Preface	9
List of symbols	11
1 Introduction	15
1.1 Subject matter and problems of structural dynamics	16
1.2 Coordinate systems	17
1.2.1 Cartesian coordinates	17
1.2.2 Generalized coordinates	19
1.2.3 Normal coordinates	20
1.3 Degrees of freedom	20
1.4 Flexibility and stiffness matrices	27
2 Basic relations of natural vibration	31
2.1 Systems with a single degree of freedom	31
2.1.1 Undamped natural vibration	31
2.1.2 Damped natural vibration	34
2.1.3 Torsional vibration	37
2.2 Systems with a finite number of degrees of freedom	37
2.2.1 Method of stiffness constants	38
2.2.1.1 Systems with two degrees of freedom	42
2.2.1.2 Systems with three degrees of freedom	44
2.2.2 Method of flexibility constants	49
2.2.2.1 Systems with two degrees of freedom	51
2.2.2.2 Systems with three degrees of freedom	52
2.2.3 Damped vibration of systems with a finite number of degrees of freedom	53
2.3 Systems with continuously distributed mass	56
2.3.1 Transverse vibration of a string	56
2.3.2 Transverse vibration of a bar	57
2.3.3 Longitudinal vibration of a bar	64
2.3.4 Torsional vibration of a bar	65
2.3.5 Transverse vibration of a bar subjected to an axial force	67
2.3.6 Transverse vibration of a bar with consideration only of shear	68
2.3.7 Transverse vibration with consideration of normal and shear deformations including the effect of rotary inertia	69

2.4	Other methods	71
2.4.1	Stodola's iteration method	71
2.4.2	Rayleigh's energy method	73
2.4.3	Variational methods	75
2.4.3.1	Ritz method	75
2.4.3.2	Galerkin's method	77
2.4.4	Method of initial parameters	78
2.4.5	Method of transfer matrices	81
2.4.5.1	Discrete systems	81
2.4.5.2	Systems with continuously distributed mass	83
2.4.6	Method of dynamic increments	84
2.4.7	Analysis by means of integral equations	86
2.5	Approximate formulae for the determination of the fundamental frequency	89
2.5.1	Baumann – Geiger's formula	89
2.5.2	Dunkerley's formula	90
3	Driving forces acting on engineering structures	91
3.1	Deterministic forces	94
3.1.1	Harmonic varying force	94
3.1.2	Periodic force	98
3.1.3	Non-periodic forces	101
3.1.3.1	Forces of limited duration	101
3.1.3.2	Forces of unlimited duration	107
3.2	Forces of random character	109
3.2.1	Probability	109
3.2.2	Random variable	110
3.2.2.1	Probability distribution function and probability density function	110
3.2.2.2	Expected value	113
3.2.2.3	Fundamental population and random sample	114
3.2.2.4	Moments of random variable	114
3.2.2.5	Theoretical probability distribution of random variables	118
3.2.2.6	Chebyshev's inequality	118
3.2.3	Two random variables	119
3.2.4	Random processes	122
3.2.4.1	Basic characteristics of a random process	124
3.2.4.2	Stationary random processes	126
3.2.4.3	Correlation function	127
3.2.4.4	Ergodicity of stationary random processes	130
3.2.4.5	Probability density function of a stationary ergodic random process	132
3.2.4.6	Power spectral density function	134
3.3	Determination of driving forces	139
3.3.1	Analytical determination of the driving forces	139
3.3.2	Experimental determination of the driving forces	141
3.3.2.1	Mechanical equipment as a system with a single degree of freedom	142
3.3.2.2	Mechanical equipment as a system with six degrees of freedom	148
4	Analysis of forced vibration	150
4.1	Vibration excited by a deterministic force	150
4.1.1	Forced vibration of an undamped system with a single degree of freedom	150

4.1.1.1	Harmonic varying force	150
4.1.1.2	Driving force of general periodic form	153
4.1.1.3	Driving force of completely general form	155
4.1.1.4	Vibration excited by an impulse of force	157
4.1.2	Forced vibration of a damped system with a single degree of freedom	161
4.1.2.1	Harmonic varying force	161
4.1.2.2	Driving force of general periodic form	164
4.1.2.3	Driving force of completely general form	164
4.1.2.4	Impulse of force	165
4.1.3	Forced vibration of systems with a finite number of degrees of freedom	165
4.1.3.1	A system of harmonic forces, direct solution	166
4.1.3.2	Solution using modal analysis	168
4.1.3.3	System of harmonic forces with different phases of action	170
4.1.3.4	Driving forces of periodic form	170
4.1.3.5	Driving forces of general form	171
4.1.4	Frequency response function of a linear system	173
4.1.5	Forced vibration of systems with continuously distributed mass	181
4.1.6	The stiffness method	182
4.1.6.1	Forced vibration	182
4.1.6.2	Natural vibration	184
4.1.7	The finite element method	184
4.2	Vibration of random character	188
4.2.1	A system with a single degree of freedom loaded by random excitation	190
4.2.2	A system with a finite number of degrees of freedom loaded by random excitation	197
4.2.2.1	Solution in normal coordinates	197
4.2.2.2	Solution by modal analysis	200
4.2.2.3	Direct solution	202
4.2.3	Systems with continuously distributed mass	203
4.2.3.1	Solution by modal analysis	204
4.2.3.2	Direct solution	205
5	Analysis of the vibration of buildings	207
5.1	Equivalent calculation scheme for buildings	209
5.2	Natural vibration of buildings	211
5.2.1	Systems with a single degree of freedom	211
5.2.2	Plane systems with rigid cross-beams	211
5.2.3	Three-dimensional structure composed of perfectly rigid plates interconnected by elastic columns	221
5.2.4	Plane frame structures	227
5.2.5	Three-dimensional frameworks	246
5.2.6	A perfectly rigid body resting on elastic foundation	259
5.2.7	Thin-walled space structures	261
5.2.8	An elastic cantilever beam fixed to a rigid base	262
5.2.8.1	Natural transverse vibration with consideration of bending only	262
5.2.8.2	Natural transverse vibration with consideration of normal and shear deformations	264
5.2.9	Empirical formulae for the determination of the fundamental frequency of natural vibration of buildings	265
5.3	Forced vibration excited by a deterministic load	266

Contents

5.3.1 Systems with a single degree of freedom	266
5.3.2 Plane system with rigid cross-beams	267
5.3.3 Three-dimensional structure composed of perfectly rigid plates interconnected by elastic columns	269
5.3.4 Plane and three-dimensional framed structures	271
5.4 Statistical methods in the analysis of the vibration of buildings	272
5.5 Vibration of the structural parts of a building	276
