<i>Preface to the Second Edition</i>	<i>page xv</i>
<i>Preface to the First Edition</i>	xvii
1 Events and Probability	1
1.1 Application: Verifying Polynomial Identities	1
1.2 Axioms of Probability	3
1.3 Application: Verifying Matrix Multiplication	8
1.4 Application: Naïve Bayesian Classifier	12
1.5 Application: A Randomized Min-Cut Algorithm	15
1.6 Exercises	17
2 Discrete Random Variables and Expectation	23
2.1 Random Variables and Expectation	23
2.1.1 Linearity of Expectations	25
2.1.2 Jensen's Inequality	26
2.2 The Bernoulli and Binomial Random Variables	27
2.3 Conditional Expectation	29
2.4 The Geometric Distribution	33
2.4.1 Example: Coupon Collector's Problem	35
2.5 Application: The Expected Run-Time of Quicksort	37
2.6 Exercises	40
3 Moments and Deviations	47
3.1 Markov's Inequality	47
3.2 Variance and Moments of a Random Variable	48
3.2.1 Example: Variance of a Binomial Random Variable	51

3.3	Chebyshev's Inequality	51	6.2	The Expectation Argument	138
3.3.1	Example: Coupon Collector's Problem	53	6.2.1	Application: Finding a Large Cut	139
3.4	Median and Mean	55	6.2.2	Application: Maximum Satisfiability	140
3.5	Application: A Randomized Algorithm for Computing the Median	57	6.3	Derandomization Using Conditional Expectations	142
3.5.1	The Algorithm	58	6.4	Sample and Modify	142
3.5.2	Analysis of the Algorithm	59	6.4.1	Application: Independent Sets	143
3.6	Exercises	62	6.4.2	Application: Graphs with Large Girth	143
4	Chernoff and Hoeffding Bounds	66	6.5	The Second Moment Method	144
4.1	Moment Generating Functions	66	6.5.1	Application: Threshold Behavior in Random Graphs	145
4.2	Deriving and Applying Chernoff Bounds	68	6.6	The Conditional Expectation Inequality	147
4.2.1	Chernoff Bounds for the Sum of Poisson Trials	68	6.7	The Lovász Local Lemma	150
4.2.2	Example: Coin Flips	72	6.7.1	Application: Edge-Disjoint Paths	151
4.2.3	Application: Estimating a Parameter	72	6.7.2	Application: Satisfiability	152
4.3	Better Bounds for Some Special Cases	73	6.8*	Explicit Constructions Using the Local Lemma	152
4.4	Application: Set Balancing	76	6.8.1	Application: A Satisfiability Algorithm	155
4.5	The Hoeffding Bound	77	6.9	Lovász Local Lemma: The General Case	158
4.6*	Application: Packet Routing in Sparse Networks	79	6.10*	The Algorithmic Lovász Local Lemma	162
4.6.1	Permutation Routing on the Hypercube	80	6.11	Exercises	168
4.6.2	Permutation Routing on the Butterfly	85	7	Markov Chains and Random Walks	168
4.7	Exercises	90	7.1	Markov Chains: Definitions and Representations	171
5	Balls, Bins, and Random Graphs	97	7.1.1	Application: A Randomized Algorithm for 2-Satisfiability	174
5.1	Example: The Birthday Paradox	97	7.1.2	Application: A Randomized Algorithm for 3-Satisfiability	178
5.2	Balls into Bins	99	7.2	Classification of States	181
5.2.1	The Balls-and-Bins Model	99	7.2.1	Example: The Gambler's Ruin	182
5.2.2	Application: Bucket Sort	101	7.3	Stationary Distributions	188
5.3	The Poisson Distribution	101	7.3.1	Example: A Simple Queue	189
5.3.1	Limit of the Binomial Distribution	105	7.4	Random Walks on Undirected Graphs	192
5.4	The Poisson Approximation	107	7.4.1	Application: An s - t Connectivity Algorithm	193
5.4.1*	Example: Coupon Collector's Problem, Revisited	111	7.5	Parrondo's Paradox	198
5.5	Application: Hashing	113	7.6	Exercises	205
5.5.1	Chain Hashing	113	8	Continuous Distributions and the Poisson Process	205
5.5.2	Hashing: Bit Strings	114	8.1	Continuous Random Variables	205
5.5.3	Bloom Filters	116	8.1.1	Probability Distributions in $\mathbb{R}$	208
5.5.4	Breaking Symmetry	118	8.1.2	Joint Distributions and Conditional Probability	210
5.6	Random Graphs	119	8.2	The Uniform Distribution	211
5.6.1	Random Graph Models	119	8.2.1	Additional Properties of the Uniform Distribution	213
5.6.2	Application: Hamiltonian Cycles in Random Graphs	121	8.3	The Exponential Distribution	214
5.7	Exercises	127	8.3.1	Additional Properties of the Exponential Distribution	216
5.8	An Exploratory Assignment	133	8.3.2*	Example: Balls and Bins with Feedback	218
6	The Probabilistic Method	135	8.4	The Poisson Process	221
6.1	The Basic Counting Argument	135	8.4.1	Interarrival Distribution	

