Introduction

# Part I Protein Analytics

1	Protein Purification	3
1.1	Properties of Proteins	3
1.2	Protein Localization and Purification Strategy	6
1.3	Homogenization and Cell Disruption	7
1.4	Precipitation	9
1.5	Centrifugation	11
1.5.1	Basic Principles	12
1.5.2	Centrifugation Techniques	12
1.6	Removal of Salts and Hydrophilic Contaminants	15
1.7	Concentration	17
1.8	Detergents and their Removal	18
1.8.1	Properties of Detergents	18
1.8.2	Removal of Detergents	20
1.9	Sample Preparation for Proteome Analysis	22
	Further Reading	22
2	Protein determination	23
2.1	Quantitative Determination by Staining Tests	25
2.1.1	Biuret Assay	26
2.1.2	Lowry Assay	26
2.1.3	Bicinchoninic Acid Assay (BCA Assay)	27
2.1.4	Bradford Assay	28
2.2	Spectroscopic Methods	28
2.2.1	Measurements in the UV Range	29
2.2.2	Fluorescence Method	31
2.3	Radioactive Labeling of Peptides and Proteins	31
2.3.1	Iodinations	33
	Further Reading	33
3	Enzyme Activity Testing	35
3.1	The Driving Force behind Chemical Reactions	35
3.2	Rate of Chemical Reactions	36

Catalysts	37
	37
	38
	38
	39
Inhibitors	40
Competitive Inhibitors	40
	41
	41
	42
	42

	43
	43
Strength	43
Temperature	44
Substrate Concentration	44
Controls	45
Further Reading	45
Tune-Reserved Spaceway	
Microcalorimetry	47
Differential Scanning Calorimetry (DSC)	48
	54
	54
and Peripheral Binding	58
Pressure Perturbation Calorimetry (PPC)	61
Further Reading	62
Immunological Techniques	63
Antibodies	63
Antibodies and Immune Defense	63
Antibodies as Reagents	64
Properties of Antibodies	64
Functional Structure of IgG	66
Antigen Interaction at the Combining Site	67
Handling of Antibodies	68
Antigens	69
	Enzymes as Catalysts Rate of Enzyme-Controlled Reactions MichaelisMenten Theory Determination of $K_m$ and $V_{max}$ Inhibitors Competitive Inhibitors Non-competitive Inhibitors Test System Set-up Analysis of the Physiological Function Selecting the Substrates Detection System Time Dependence pH Value Selecting the Buffer Substance and the Ionic Strength Temperature Substrate Concentration Controls Further Reading <b>Microcalorimetry</b> Differential Scanning Calorimetry (DSC) Isothermal Titration Calorimetry (ITC) Ligand Binding to Proteins Binding of Molecules to Membranes: Insertion and Peripheral Binding Pressure Perturbation Calorimetry (PPC) Further Reading <b>Immunological Techniques</b> Antibodies Antibodies and Immune Defense Antibodies as Reagents Properties of Antibodies Functional Structure of IgG Antigen Interaction at the Combining Site Handling of Antibodies

х

24.4.5	Lipid Hormones and Intracellular Signaling	
	Molecules	633
24.5	Lipid Vitamins	638
24.6	Lipidome Analysis	640
24.7	Perspectives	642
	Further Reading	644
25	Analysis of Post-translational Modifications:	
	Phosphorylation and Acetylation of Proteins	645
25.1	Functional Relevance of Phosphorylation and	
	Acetylation	645
25.1.1	Phosphorylation	645
25.1.2	Acetylation	646
25.2	Strategies for the Analysis of Phosphorylated and	
	Acetylated Proteins and Peptides	647
25.3	Separation and Enrichment of Phosphorylated	
	and Acetylated Proteins and Peptides	649
25.4	Detection of Phosphorylated and Acetylated	
	Proteins and Peptides	651
25.4.1	Detection by Enzymatic, Radioactive,	
	Immunochemical, and Fluorescence Based	
	Methods	651
25.4.2	Detection of Phosphorylated and Acetylated	
	Proteins by Mass Spectrometry	653
25.5	Localization and Identification of	
	Post-translationally Modified Amino Acids	653
25.5.1	Localization of Phosphorylated and Acetylated	
	Amino Acids by Edman Degradation	654
25.5.2	Localization of Phosphorylated and Acetylated	
	Amino Acids by Tandem Mass Spectrometry	654
25.6	Quantitative Analysis of Post-translational	
	Modifications	659
25.7	Future of Post-translational Modification Analysis	661
	Further Reading	661

