

TABLE OF CONTENTS

Theme : Experience

Robustness of existing structures <i>Miroslav Sykora, Jana Markova, Milan Holicky and Karel Jung</i>	1
Robustness analysis of a timber structure with ductile behaviour in compression <i>Dean Čizmar, John D. Sørensen, Poul H. Kirkegaard and Vlatka Rajčić</i>	17
Robustness of structures: lessons from successes and failures <i>Jitendra Agarwal</i>	33

Theme : Principles

Robustness of structures – theoretical framework <i>John D. Sørensen</i>	43
Acceptance criteria <i>Enrico Rizzuto and Krzysztof Cichocki</i>	49

Theme : Exposures and vulnerability

Modelling of hazards <i>Ton Vrouwenvelder and Bernt J. Leira</i>	63
Catenary action in RC elements <i>Geoffrey Decan and Luc Taerwe</i>	75
Steel structures <i>Ulrike Kuhlmann, Lars Rölle, Bassam A. Izzuddin, Miguel Pereira, Christos Bisbos and Simos Gerasimidis</i>	85
Composite structures <i>Ulrike Kuhlmann, Lars Rölle, Marian Gizejowski, Lesław Kwasniewski, Wioleta Barcewicz, Bassam A. Izzuddin and Miguel Pereira</i>	99
Reliability analysis of ductility in steel structures <i>Max Gündel, Markus Feldmann and Ton Vrouwenvelder</i>	127

Theme : Exposures and vulnerability (continued)

Numerical analysis of frame systems in case of progressive collapse 139
Marcin Balcerzak, Leslaw Kwasniewski, Luis Costa Neves and Marian Gizejowski

Amplified Monte Carlo simulation methods for analysis of systems reliability 153
Bernt J. Leira and Arvid Næss

Theme : Assessment and implementation

Building failure consequences 169
Victoria Janssens, Dermot W O'Dwyer and Marios K Chryssanthopoulos

Consequences of failure: bridges 189
Boulent M. Imam and Marios K Chryssanthopoulos

SHM-based robustness: a super-tall structure case study 205
Raed Al-Saleh, Sara Casciati and Lucia Faravelli

Robustness aspects of CC3 buildings 231
Dimitris Diamantidis, Gerard Canisius and Vanessa Diamantidis

The cost of satisfying structural design requirements on progressive collapse resistance 241
Anastasios Kontogiannis and Dimos C. Charmpis
