<i>Preface</i>	vii
<i>About the Authors</i>	ix
1 Equilibrium Electrochemistry and the Nernst Equation	1
1.1 Chemical Equilibrium	1
1.2 Electrochemical Equilibrium: Introduction	5
1.3 Electrochemical Equilibrium: Electron Transfer at the Solution–Electrode Interface	9
1.4 Electrochemical Equilibrium: The Nernst Equation	11
1.5 Walther Hermann Nernst	17
1.6 Reference Electrodes and the Measurement of Electrode Potentials	19
1.7 The Hydrogen Electrode as a Reference Electrode	26
1.8 Standard Electrode Potentials and Formal Potentials	27
1.9 Formal Potentials and Experimental Voltammetry	30
1.10 Electrode Processes: Kinetics vs. Thermodynamics	32
References	34
2 Electrode Kinetics	37
2.1 Currents and Reaction Fluxes	37
2.2 Studying Electrode Kinetics Requires Three Electrodes	39
2.3 Butler–Volmer Kinetics	42
2.4 Standard Electrochemical Rate Constants and Formal Potentials	45
2.5 The Need for Supporting Electrolyte	47
2.6 The Tafel Law	48
2.7 Julius Tafel	49
2.8 Multistep Electron Transfer Processes	51

2.9	Tafel Analysis and the Hydrogen Evolution Reaction	54
2.10	B. Stanley Pons	59
2.11	Cold Fusion — The Musical!	60
2.12	Why Are Some Standard Electrochemical Rate Constants Large but Others Slow? The Marcus Theory of Electron Transfer: An Introduction	62
2.13	Marcus Theory: Taking it Further. Inner and Outer Sphere Electron Transfer	68
2.14	Marcus Theory: Taking it Further. Adiabatic and Non-Adiabatic Reactions	69
2.15	Marcus Theory: Taking it Further. Calculating the Gibbs Energy of Activation	72
2.16	Relationship between Marcus Theory and Butler–Volmer Kinetics	75
2.17	Marcus Theory and Experiment. Success!	76
2.18	Extending Marcus–Hush Theory: The Fermi–Dirac Distribution of Electrons. Symmetric vs. Asymmetric Marcus–Hush Theory	78
	References	82
3	Diffusion	83
3.1	Fick’s 1st Law of Diffusion	83
3.2	Fick’s 2nd Law of Diffusion	85
3.3	The Molecular Basis of Fick’s Laws	87
3.4	How Did Fick Discover His Laws?	89
3.5	The Cottrell Equation: Solving Fick’s 2nd Law	94
3.6	The Cottrell Problem: The Case of Unequal Diffusion Coefficients	98
3.7	The Nernst Diffusion Layer	100
3.8	Mass Transfer vs. Electrode Kinetics: Steady-State Current-Voltage Waveshapes	103
3.9	Mass Transport Corrected Tafel Relationships	106
	References	111
4	Cyclic Voltammetry at Macroelectrodes	113
4.1	Cyclic Voltammetry: The Experiment	113
4.2	Cyclic Voltammetry: Solving the Transport Equations	115
4.3	Cyclic Voltammetry: Reversible and Irreversible Kinetics	117
4.4	What Dictates ‘Reversible’ and ‘Irreversible’ Behaviour?	125

4.5	Reversible and Irreversible Behaviour: The Effect of Voltage Scan Rate	126
4.6	Reversible vs. Irreversible Voltammetry: A Summary	132
4.7	The Measurement of Cyclic Voltammograms: Five Practical Considerations	133
4.8	The Effect of Unequal Diffusion Coefficients, $D_A \neq D_B$	137
4.9	Multiple Electron Transfer: Reversible Electrode Kinetics	140
4.10	Multiple Electron Transfer: Irreversible Electrode Kinetics	149
4.11	The Influence of pH on Cyclic Voltammetry	154
4.12	The Scheme of Squares	158
4.13	Simultaneous Two-Electron Transfer in Electrode Kinetics?	159
	References	162
5	Voltammetry at Microelectrodes	163
5.1	The Cottrell Equation for a Spherical or Hemispherical Electrode	163
5.2	Potential Step Transients at Microdisc Electrodes	168
5.3	Microelectrodes Have Large Current Densities and Fast Response Times	169
5.4	Applications of Potential Step Chronoamperometry Using Microdisc Electrodes	171
5.5	Double Potential Step Microdisc Chronoamperometry Exploring the Diffusion Coefficient of Electrogenenerated Species	174
5.6	Cyclic and Linear Sweep Voltammetry Using Microdisc Electrodes	182
5.7	Steady-State Voltammetry at the Microdisc Electrode	192
5.8	Microelectrodes vs. Macroelectrodes	193
5.9	Ultrafast Cyclic Voltammetry: Megavolts per Second Scan Rates	197
5.10	Ultrasmall Electrodes: Working at the Nanoscale	198
	References	201
6	Voltammetry at Heterogeneous Surfaces	203
6.1	Partially Blocked Electrodes	203
6.2	Microelectrode Arrays	219
6.3	Voltammetry at Highly Ordered Pyrolytic Graphite Electrodes	225
6.4	Electrochemically Heterogeneous Electrodes	229
6.5	Electrodes Covered with Porous Films	232

