Contents

Introduction 5

1 State of degradation chlorophenol at home and in the world 7

1.1 Properties of chlorophenol 9

1.2 Description of contemporary method of degradation of chlorophenol 10

1.3 Use of sorption methods to remove the investigated pollutant 14

1.3.1 Low cost alternate sorbents 14

2 Main goals 17

3 Characteristics of selected low-cost sorbents 18

3.1 Lemna minor 18

3.2 Red mud 20

3.3 Black nickel mud 22

4 Work methodology and method of examination 24

4.1 Methods of preparation of selected sorbents 25

4.2 Experimental device description 28

4.2.1 Gas Chromatography-Mass Spectrometry 28

4.2.2 FTIR spectrometry 30

5 Results 33

5.1 Analytical methods for determining the loss of chlorophenol 33

5.2 Structural analysis of sorbent samples 33

5.2.1 Scanning electron microscopy associated with EDX spectrometry (SEM – EDX) 34

5.2.2 SEM analysis results 34

5.2.3 FTIR analysis 37

5.3 Determination of 3,5-dichlorophenol loss using gas chromatography 40

5.3.1 Effect of the 3,5-dichlorophenol sorbent amount on sorption 41

5.3.2 Determination of loss of 3,5-dichlorophenol by gas chromatography 54

5.3.3 The effect of temperature on 3,5-dichlorophenol sorption (0.5g) *54*

5.3.4 The effect of temperature on 3,5-dichlorophenol sorption (2.0g) *63*

6 Discusion **74**

Conclusion **84**

Summary **86**
