Preface XI

Foreword XIII

Abbreviations, Symbols, Units XV

Introduction 1

- 1 History 1
- 2 Critical Points 8
 - 2.1 Challenges of the Protein Samples 8
 - 2.1 Challenges of the Analysis Systems 11
- 3 Proteomics Strategies 12
 - 3.1 Proteome Mapping 12
 - 3.2 Differential Analysis 12
 - 3.3 Time Point Experiments 13
 - 3.4 Verification of Targets or Biomarkers 13
 - 3.5 Integration of Results into Biological Context 13
 - 3.6 Systems Biology 13
- 4 Concept of Experimental Planning 14
 - 4.1 Biological Replicates 14
 - 4.2 Pooling of Samples: Yes or No? 14
 - 4.3 Pre-fractionation of Samples: Yes or No? 14
 - 4.4 Which is the Best Workflow to Start With? 15

Part I: Proteomics Technology

- 1 Electrophoretic Techniques 19
 - 1.1 The Principle of Electrophoresis and Some Methodological Background 19
 - 1.1.1 Free Flow Electrophoretic Methods 20
 - 1.1.2 Gels for Electrophoretic Techniques 21
 - 1.1.3 Electroendosmosis Effects 21
 - 1.2 Polyacrylamide Gel Electrophoresis 22

1.2.1	The Polyacrylamide Gel	22
1.2.2	SDS Polyacrylamide Gel Electrophoresis	27
1.2.3	Blue Native Electrophoresis	32
1.2.4	Cationic Detergent Electrophoresis	34
1.3	Blotting	35
1.3.1	Electrophoretic Transfer	36
1.3.2	Protein Detection on the Membrane	36
1.4	Isoelectric Focusing	38
1.4.1	Theoretical Background	39
1.4.2	Preparation of IEF Gels	44
1.4.3	Isoelectric Focusing in Proteomics	45
1.5	Two-dimensional Electrophoresis	53
1.5.1	Sample Preparation	53
1.5.2	Pre-labeling of Proteins for Difference Gel Electrophoresis	68
1.5.3	First Dimension: Isoelectric Focusing in IPG Strips	77
1.5.4	Second Dimension: SDS Electrophoresis	100
1.5.5	Detection of Protein Spots	119
1.6	Image Analysis	125
1.6.1	Image Acquisition	125
1.6.2	Image Analysis and Evaluation	129
1.6.3	Use of 2-D Electrophoresis Data	137
1.7	Spot Handling	137
1.7.1	Spot Picking	139
1.7.2	Protein Cleavage	141
2	Liquid Chromatography Techniques	151
2.1	Basic Principles of Important Liquid Chromatography Techniques	151
2.1.1	Ion Exchange Chromatography	153
2.1.2	Reversed Phase Chromatography	162
2.1.3	Affinity Chromatography	167
2.1.4	Gel Filtration	172
2.2	Strategic Approach and General Applicability	174
2.3	Liquid Chromatography Techniques and Applications in Proteome Analysis	176
2.3.1	Peptide Separation	176
2.3.2	2DLC Peptide Separation	179
2.3.3	Affinity Chromatography and LC-MS/MS	187
2.3.4	Protein Pre-fractionation	189
2.4	Practical Considerations and Application of LC-based Protein Pre-fractionation	194
2.4.1	Sample Extraction and Preparation	196
2.4.2	Experimental Setup	197
2.4.3	Ion Exchange Chromatography and Protein Pre-fractionation	198

2.4.4	Reversed Phase Chromatography and Protein Pre-fractionation	205
2.4.5	Fraction Size and Number of Fractions	210
2.5	Critical Review and Outlook	211
3	Mass Spectrometry	215
3.1	Ionization	218
3.1.1	Matrix Assisted Laser Desorption Ionization	218
3.1.2	Electrospray Ionization	222
3.2	Ion Separation	225
3.2.1	Time-of-Flight Analyzer	225
3.2.2	Triple Quadrupole Analyzer	227
3.2.3	Quadrupole Ion Trap	228
3.2.4	Quadrupole Time-of-Flight	230
3.2.5	Hybrid Triple Quadrupole Linear Ion Trap	231
3.2.6	TOF/TOF Analyzer	231
3.2.7	Fourier Transform Ion Cyclotron	232
3.2.8	Orbitrap	233
3.3	Generating MS Data for Protein Identification	233
3.3.1	Peptide Mass Fingerprint	234
3.3.2	Peptide Mass Fingerprint Combined With Composition Information	237
3.3.3	Peptide Mass Fingerprint Combined With Partial Sequence Information	238
3.3.4	Tandem Mass Spectrometry	242
3.4	Protein Characterization	258
3.4.1	Phosphorylation Analysis	259
3.4.2	Affinity Chromatography	260
3.4.3	Chemical Derivatization	261
3.4.4	Glycosylation	263
3.5	Protein Quantification Using Mass Spectrometry	264
3.5.1	Stable Isotope Labeling Approaches	264
3.5.2	Isotope-coded Affinity Tags	265
3.5.3	Stable Isotope Labeling with Amino Acids in Cell Culture	266
3.5.4	AQUA	267
3.5.5	iTRAQ	267
3.5.6	Non-labeling Software Approaches	268
3.6	MS Strategies	271
3.6.1	Bottom up Approach	271
3.6.2	Top down Approach	272
4	Functional Proteomics: Studies of Protein–Protein Interactions	273
4.1	Non-immunological Methods	273
4.1.1	Separation of Intact Multi-protein Complexes	273
4.1.2	Probing with Interaction Partners	273

4.1.3	Surface Plasmon Resonance	274
4.2	Antibody-based Techniques	275
4.2.1	Western Blotting and Dot Blots	275
4.2.2	Protein Microarrays	276
Part II:	Practical Manual of Proteome Analysis	279
	Equipment, Consumables, Reagents	281
	Step 1: Sample Preparation	287
	Step 2: Fluorescence Difference Gel Electrophoresis	299
	Step 3: Isoelectric Focusing	309
	Step 4: SDS Polyacrylamide Gel Electrophoresis	323
	Step 5: Scanning of Gels Containing Pre-labeled Proteins	357
	Step 6: Staining of Gels	361
	Step 7: Image Analysis and Evaluation of DIGE Gels	373
	Step 8: Spot Excision	383
	Step 9: Sample Destaining	387
	Step 10: Protein Digestion	389
	Step 11: Microscale Desalting and Concentrating of Sample	393
	Step 12: Chemical Derivatization of the Peptide Digest	397
	Step 13: MS Analysis	399
	Step 14: Calibration of MALDI-ToF MS	403
	Step 15: Preparing for a Database Search	407
Part III:	Trouble Shooting	411
1	Two-dimensional Electrophoresis	413
1.1	Sample Preparation	413
1.2	Isoelectric focusing in IGP strips	414
1.3	SDS PAGE	416
1.4	Staining	417