## Part IV Nucleic Acid Analytics

26	Isolation and Purification of Nucleic Acids	665
26.1	Purification and Determination of Nucleic Acid	
	Concentration	665
26.1.1	Phenolic Purification of Nucleic Acids	665
26.1.2	Gel Filtration	666
26.1.3	Precipitation of Nucleic Acids with Ethanol	667
26.1.4	Determination of the Nucleic Acid Concentration	668
26.2	Isolation of Genomic DNA	669
26.3	Isolation of Low Molecular Weight DNA	670
26.3.1	Isolation of Plasmid DNA from Bacteria	670
26.3.2	Isolation of Eukaryotic Low Molecular Weight	
	DNA	674
26.4	Isolation of Viral DNA	674
26.4.1	Isolation of Phage DNA	674
26.4.2	Isolation of Eukaryotic Viral DNA	675
26.5	Isolation of Single-Stranded DNA	676
26.5.1	Isolation of M13 Phage DNA	676
26.5.2	Separation of Single- and Double-Stranded DNA	676

26.6	Isolation of RNA	676
26.6.1	Isolation of Cytoplasmic RNA	677
26.6.2	Isolation of Poly(A) RNA	678
26.6.3	Isolation of Small RNA	679
26.7	Isolation of Nucleic Acids using Magnetic Particles	679
26.8	Lab-on-a-chip	680
	Further Reading	680
	a Biotron Microsome with a these Processing	
27	Analysis of Nucleic Acids	681
27.1	Restriction Analysis	681
27.1.1	Principle of Restriction Analyses	681
27.1.2	Historical Overview	682
27.1.3	Restriction Enzymes	682
27.1.4	In Vitro Restriction and Applications	685
27.2	Electrophoresis	690
27.2.1	Gel Electrophoresis of DNA	691
27.2.2	Gel Electrophoresis of RNA	697
27.2.3	Pulsed-Field Gel Electrophoresis (PFGE)	698
27.2.4	Two-Dimensional Gel Electrophoresis	700
27.2.5	Capillary Gel Electrophoresis	701
27.3	Staining Methods	702
27.3.1	Fluorescent Dyes	702
27.3.2	Silver Staining	704
27.4	Nucleic Acid Blotting	704
27.4.1	Nucleic Acid Blotting Methods	704
27.4.2	Choice of Membrane	704
27.4.3	Southern Blotting	705
27.4.4	Northern Blotting	706
27.4.5	Dot- and Slot-Blotting	707
27.4.6	Colony and Plaque Hybridization	707
27.5	Isolation of Nucleic Acid Fragments	708
27.5.1	Purification using Glass Beads	708
27.5.2	Purification using Gel Filtration or Reversed Phase	708
27.5.3	Purification using Electroelution	708
27.5.4	Other Methods	709
27.6	LC-MS of Oligonucleotides	709
27.6.1	Principles of the Synthesis of Oligonucleotides	709
27.6.2	Investigation of the Purity and Characterization of	
	Oligonucleotides	711
27.6.3	Mass Spectrometric Investigation of	
	Oligonucleotides	712
27.6.4	IP-RP-HPLC-MS Investigation of a	
	Phosphorothioate Oligonucleotide	714
	Further Reading	717
	Industriation Francisco and and francisco	
28	Techniques for the Hybridization and Detection	
	of Nucleic Acids	719
28.1	Basic Principles of Hybridization	720
28.1.1	Principle and Practice of Hybridization	721
28.1.2	Specificity of the Hybridization and Stringency	722
28.1.3	Hybridization Methods	723
28.2	Probes for Nucleic Acid Analysis	729
28.2.1	DNA Probes	730
28.2.2	RNA Probes	731
28.2.3	PNA Probes	732
28.2.4	LNA Probes	732
28.3	Methods of Labeling	733
28.3.1	Labeling Positions	733

