

Contents

An Introduction to the Organic Chemistry of Isotopic Labelling	xiii
Chapter 1 The Discovery and Detection of Isotopes	1
1.1 Introduction	1
1.2 The Discovery of Isotopes	2
1.3 Early Applications of Isotopically Labelled Compounds	5
1.4 The Selection of an Isotopic Label	9
1.5 The Detection of Isotopes	13
1.6 Nomenclature	18
Chapter 2 Labelling Compounds with Carbon-13 and Carbon-14	20
2.1 Introduction	20
2.2 Carbon Labelling Using the Cyanide Ion	21
2.3 Organometallic Reagents in Carbon Labelling	24
2.4 The Wittig Reaction in Carbon Labelling	27
2.5 Carbonyl Condensation Reactions in Carbon Labelling	28
2.6 The Synthesis of Carbon-labelled Mevalonic Acid	31
2.7 Aromatic Compounds Labelled in the Ring	33
2.8 Ring-labelled Heterocyclic Compounds	35
2.9 Biosynthetic Methods of Carbon Labelling	38
Chapter 3 Labelling with Deuterium and Tritium	40
3.1 Introduction	40
3.2 The Kinetic Isotope Effect	41
3.3 The Isolation of Deuterium and Tritium	42

The Organic Chemistry of Isotopic Labelling

3.4	Exchange Reactions in Deuterium and Tritium Labelling	43
3.4.1	Heteroatom X–H Exchange Reactions	44
3.4.2	General C–H Exchange Reactions	44
3.4.3	Site-specific C–H Exchange Reactions	45
3.4.4	Exchange Reactions of Carbonyl Compounds	49
3.4.5	Exchange Reactions in the Preparation of Some Deuteriated Solvents	51
3.5	Decarboxylation Reactions in Deuterium and Tritium Labelling	51
3.6	Reduction Reactions	52
3.6.1	Reducing Agents	52
3.6.2	The Reduction of Carbonyl Groups	54
3.6.3	The Hydrogenolysis of Aliphatic Substituents	54
3.6.4	The Catalytic Reduction of Alkenes and Alkynes	54
3.6.5	The Hydrogenolysis of Aryl Halides	56
3.6.6	The Reduction of Iminium Salts	58
3.6.7	The Hydrogenolysis of Organometallic Compounds	58
3.6.8	Hydroboration	59
3.7	Deuterium- and Tritium-labelled Alkyl Halides	60
Chapter 4	Stereochemical Aspects of Labelling with Hydrogen Isotopes	62
4.1	Introduction	62
4.2	The Application of the Cahn–Ingold–Prelog Sequence Rules to Labelled Compounds	63
4.3	The Stereochemistry of Reactions Used in Labelling	64
4.4	Labelled Steroids	69
4.5	Labelled Gibberellin Plant Hormones	73
4.6	The Chiral Methyl Group	75
4.7	Stereospecifically Labelled Mevalonic Acid	78
4.8	Stereospecifically Labelled Isopentenyl Diphosphate	81
4.9	Labelling of 1-Deoxy-D-xylulose	83
4.10	The Stereochemistry of Hydrogen Transfer from the Nicotinamide Coenzymes	84
Chapter 5	The Synthesis of Labelled Amino Acids	86
5.1	Introduction	86
5.2	The Synthesis of Racemic Labelled Amino Acids	87
5.3	Labelled Enantiopure Amino Acids	89

Chapter 6	The Labelling of Some Compounds of Pharmaceutical Interest	96
6.1	Introduction	96
6.2	Lidocaine	97
6.3	Non-steroidal Anti-inflammatory Agents	98
6.4	Amphetamines	101
6.5	Sulfonamides	102
6.6	Morphine and Its Relatives	103
6.7	Galanthamine	106
6.8	Tropane Alkaloids	107
6.9	Tryptamine Derivatives	108
Chapter 7	Labelling Compounds with the Stable Isotopes of Nitrogen and Oxygen	110
7.1	Nitrogen-15	110
7.2	Oxygen-17 and Oxygen-18	116
Chapter 8	Labelling with Isotopes of Phosphorus, Sulfur and the Halogens	122
8.1	Phosphorus-32	122
8.2	Sulfur-34 and Sulfur-35	124
8.3	Chlorine-36	126
8.4	Iodine Isotopes	126
Chapter 9	Labelling Organic Compounds for Diagnostic Imaging	129
9.1	Introduction	129
9.2	Positron Emission Tomography	129
9.3	Carbon-11 in PET	131
9.4	Fluorine-18 in PET	135
9.5	Nitrogen-13 in PET	141
9.6	Oxygen-15 in PET	141
9.7	Isotopes of Bromine	141
9.8	Positron-emitting Metallic Isotopes in PET	142
9.9	Single Photon Emission Computed Tomography	143
9.10	Technetium-99m	143
9.11	Iodine-123	144
Conclusion		146
