problems	411
17. Other Applications	413
17.1. Introduction	413
17.2. Single-Item Auctions	413
17.3. Mechanisms	417

17.4. Public Goods	421
17.5. Two-sided Matching Problems	424
	429
Appendix	433
A.1. Convexity	433
A.2. Fixed Point Theorems	436
Bibliography	437
Index	447