28.3.2	Enzymatic Labeling	735
28.3.3	Photochemical Labeling Reactions	737
28.3.4	Chemical Labeling	737
28.4	Detection Systems	738
28.4.1	Staining Methods	738
28.4.2	Radioactive Systems	738
28.4.3	Non-radioactive Systems	739
28.5	Amplification Systems	750
28.5.1	Target Amplification	751
28.5.2	Target-Specific Signal Amplification	751
28.5.3	Signal Amplification	752
20.0.0	Further Reading	753
-	Palamanas Chain Pagation	755
29	Polymerase Chain Reaction	
29.1	Possibilities of PCR	755
29.2	Basics	756
29.2.1	Instruments	756
29.2.2	Amplification of DNA	758
29.2.3	Amplification of RNA (RT-PCR)	761
29.2.4	Optimizing the Reaction	763
29.2.5	Quantitative PCR	763
29.3	Special PCR Techniques	766
29.3.1	Nested PCR	766
29.3.2	Asymmetric PCR	767
29.3.3	Use of Degenerate Primers	767
29.3.4	Multiplex PCR	767
29.3.5	Cycle sequencing	768
29.3.6	In Vitro Mutagenesis	768
29.3.7	Homogeneous PCR Detection Procedures	768
29.3.8	Quantitative Amplification Procedures	769
29.3.9	In Situ PCR	769
29.3.10	Other Approaches	769
29.4	Contamination Problems	770
29.4.1	Avoiding Contamination	770
29.4.2	Decontamination	771
29.5	Applications	772
29.5.1	Detection of Infectious Diseases	772
29.5.2	Detection of Intectious Diseases	773
29.5.3	The Human Genome Project	776
29.6		777
29.6.1	Alternative Amplification Procedures	111
29.0.1	Nucleic Acid Sequence-Based Amplification	
20.62	(NASBA)	777
29.6.2	Strand Displacement Amplification (SDA)	777
29.6.3	Helicase-Dependent Amplification (HDA)	777
29.6.4	Ligase Chain Reaction (LCR)	779
29.6.5	Qβ Amplification	780
29.6.6	Branched DNA Amplification (bDNA)	782
29.7	Prospects	782
	Further Reading	782
30	DNA Sequencing	785
30.1	Gel-Supported DNA Sequencing Methods	786
30.1.1	Sequencing according to Sanger: The Dideoxy	
GEV	Method	789
30.1.2	Labeling Techniques and Methods of Verification	796
30.1.3	Chemical Cleavage according to Maxam and	150
	Gilbert	800
		000

30.2	Gel-Free DNA Sequencing Methods - The Next	
	Generation	806
30.2.1	Sequencing by Synthesis	807
30.2.2	Single Molecule Sequencing	813
	Further Reading	815
31	Analysis of Epigenetic Modifications	817
31.1	Overview of the Methods to Detect	
	DNA-Modifications	818
31.2	Methylation Analysis with the Bisulfite Method	819
31.2.1	Amplification and Sequencing of	
	Bisulfite-Treated DNA	819
31.2.2	Restriction Analysis after Bisulfite PCR	820
31.2.3	Methylation Specific PCR	822
31.3	DNA Analysis with Methylation Specific	
	Restriction Enzymes	823
31.4	Methylation Analysis by Methylcytosine-Binding	
	Proteins	825
31.5	Methylation Analysis by Methylcytosine-Specific	
	Antibodies	826
31.6	Methylation Analysis by DNA Hydrolysis and	
	Nearest Neighbor-Assays	827
31.7	Analysis of Epigenetic Modifications of Chromatin	
31.8	Chromosome Interaction Analyses	828
31.9	Outlook	829
	Further Reading	829
32	Protein-Nucleic Acid Interactions	831
32.1	DNA–Protein Interactions	831
32.1.1	Basic Features for DNA–Protein Recognition:	001
52.1.1	Double-Helical Structures	831
32.1.2	DNA Curvature	832
32.1.3	DNA Topology	833
32.2	DNA-Binding Motifs	835
32.3	Special Analytical Methods	836
32.3.1	Filter Binding	836
32.3.2	Gel Electrophoresis	836
32.3.3	Determination of Dissociation Constants	839
32.3.4	Analysis of DNA–Protein Complex Dynamics	840
32.4	DNA Footprint Analysis	841
32.4.1	DNA Labeling	843
32.4.2		843
32.4.3		844
32.4.4	Chemical Reagents for the Modification of	
	DNA-Protein Complexes	846
32.4.5	Interference Conditions	848
32.4.6		849
32.4.7		850
32.5		851
32.5.1		851
32.5.2		851
32.5.3		852
32.5.4		853
32.5.5		853
32.5.6		854
32.5.7		855
32.5.8		856
32.6		856

