

CONTENT

INTRODUCTION.....	2
1. BASIC RELATIONS.....	4
1.1 Continuity equation.....	4
1.2 Bernoulli's equation.....	5
1.3 Friction loss.....	7
1.4 Local Losses – Demonstrations.....	14
1.5 Useful Local Loss Applications.....	17
1.6 Unsteady flow.....	19
1.7 Dynamics of the pneumatic system.....	21
2. SUPERCRITICAL EXPANSION.....	24
2.1 Introduction.....	24
2.2 Theory.....	25
2.3 Operation in the non-computed mode.....	26
2.4 The second critical pressure ratio.....	28
2.5 Noise level.....	31
2.6 Diffuser flows.....	33
3. FREE FLOWS.....	36
3.1 Theory.....	36
3.2 Relay nozzles.....	39
3.3 Wall flows.....	43
3.4 Some free flow applications.....	46
4. EJECTORS.....	56
4.1 Theory.....	56
4.2 Suction.....	57
4.3 Influence of design parameters on ejector activity.....	58
4.4 Tensile force.....	61
4.5 Recirculating bubble.....	64
5. FLUID STRUCTURE INTERACTION.....	70
5.1 Interaction of free flows with the weaving reed wall.....	70
5.3 Flow around the moving surfaces.....	77
5.4 Nozzle for the production of fibrous layer.....	80

6. HOT AIR DRYING, VENTILATION.....	82
6.1 Theory.....	82
6.2 Hot air dryers.....	83
6.3 Ventilation.....	91
6.4 Thermal insulation of the facade.....	93
6.5 Solar facade.....	94
7. HEATING, COOLING.....	96
7.1 Microwave drying.....	96
7.2 Flue gas heater.....	96
7.4 Independent oil heating.....	98
7.5 Burner I.....	100
7.6 Burner II.....	101
7.7 Cooling the plastic.....	103
7.8 Heating the mold.....	106
8. NEXT TECHNICAL APPLICATIONS.....	110
8.1 Air permeability.....	110
8.2 Pressure agitations from vibrating board.....	122
8.3 Vortex valve.....	123
8.4 Compressed air.....	125
