

1. Introduction	11
2. Biology of the genus <i>Paramecium</i>	15
2.1. Taxonomy	15
2.1.1. History and classification	15
2.1.2. <i>Paramecium caudatum</i> — morphology and structure	17
2.2. Biological characteristics of <i>Paramecium caudatum</i>	18
2.2.1. General environmental conditions	18
2.2.2. Nutrition	19
2.2.3. Movement	20
2.2.4. Reproduction	21
2.2.5. Sexual process	22
2.2.6. Cell cycle	26
2.2.7. Life cycle	27
3. General morphology, ultrastructure and morphogenesis of cellular structures in <i>Paramecium caudatum</i>	29
3.1. Methods	29
3.1.1. Culture techniques	29
3.1.2. Light microscopy	29
3.1.3. Staining techniques	30
3.1.4. Oriented embedding in paraffin wax	30
3.1.5. Electron microscopy	31
3.1.5.1. Transmission electron microscopy	31
3.1.5.1.1. Ultrathin sectioning	31
3.1.5.1.2. Freeze-etching	31
3.1.5.2. Scanning electron microscopy	31
3.2. General morphology of <i>Paramecium caudatum</i>	31
3.2.1. Microscopic structure of the cell and the surface	31
3.2.2. Ultrastructure of the cortex	38
3.2.2.1. Membranous structures	39
3.2.2.2. Microtubular system	42
3.2.2.3. Microfilamentar system	45
3.2.3. Intracellular structures	47

3.2.3.1.	Nuclear system	47
3.2.3.2.	Contractile vacuoles	50
3.2.3.3.	Food vacuoles	51
3.2.3.4.	Mitochondria	53
3.2.3.5.	Endoplasmic reticulum	54
3.2.3.6.	Golgi apparatus	54
3.2.3.7.	Glycogen granules	54
3.3.	Ultrastructure of <i>Paramecium</i> membranes: local variations and differentiation	54
3.3.1.	Freeze-etched views of the membrane ultrastructure in <i>Paramecium</i>	56
3.3.1.1.	Membranes of the cel' surface and alveoli	56
3.3.1.2.	Membranes of intracellular structures	58
3.3.2.	Cortical membranes — local differences in the ultrastructure	59
3.3.2.1.	Rosettes	60
3.3.2.2.	Particle rings	62
3.3.2.3.	Annuli of particles around trichocyst tips	64
3.3.2.4.	Double rows of particles between alveoli	65
3.3.2.5.	Necklace of particles at the cilium base	65
3.3.2.6.	Regular particle patches at the cilium base	66
3.3.2.7.	Particle arrays in the cytopharynx membrane	67
3.3.2.8.	Bands of particles in the cytoproct	67
3.3.2.9.	Rows of particles around the circumference of the contractile vacuole pore	68
3.3.2.10.	Plates of intramembranous particles	69
3.3.3.	Function of local design in cortical membranes	69
3.3.3.1.	The role of IMP arrays in exocytosis and endocytosis	70
3.3.3.2.	The involvement of IMP arrays in the ciliary beat	70
3.3.3.3.	The role of IMP arrangements in communication between the cell and the environment	71
4.	Reparative regeneration of <i>Paramecium caudatum</i>	73
4.1.	Physiological and reparative regeneration of <i>Infusoria</i>	73
4.1.1.	Physiological regeneration	73
4.1.2.	Reparative regeneration	74
4.2.	Methods used in <i>Paramecium caudatum</i>	75
4.2.1.	Merotomy	75
4.2.2.	Methods to study of the biogenesis of the plasma membrane	76
4.2.3.	Cytophotometric detection of RNA distribution during protozoa regeneration	76
4.2.4.	Autoradiographic determination of RNA synthesis and proteosynthesis distribution in the course of paramecia regeneration	77
4.2.5.	Metabolic inhibitors	77
4.3.	Changes in surface structures during <i>Paramecium caudatum</i> regeneration	78
4.3.1.	Primary reaction of the <i>Paramecium caudatum</i> cell to merotomy	80
4.3.2.	Healing of the defect	84
4.3.3.	Substitution of lost parts of the cortex	90
4.3.3.1.	Repair of oral apparatus	90
4.3.3.2.	Repair of kinetosomal units and kineties	91
4.3.3.3.	Repair of the preoral suture and cytoproct	92
4.3.3.4.	Control of regeneration of cortical structures	93
4.3.4.	Metabolic changes during regeneration	94

4.3.4.1.	Changes in the RNA distribution during regeneration of <i>Paramecium caudatum</i>	95
4.3.4.2.	RNA synthesis during regeneration	98
4.3.4.3.	Distribution and synthesis of proteins during regeneration	98
4.3.4.4.	The relation between biochemical and morphological changes	100
5.	Biogenesis of membrane structures during regeneration of <i>Paramecium caudatum</i>	103
5.1.	Historical review	103
5.2.	Model specimens and study methods of the formation of the microscopic structure of biomembranes	106
5.3.	Formation of a new plasma membrane in <i>Paramecium</i>	107
5.3.1.	Physical properties of the newly-formed plasma membrane in <i>Paramecium</i>	108
5.3.2.	Ultrastructure of the newly-formed plasma membrane in <i>Paramecium</i> fragments	112
5.3.3.	The mechanism of the formation of a new plasma membrane	118
5.3.4.	The biogenesis of membrane structure in <i>Paramecium</i>	121
6.	Biological importance of membrane biogenesis [General conclusions]	125
6.1.	The importance of membrane biogenesis and membrane structure morphogenesis in <i>Infusoria</i>	125
6.2.	Biomembranes and control of cellular processes	127
6.3.	Biogenesis of plasma membrane and differentiation	129
6.4.	Plasma membrane and its recognition function	130
6.4.1.	Antigen properties of membrane proteins	130
6.4.2.	Mating activity	131
6.5.	Prospective use of <i>Paramecium</i> in biomembrane research	132
7.	Summary	135
	Souhrn	139
	Резюме	143
8.	References	147