#### XI

32.6.1	Functional Diversity of RNA	856
32.6.2	RNA Secondary Structure Parameters and unusual	
	Base Pairs	857
32.6.3	Dynamics of RNA-Protein Interactions	857
32.7	Characteristic RNA-Binding Motifs	859
32.8	Special Methods for the Analysis of RNA-Protein	
	Complexes	860
32.8.1	Limited Enzymatic Hydrolyses	861
32.8.2	Labeling Methods	861
32.8.3	Primer Extension Analysis of RNA	862
32.8.4	Customary RNases	862
32.8.5	Chemcal Modification of RNA-Protein	
	Complexes	863
32.8.6	Chemical Crosslinking	866
32.8.7	Incorporation of Photoreactive Nucleotides	867
32.8.8	Genome-Wide Identification of Transcription Start	t
	Sites (TSS)	867
32.9	Genetic Methods	868
32.9.1	Tri-hybrid Method	868
32.9.2	Aptamers and the Selex Procedure	869
32.9.3	Directed Mutations within Binding Domains	870
	Further Reading	870

## Part V Functional and Systems Analytics

33	Sequence Data Analysis	875
33.1	Sequence Analysis and Bioinformatics	875
33.2	Sequence: An Abstraction for Biomolecules	876
33.3	Internet Databases and Services	877
33.3.1	Sequence Retrieval from Public Databases	878
33.3.2	Data Contents and File Format	879
33.3.3	Nucleotide Sequence Management in the	
	Laboratory	881
33.4	Sequence Analysis on the Web	881
33.4.1	EMBOSS	881
33.5	Sequence Composition	882
33.6	Sequence Patterns	882
33.6.1	Transcription Factor Binding Sites	884
33.6.2	Identification of Coding Regions	885
33.6.3	Protein Localization	886
33.7	Homology	887
33.7.1	Identity, Similarity, Homology	887
33.7.2	Optimal Sequence Alignment	888
33.7.3	Alignment for Fast Database Searches: BLAST	890
33.7.4	Profile-Based Sensitive Database Search:	
	PSI-BLAST	890
33.7.5	Homology Threshold	891
33.8	Multiple Alignment and Consensus	
	Sequences	891
33.9	Structure Prediction	892
33.10	Outlook	893
34	Analysis of Promoter Strength and Nascent	
	RNA Synthesis	895
34.1	Methods for the Analysis of RNA Transcripts	895

34.1.1	Overview	895
34.1.2	Nuclease S1 Analysis of RNA	896
34.1.3	Ribonuclease-Protection Assay (RPA)	898
34.1.4	Primer Extension Assay	901
34.1.5	Northern Blot and Dot- and Slot-Blot	902
34.1.6	Reverse Transcription Polymerase Chain Reaction	
	(RT-PCR and RT-qPCR)	904
34.2	Analysis of RNA Synthesis In Vivo	905
34.2.1	Nuclear-run-on Assay	905
34.2.2	Labeling of Nascent RNA with 5-Fluoro-uridine	
	(FUrd)	906
34.3	In Vitro Transcription in Cell-Free Extracts	907
34.3.1	Components of an In Vitro Transcription	
	Assay	907
34.3.2	Generation of Transcription-Competent Cell	
	Extracts and Protein Fractions	908
34.3.3	Template DNA and Detection of In Vitro	
	Transcripts	908
34.4	In Vivo Analysis of Promoter Activity in	
	Mammalian Cells	911
34.4.1	Vectors for Analysis of Gene-Regulatory	
	cis-Elements	911
34.4.2	Transfer of DNA into Mammalian Cells	912
34.4.3	Analysis of Reporter Gene Expression	914
	Further Reading	916

