Introduction	1
<b>1. Geometric Foundations</b>	<b>7</b>
Manifolds	7
Functions	10
Submanifolds	13
Vector Fields	17
Lie Brackets	21
The Differential	22
Differential Forms	23
Equivalence of Differential Forms	29
<b>2. Lie Groups</b>	<b>32</b>
Transformation Groups	35
Invariant Subsets and Equations	39
Canonical Forms	42
Invariant Functions	44
Lie Algebras	48
Structure Constants	51
The Exponential Map	52
Subgroups and Subalgebras	53
Infinitesimal Group Actions	55
Classification of Group Actions	58
Infinitesimal Invariance	62
Invariant Vector Fields	65
Lie Derivatives and Invariant Differential Forms	68
The Maurer–Cartan Forms	71
<b>3. Representation Theory</b>	<b>75</b>
Representations	75
Representations on Function Spaces	78
Multiplier Representations	81
Infinitesimal Multipliers	85

Relative Invariants	91
Classical Invariant Theory	95
<b>4. Jets and Contact Transformations</b>	<b>105</b>
Transformations and Functions	106
Invariant Functions	109
Jets and Prolongations	111
Total Derivatives	115
Prolongation of Vector Fields	117
Contact Forms	121
Contact Transformations	125
Infinitesimal Contact Transformations	129
Classification of Groups of Contact Transformations	134
<b>5. Differential Invariants</b>	<b>136</b>
Differential Invariants	136
Dimensional Considerations	139
Infinitesimal Methods	141
Stabilization and Effectiveness	143
Invariant Differential Operators	146
Invariant Differential Forms	153
Several Dependent Variables	157
Several Independent Variables	164
<b>6. Symmetries of Differential Equations</b>	<b>175</b>
Symmetry Groups and Differential Equations	175
Infinitesimal Methods	178
Integration of Ordinary Differential Equations	187
Characterization of Invariant Differential Equations	191
Lie Determinants	199
Symmetry Classification of Ordinary Differential Equations	202
A Proof of Finite Dimensionality	206
Linearization of Partial Differential Equations	209
Differential Operators	211
Applications to the Geometry of Curves	218
<b>7. Symmetries of Variational Problems</b>	<b>221</b>
The Calculus of Variations	222
Equivalence of Functionals	227
Invariance of the Euler–Lagrange Equations	230
Symmetries of Variational Problems	235

Invariant Variational Problems	238
Symmetry Classification of Variational Problems	240
First Integrals	242
The Cartan Form	244
Invariant Contact Forms and Evolution Equations	246
<b>8. Equivalence of Coframes</b>	252
Frames and Coframes	252
The Structure Functions	256
Derived Invariants	259
Classifying Functions	261
The Classifying Manifolds	266
Symmetries of a Coframe	274
Remarks and Extensions	276
<b>9. Formulation of Equivalence Problems</b>	280
Equivalence Problems Using Differential Forms	280
Coframes and Structure Groups	287
Normalization	291
Overdetermined Equivalence Problems	297
<b>10. Cartan's Equivalence Method</b>	304
The Structure Equations	304
Absorption and Normalization	307
Equivalence Problems for Differential Operators	310
Fiber-preserving Equivalence of Scalar Lagrangians	321
An Inductive Approach to Equivalence Problems	327
Lagrangian Equivalence under Point Transformations	328
Applications to Classical Invariant Theory	333
Second Order Variational Problems	337
Multi-dimensional Lagrangians	342
<b>11. Involution</b>	347
Cartan's Test	350
The Transitive Case	355
Divergence Equivalence of First Order Lagrangians	357
The Intrinsic Method	358
Contact Transformations	361
Darboux' Theorem	364
The Intransitive Case	366
Equivalence of Nonclosed Two-Forms	367

<b>12. Prolongation of Equivalence Problems</b>	372
The Determinate Case	373
Equivalence of Surfaces	377
Conformal Equivalence of Surfaces	385
Equivalence of Riemannian Manifolds	386
The Indeterminate Case	394
Second Order Ordinary Differential Equations	397
<b>13. Differential Systems</b>	409
Differential Systems and Ideals	409
Equivalence of Differential Systems	415
Vector Field Systems	416
<b>14. Frobenius' Theorem</b>	421
Vector Field Systems	421
Differential Systems	427
Characteristics and Normal Forms	428
The Technique of the Graph	431
Global Equivalence	440
<b>15. The Cartan-Kähler Existence Theorem</b>	447
The Cauchy-Kovalevskaya Existence Theorem	447
Necessary Conditions	449
Sufficient Conditions	455
Applications to Equivalence Problems	460
Involutivity and Transversality	465
Tables	472
References	477
Symbol Index	490
Author Index	499
Subject Index	504
