

CONTENTS

The staff and the field of work	V
1. INTRODUCTION	1
2. STUDIES OF COMPONENTS OF ECOSYSTEMS OF RESERVOIRS AND THEIR INFLOWS	4
2.1. Substances dissolved and dispersed in water of reservoirs	4
2.2. Bacteria and BOD	7
2.2.1 Bacteria and BOD in the Římov Reser- voir and its tributaries	7
2.2.2 Bacteria and protozoans in the Římov Reservoir	9
2.2.3 Extracellular enzyme activities in microbial decomposition of organic matter	13
2.2.4 Incorporation of N-Acetyl- ¹⁴ C-glucos- amine into microorganisms in the Římov Reservoir	18
2.3. Phytoplankton	19
2.3.1 Cell volume of phytoflagellates in the Římov Reservoir	19
2.3.2 Clear water phase in the Římov Reser- voir	19
2.3.3 Role of phosphorus limitation in phytoplankton development in the Římov Reservoir	22
2.4. Zooplankton	24
2.4.1 Net zooplankton in the Slapy and Římov Reservoirs	24
2.4.2 Net zooplankton biomass: general course of the seasonal dynamics, 1976-1987 ..	25

2.5. Fish	27
2.5.1 Littoral fish-fry assemblage in the Řimov Reservoir	27
3. SPECIAL INVESTIGATIONS	30
3.1. Photoinitiated reactions of organic compounds related to natural waters	30
3.2. Screening of heavy metals in the Řimov Reservoir	30
3.3. ^{13}C -NMR, IR and UV spectroscopis analysis of dissolved organic matter in different waters	34
3.4. Ciliate feeding	35
3.5. Protozoan occurrence in lakes	37
3.6. Enhanced phosphate uptake by bacteria	40
3.7. The response of Daphnia to the fish-produced chemical stimuli	45