6.6	Voltammetric Particle Sizing	235
6.7	Scanning Electrochemical Microscopy (SECM)	239
	References	243
7	Cyclic Voltammetry: Coupled Homogeneous Kinetics and Adsorption	245
7.1	Homogeneous Coupled Reactions: Notation and Examples . . .	245
7.2	Modifying Fick's Second Law to Allow for Chemical Reaction	247
7.3	Cyclic Voltammetry and the EC Reaction	248
7.4	How Do the Parameters K_1 and Λ Emerge?	252
7.5	Cyclic Voltammetry and the EC ₂ Reaction	255
7.6	Examples of EC and EC ₂ Processes	258
7.7	ECE Processes	266
7.8	ECE vs. DISP	274
7.9	The CE Mechanism	277
7.10	The EC' (Catalytic) Mechanism	278
7.11	Adsorption	281
7.12	Voltammetric Studies of Droplets and Solid Particles	292
	References	297
8	Hydrodynamic Electrodes	299
8.1	Convection	299
8.2	Modifying Fick's Laws to Allow for Convection	301
8.3	The Rotating Disc Electrode: An Introduction	302
8.4	The Rotating Disc Electrode — Theory	303
8.5	Osborne Reynolds (1842–1912)	307
8.6	The Rotating Disc Electrode — Further Theory	307
8.7	Chronoamperometry at the Rotating Disc Electrode: An Illustration of the Value of Simulation	314
8.8	The Rotating Disc and Coupled Homogeneous Kinetics	317
8.9	The Channel Electrode: An Introduction	320
8.10	The Channel Electrode: The Levich Equation Derived	323
8.11	Channel Flow Cells and Coupled Homogeneous Kinetics	324
8.12	Chronoamperometry at the Channel Electrode	330
8.13	The Channel Electrode is not 'Uniformly Accessible'	332
8.14	Channel Microelectrodes	333
8.15	Channel Microband Electrode Arrays for Mechanistic Electrochemistry	335
8.16	The High Speed Channel Electrode	339

8.17	Hydrodynamic Electrodes Based on Impinging Jets	341
8.18	Sonovoltammetry	343
	References	353
9	Voltammetry for Electroanalysis	355
9.1	Potential Step Voltammetric Techniques	355
9.2	Differential Pulse Voltammetry	356
9.3	Square Wave Voltammetry	358
9.4	Stripping Voltammetry	362
9.5	Sono-electroanalysis	369
	References	376
10	Voltammetry in Weakly Supported Media: Migration and Other Effects	377
10.1	Potentials and Fields in Fully Supported Voltammetry	377
10.2	The Distribution of Ions Around a Charged Electrode	380
10.3	The Electrode–Solution Interface: Beyond the Gouy–Chapman Theory	385
10.4	Double Layer Effect on Electrode Kinetics: Frumkin Effects	389
10.5	A.N. Frumkin	391
10.6	Transport by Diffusion and by Migration	392
10.7	Measurement of Ion Mobilities	394
10.8	Liquid Junction Potentials	396
10.9	Chronoamperometry and Cyclic Voltammetry in Weakly Supported Media	399
	References	405
11	Voltammetry at the Nanoscale	407
11.1	Transport to Particles Supported on an Electrode	407
11.2	Nanoparticle Voltammetry: The Transport Changes as the Electrode Shrinks in Size	415
11.3	Altered Chemistry at the Nanoscale	424
11.4	The Electrochemical Study of Nanoparticles in Solution: “Nano-impacts”	426
	References	428
	Appendix: Simulation of Electrode Processes	431
A.1	Fick’s First and Second Laws	431
A.2	Boundary Conditions	432
A.3	Finite Difference Equations	432

A.4	Backward Implicit Method	433
A.5	Conclusion	435
	References	435
