

# CONTENTS

Foreword	V
Preface	VII
INTRODUCTION: Endeavours to ascertain the present-day knowledge of biomedical problems (G. Mchedlishvili)	1
CHAPTER 1	
INVOLVEMENT OF CIRCULATORY FACTORS IN THE MECHANISM OF BRAIN EDEMA DEVELOPMENT	
Introduction (G. Mchedlishvili and J. Cervós-Navarro)	11
Discussion	19
1.1. Role of arterial pressure	19
1.2. Role of venous pressure	28
1.3. Cerebral blood volume and edema development	38
1.4. Cerebral blood flow changes related to cerebrovascular resistance during edema development	45
1.5. Diameter of cerebral capillaries during edema	54
1.6. Rheological properties of blood	61
1.7. Specific changes of cerebral microcirculation causing edema development	67
1.8. Blood osmolarity and brain edema	70
1.9. Concluding remarks on involvement of circulatory factors	78

## CHAPTER 2

### INVOLVEMENT OF THE BLOOD-BRAIN BARRIER IN MECHANISMS OF BRAIN EDEMA DEVELOPMENT

Introduction (I.Klatzo)	83
Introduction (I.V.Gannushkina)	92
Discussion	99
2.1. Water and electrolyte transport	99
2.2. Tight junctions of endothelial cells	104
2.3. Vesicular transport across endothelial cells	111
2.4. Other structures involved in blood-brain barrier function	118
2.5. Relationship between water and protein transfer across the barrier	122
2.6. Mechanisms of blood-brain barrier changes	129
2.7. Functional significance of blood-brain barrier disturbances	136
2.8. Concluding remarks on involvement of blood- brain barrier factor	140

## CHAPTER 3

### INVOLVEMENT OF TISSUE FACTORS IN THE MECHANISM OF BRAIN EDEMA DEVELOPMENT

Introduction (K.-A.Hossmann)	150
Introduction (A.M.Gurvitch)	159
Discussion	167
3.1. Interstitial spaces	167
3.2. Tissue osmolarity	172
3.3. Effect of blood-born substances	179
3.4. Changes in neurons and glial cells	183
3.5. Mechanical properties of brain tissue	195
3.6. Spreading of edema	212
3.7. Effect of active substances	221
3.8. Resolution of edema	225
3.9. Vasogenic and cytotoxic edemas	231

3.10. Concluding remarks on involvement of tissue factors	237
---	-----

#### CHAPTER 4

#### INTERRELATIONSHIP OF VARIOUS FACTORS IN MECHANISM OF BRAIN EDEMA DEVELOPMENT

Introduction (M.Mossakowski)	242
Introduction (V.Gabashvili)	243
4.1. Clinical aspects of brain edema	246
4.2. Integral consideration of pathophysiological mechanisms operating in brain edema development and resolution	257
4.3. Pathogenesis of posthypertensive brain edema	264
4.4. Traumatic brain edema	267
4.5. Experimental peritumoral edema	268
4.6. Comments on mechanism of water accumulation in brain tissue	273
4.7. Transport of substances across the cerebral vessel walls	274
4.8. Role of cyclic nucleotides in transendothelial macromolecular transport	280
4.9. Mechanisms underlying functional disturbances in traumatized brain	282
4.10. Secondary events accompanying brain trauma	287
4.11. Pathogenesis of traumatic brain edema	290
4.12. Dynamics of development and resolution of postischemic brain edema	292
4.13. Cerebral capillary and parenchymatous factors participating in the formation and progression of brain edema	295
4.14. The ischemic brain edema	299
4.15. Mechanisms of cytotoxic brain edema development	301
4.16. Ischemic brain swelling	306