8.4.2	Combining and Splitting Poisson Processes	222	12	Coupling of Markov Chains	317
8.4.3	Conditional Arrival Time Distribution	224	12.1	Variation Distance and Mixing Time	317
8.5	Continuous Time Markov Processes	226	12.2	Coupling	320
8.6	Example: Markovian Queues	229	12.2.1	Example: Shuffling Cards	321
8.6.1	$M/M/1$ Queue in Equilibrium	230	12.2.2	Example: Random Walks on the Hypercube	322
8.6.2	$M/M/1/K$ Queue in Equilibrium	233	12.2.3	Example: Independent Sets of Fixed Size	323
8.6.3	The Number of Customers in an $M/M/\infty$ Queue	233	12.3	Application: Variation Distance Is Nonincreasing	324
8.7	Exercises	236	12.4	Geometric Convergence	327
9	The Normal Distribution	242	12.5	Application: Approximately Sampling Proper Colorings	328
9.1	The Normal Distribution	242	12.6	Path Coupling	332
9.1.1	The Standard Normal Distribution	242	12.7	Exercises	336
9.1.2	The General Univariate Normal Distribution	243	13	Martingales	341
9.1.3	The Moment Generating Function	246	13.1	Martingales	341
9.2*	Limit of the Binomial Distribution	247	13.2	Stopping Times	343
9.3	The Central Limit Theorem	249	13.2.1	Example: A Ballot Theorem	345
9.4*	Multivariate Normal Distributions	252	13.3	Wald's Equation	346
9.4.1	Properties of the Multivariate Normal Distribution	255	13.4	Tail Inequalities for Martingales	349
9.5	Application: Generating Normally Distributed Random Values	256	13.5	Applications of the Azuma-Hoeffding Inequality	351
9.6	Maximum Likelihood Point Estimates	258	13.5.1	General Formalization	351
9.7	Application: EM Algorithm For a Mixture of Gaussians	261	13.5.2	Application: Pattern Matching	353
9.8	Exercises	265	13.5.3	Application: Balls and Bins	354
10	Entropy, Randomness, and Information	269	13.5.4	Application: Chromatic Number	355
10.1	The Entropy Function	269	13.6	Exercises	355
10.2	Entropy and Binomial Coefficients	272	14	Sample Complexity, VC Dimension, and Rademacher Complexity	361
10.3	Entropy: A Measure of Randomness	274	14.1	The Learning Setting	362
10.4	Compression	278	14.2	VC Dimension	363
10.5*	Coding: Shannon's Theorem	281	14.2.1	Additional Examples of VC Dimension	365
10.6	Exercises	290	14.2.2	Growth Function	366
11	The Monte Carlo Method	297	14.2.3	VC dimension component bounds	368
11.1	The Monte Carlo Method	297	14.2.4	ϵ -nets and ϵ -samples	369
11.2	Application: The DNF Counting Problem	300	14.3	The ϵ -net Theorem	370
11.2.1	The Naïve Approach	300	14.4	Application: PAC Learning	374
11.2.2	A Fully Polynomial Randomized Scheme for DNF Counting	302	14.5	The ϵ -sample Theorem	377
11.3	From Approximate Sampling to Approximate Counting	304	14.5.1	Application: Agnostic Learning	379
11.4	The Markov Chain Monte Carlo Method	308	14.5.2	Application: Data Mining	380
11.4.1	The Metropolis Algorithm	310	14.6	Rademacher Complexity	382
11.5	Exercises	312	14.6.1	Rademacher Complexity and Sample Error	385
11.6	An Exploratory Assignment on Minimum Spanning Trees	315			

14.6.2	Estimating the Rademacher Complexity	387
14.6.3	Application: Agnostic Learning of a Binary Classification	388
14.7	Exercises	389
15	Pairwise Independence and Universal Hash Functions	392
15.1	Pairwise Independence	392
15.1.1	Example: A Construction of Pairwise Independent Bits	393
15.1.2	Application: Derandomizing an Algorithm for Large Cuts	394
15.1.3	Example: Constructing Pairwise Independent Values Modulo a Prime	395
15.2	Chebyshev's Inequality for Pairwise Independent Variables	396
15.2.1	Application: Sampling Using Fewer Random Bits	397
15.3	Universal Families of Hash Functions	399
15.3.1	Example: A 2-Universal Family of Hash Functions	401
15.3.2	Example: A Strongly 2-Universal Family of Hash Functions	402
15.3.3	Application: Perfect Hashing	404
15.4	Application: Finding Heavy Hitters in Data Streams	407
15.5	Exercises	411
16	Power Laws and Related Distributions	415
16.1	Power Law Distributions: Basic Definitions and Properties	416
16.2	Power Laws in Language	418
16.2.1	Zipf's Law and Other Examples	418
16.2.2	Languages via Optimization	419
16.2.3	Monkeys Typing Randomly	419
16.3	Preferential Attachment	420
16.3.1	A Formal Version	422
16.4	Using the Power Law in Algorithm Analysis	425
16.5	Other Related Distributions	427
16.5.1	Lognormal Distributions	427
16.5.2	Power Law with Exponential Cutoff	428
16.6	Exercises	429
	Balanced Allocations and Cuckoo Hashing	433
17.1	The Power of Two Choices	433
17.1.1	The Upper Bound	433
17.2	Two Choices: The Lower Bound	438
17.3	Applications of the Power of Two Choices	441
17.3.1	Hashing	441
17.3.2	Dynamic Resource Allocation	442
17.4	Cuckoo Hashing	442
17.5	Extending Cuckoo Hashing	452
17.5.1	Cuckoo Hashing with Deletions	452

17.5.2	Handling Failures	453
17.5.3	More Choices and Bigger Bins	454
17.6	Exercises	456