35	Fluorescent In Situ Hybridization in Molecular	
	Cytogenetics	917
35.1	Methods of Fluorescent DNA Hybridization	917
35.1.1	Labeling Strategy	917
35.1.2	DNA Probes	918
35.1.3	Labeling of DNA Probes	918
35.1.4	In Situ Hybridization	919
35.1.5	Evaluation of Fluorescent Hybridization Signals	920
35.2	Application: FISH and CGH	920
35.2.1	FISH Analysis of Genomic DNA	920
35.2.2	Comparative Genomic Hybridization (CGH)	921
	Further Reading	924
36	Physical and Genetic Mapping of Genomes	925
36.1	Genetic Mapping: Localization of Genetic	
	Markers within the Genome	925
36.1.1	Recombination	925
36.1.2	Genetic Markers	927
36.1.3	Linkage Analysis - the Generation of Genetic	
	Maps	929
36.1.4	Genetic Map of the Human Genome	931
36.1.5	Genetic Mapping of Disease Genes	932
36.2	Physical Mapping	932
36.2.1	Restriction Mapping of Whole Genomes	932
36.2.2	Mapping of Recombinant Clones	934
36.2.3	Generation of a Physical Map	935
36.2.4	Identification and Isolation of Genes	937
36.2.5	Transcription Maps of the Human Genome	939
36.2.6	Genes and Hereditary Disease - Search for	
	Mutations	940
36.3	Integration of Genome Maps	940

### XII

36.4	The Human Genome	942
	Further Reading	942

XIII

#### XIV Table of Contents

42.2.5	Switching Biological Systems on and off with	
	Small Organic Molecules	1051
42.3	Expressed Protein Ligation - Symbiosis of	
	Chemistry and Biology for the Study of Protein	
	Functions	1052
42.3.1	Analysis of Lipid-Modified Proteins	1052
42.3.2	Analysis of Phosphorylated Proteins	1054
42.3.3	Conditional Protein Splicing	1054
	Further Reading	1055
43	Toponome Analysis	1057
	"Life is Spatial"	1057
43.1	Antibody Based Toponome Analysis using	
	Imaging Cycler Microscopy (ICM)	1057
43.1.1	Concept of the Protein Toponome	1058
43.1.2	Imaging Cycler Robots: Fundament of	
	a Toponome Reading Technology	1059
43.1.3	Summary and Outlook	1063
	Acknowledgements	1063
43.2	Mass Spectrometry Imaging	1064
43.2.1	Analytical Microprobes	1064
43.2.2	Mass Spectrometric Pixel Images	1064

43.2.3	Achievable Spatial Resolution	1065
43.2.4	SIMS, ME-SIMS, and Cluster SIMS Imaging:	
	Enhancing the Mass Range	1067
43.2.5	Lateral Resolution and Analytical Limit of	
	Detection	1067
43.2.6	Coarse Screening by MS Imaging	1068
43.2.7	Accurate MALDI Mass Spectrometry Imaging	1068
43.2.8	Identification and Characterization of Analytes	1069
	Further Reading	1070
Appen	dix 1: Amino Acids and Posttranslational	
Modifi	cations	1073
1203.1		
Appen	dix 2: Symbols and Abbreviations	1075
4	dix 3: Standard Amino Acids	
	and one letter code)	1081
(urree )	and one letter code)	1001
Appen	dix 4: Nucleic Acid Bases	1083
	Repeate Mentionizers	
Index		1085
