1	General	3
1.1	Scope	3
1.1.1	Scope of Eurocode 4	3
1.1.2	Scope of Part 1-1 of Eurocode 4	3
1.2	Normative references	3
1.3	Assumptions	4
1.4	Distinctions between principles and application rules	4
1.5	Definition	4
1.5.1	General	4
1.5.2	Additional terms	4
1.6	Symbols	5
2	Basis of design	5
2.1	Requirements	5
2.2	Principles of limit states	5
2.3	Basic variables	5
2.3.1	Actions	5
2.3.2	Material and product properties	5
2.3.3	Classification of actions	5
2.4	Verification by the partial factor method	5
2.4.1	Design values	6
2.4.2	Combination of actions	6
2.4.3	Verification of static equilibrium (EQU)	6
3	Materials	6
3.1	Concrete	6
3.2	Reinforced steel	6
3.3	Structural steel	7
3.4	Connecting devices	7
3.4.1	General	7
3.4.2	Headed stud shear connector	8
3.5	Profiled steel sheeting for composite slabs in buildings	8
4	Durability	8
4.1	General	8
4.2	Profiled steel sheeting for composite slabs in buildings	8
5	Structural analysis	8
5.1	Structural modeling for analysis	8
5.1.1	Structural modeling and basic assumptions	8
5.1.2	Joint modeling	8
5.1.3	Ground-structure interaction	8
5.2	Structural stability	8
5.2.1	Effects of deformed geometry of the structure	8
5.2.2	Methods of analysis for buildings	9
5.3	Imperfections	10
5.3.1	Basis	10
5.3.2	Imperfections for buildings	10
5.4	Calculation of action effects	10
5.4.1	Methods of global analysis	10
5.4.2	Linear elastic analysis	11
5.4.3	Non-linear global analysis	12
5.4.4	Linear elastic analysis with limited redistribution	12

5.4.5 Rigid plastic global analysis for buildings	13
5.5 Classification of cross-sections	13
5.5.1 General	13
5.5.2 Classification of composite sections without encasement	13
5.5.3 Classification of steel flanges in compression	13
6 Ultimate limit states.....	13
6.1 Beams	13
6.1.1 Beams for buildings	13
6.1.2 Effective width for verification of cross-sections	15
6.2 Resistences of cross-sections of beams	15
6.2.1 Bending resistance	15
6.2.2 Resistance to vertical shear	18
6.3 Resistance of cross-sections of beams with partial encasement	19
6.3.1 Scope	19
6.3.2 Bending resistance.....	20
6.3.3 Resistance to vertical shear	20
6.3.4 Bending and vertical shear	20
6.4 Lateral-torsional buckling of composite beams	20
6.4.1 General	20
6.4.2 Verification of LT buckling of continuous beams	20
6.4.3 Simplified verification for buildings	21
6.5 Transverse forces on webs	22
6.5.1 General	22
6.5.2 Flange induced buckling of webs	22
6.6 Shear connection	22
6.6.1 General	22
6.6.2 Longitudinal shear force in beams for buildings.....	23
6.6.3 Headed stud connectors in solid slabs.....	23
6.6.4 Design resistance of headed studs with profiled sheeting.....	24
6.6.5 Detailing of shear connection.....	27
6.6.6 Longitudinal shear in concrete slabs	28
6.7 Composite columns	29
6.7.1 General	29
6.7.2 General method of design	30
6.7.3 Simplified method of design	30
6.7.4 Shear connection and load introduction	36
6.7.5 Detailing	36
6.8 Fatigue	36
6.8.1 General	36
6.8.2 Partial factors for fatigue assessment in buildings	36
6.8.3 Fatigue strength.....	36
6.8.4 Internal forces and fatigue loading.....	36
6.8.5 Stresses	37
6.8.6 Stress ranges.....	37
6.8.7 Fatigue assessment based on nominal stress ranges.....	37
7 Serviceability limit states	38
7.1 General	38
7.2 Stresses	38
7.2.1 General	38
7.2.2 Stress limitation for buildings	38

7.3 Deformations in buildings	38
7.3.1 Deflections	38
7.3.2 Vibration.....	39
7.4 Cracking of concrete	39
7.4.1 General	39
7.4.2 Minimum reinforcement	39
7.4.3 Control cracking due to direct loading.....	40
8 Composite joints in frames for buildings	40
8.1 Scope	40
8.2 Analysis, modeling and classification.....	41
8.2.1 General	41
8.2.2 Elastic global analysis	41
8.2.3 Classification of joints.....	41
8.3 Design methods	41
8.3.1 Basis and scope	41
8.3.2 Resistance.....	41
8.3.3 Rotational stiffness.....	41
8.3.4 Rotation capacity.....	42
8.4 Resistance of components	42
8.4.1 Scope	42
8.4.2 Basic joint components	42
8.4.3 Column web in transverse compression.....	42
8.4.4 Reinforced components.....	42
9 Composite slabs with profiled steel sheeting for buildings.....	42
9.1 General	42
9.1.1 Scope	42
9.1.2 Definitions.....	43
9.2 Detailing.....	43
9.2.1 Slab thickness and reinforcement.....	43
9.2.2 Aggregate	43
9.2.3 Bearing requirements	44
9.3 Actions and action effects	44
9.3.1 Design situations	44
9.3.2 Actions for profiled steel sheeting as shuttering	44
9.3.3 Actions for composite slab.....	45
9.4 Analysis for internal forces and moments.....	45
9.4.1 Profiled steel sheeting as shuttering	45
9.4.2 Analysis of composite slab.....	45
9.4.3 Effective width of composite slab for concentrated load.....	45
9.5 Verification of profiled sheeting for ULS	46
9.6 Verification of profiled sheeting for SLS.....	46
9.7 Verification of concrete slab for ULS	46
9.7.1 Design criterion	46
9.7.2 Bending	46
9.7.3 Longitudinal shear for slabs without end anchorage.....	47
9.7.4 Longitudinal shear for slabs with end anchorage.....	48
9.7.5 Vertical shear.....	48
9.7.6 Punching shear	48
9.8 Verification of composite slab for SLS.....	48
9.8.1 Cracking of concrete	48

9.8.2 Deflection	49
Annex A	49
Annex B	49
Annex C	51
