

TABLE OF CONTENTS

Preface	vii
Sources of Tensor Calculus	ix
Introduction	xv
Chapter 1. TENSOR ALGEBRA	1
1.1. Local Basis Vectors. Jacobian and Metric Matrices	1
1.2. Vector Product	12
1.3. Geometric Definition of a Tensor and Algebraic Operations on Tensors	17
1.4. Algebra of Tensor Fields	34
1.5. Eigenvalues of a Tensor	40
1.6. Symmetric, Skew-Symmetric and Orthogonal Tensors	43
1.7. Physical Components of Tensors	50
1.8. Tensors of Higher Orders	53
1.9. Pseudotensors	59
Chapter 2. TENSORS IN LINEAR SPACES	65
2.1. Linear n -Dimensional Space	65
2.2. Matrices of the n th Order	74
2.3. Linear Transformations of n -Dimensional Spaces	85
2.4. Dual Space	93
2.5. Algebra of Tensors in n -Dimensional Linear Spaces	98
2.6. Outer Forms	116
Chapter 3. GROUPS OF TRANSFORMATIONS	129
3.1. Linear Transformations of Coordinates	129
3.2. Transformation Groups in Three-Dimensional Euclidean Space	142
3.3. Symmetry of Finite Bodies	146
3.4. Matrix Representation of Transformation Groups	164
Chapter 4. INDIFFERENT TENSORS AND INVARIANTS	169
4.1. Indifferent Tensors	169
4.2. A Number of Independent Components for Indifferent Tensors	180
4.3. Symmetric Indifferent Tensors	192
4.4. Scalar Invariants	202
4.5. Invariants of Symmetric Second-Order Tensors	212
Chapter 5. TENSOR FUNCTIONS	227
5.1. Linear Tensor Functions	227
5.2. Scalar Functions of a Tensor Argument	253
5.3. Potential Tensor Functions	265
5.4. Quasilinear Tensor Functions	274
5.5. Spectral Resolutions of Second-Order Tensors	283
5.6. Spectral Resolutions of Quasilinear Tensor Functions	298
5.7. Nonpotential Tensor Functions	310
5.8. Differentiation of a Tensor Function with respect to a Tensor Argument	325

5.9. Scalar Functions of Several Tensor Arguments	328
5.10. Tensor Functions of Several Tensor Arguments	342
Chapter 6. TENSOR ANALYSIS	347
6.1. Covariant Differentiation	347
6.2. Differentiation of Second-Order Tensors	357
6.3. Properties of Covariant Derivatives	361
6.4. Covariant Derivatives of the Second Order	367
6.5. Differentiation in Orthogonal Curvilinear Coordinates	372
Chapter 7. GEOMETRY OF CURVES AND SURFACES	385
7.1. Curves in Three-Dimensional Euclidean Space	385
7.2. Surfaces in Three-Dimensional Euclidean Space	394
7.3. Curves on a Surface	413
7.4. Geometry in a Vicinity of a Surface	426
7.5. Planar Surfaces in $\mathbb{R}^3$	432
Chapter 8. TENSORS IN RIEMANNIAN SPACES AND AFFINELY CONNECTED SPACES	437
8.1. Riemannian Spaces	437
8.2. Affinely Connected Spaces	448
8.3. Riemannian Affinely Connected Spaces	456
8.4. The Riemann-Christoffel Tensor	462
Chapter 9. INTEGRATION OF TENSORS	475
9.1. Curvilinear Integrals of Tensors	475
9.2. Surface Integrals of Tensors	483
9.3. Volume Integrals of Tensors	488
Chapter 10. TENSORS IN CONTINUUM MECHANICS	493
10.1. Deformation Theory	493
10.2. Velocity Characteristics of Continuum Motion	508
10.3. Co-rotational Derivatives	516
10.4. Mass, Momentum and Angular Momentum Balance Laws	524
10.5. Thermodynamic Laws	538
10.6. The Deformation Compatibility Equation	546
10.7. The Complete System of Continuum Mechanics Laws	553
Chapter 11. TENSOR FUNCTIONS IN CONTINUUM MECHANICS	555
11.1. Energetic and Quasienergetic Couples of Tensors	555
11.2. General Principles for Tensor Functions in Continuum Mechanics	572
11.3. The Material Indifference Principle	582
11.4. The Material Symmetry Principle	600
11.5. Tensor Functions for Nonlinear Elastic Continua	618
11.6. Tensor Functions for Nonlinear Hypoelastic Continua	646
References	653
Subject Index	655
