

## List of Contents for Volume 1

Chapter 1	Introduction
Chapter 2	Concerning Certainty and Uncertainty
Chapter 3	Prevision and Probability
Chapter 4	Conditional Prevision and Probability
Chapter 5	The Evaluation of Probabilities
Chapter 6	Distributions
Index	

Bruno de Finetti gained his degree in Applied Mathematics at the University of Milan in 1927. In his research he has always viewed mathematics more as an instrument for application (in physics, biology, economics, statistics) and for the understanding of conceptual problems (logic, psychology, probability) rather than an abstract exercise in its own right. After 1938 he taught financial and actuarial mathematics at the Universities of Trieste and Rome and in 1961 he became Professor of the Theory of Probability at the University of Rome, where he has been ever since.

# Contents

## CHAPTER 7 A PRELIMINARY SURVEY 1

- 7.1 *Why a survey at this stage?* 1
- 7.2 *Heads and Tails: preliminary considerations* 3
- 7.3 *Heads and Tails: the random process* 13
- 7.4 *Some particular distributions* 22
- 7.5 *Laws of 'large numbers'* 33
- 7.6 *The 'central limit theorem'; the normal distribution* 44
- 7.7 *Proof of the central limit theorem* 64

## CHAPTER 8 RANDOM PROCESSES WITH INDEPENDENT INCREMENTS 71

- 8.1 *Introduction* 71
- 8.2 *The general case; the case of asymptotic normality* 78
- 8.3 *The Wiener-Lévy process* 92
- 8.4 *Stable distributions and other important examples* 98
- 8.5 *Behaviour and asymptotic behaviour* 107
- 8.6 *Ruin problems; the probability of ruin; the prevision of the duration of the game* 110
- 8.7 *Ballot problems; returns to equilibrium; strings* 123
- 8.8 *The clarification of some so-called paradoxes* 141
- 8.9 *Properties of the Wiener-Lévy process* 153

## CHAPTER 9 AN INTRODUCTION TO OTHER TYPES OF STOCHASTIC PROCESS 165

- 9.1 *Markov processes* 165
- 9.2 *Stationary processes* 168

## CHAPTER 10 PROBLEMS IN HIGHER DIMENSIONS 173

- 10.1 *Introduction* 173
- 10.2 *Second-order characteristics and the normal distribution* 176
- 10.3 *Some particular distributions: the discrete case* 180

- 10.4 *Some particular distributions: the continuous case* 185
- 10.5 *The case of spherical symmetry* 190

## CHAPTER 11 INDUCTIVE REASONING; STATISTICAL INFERENCE 195

- 11.1 *Introduction* 195
- 11.2 *The basic formulation and preliminary clarifications* 202
- 11.3 *The case of independence and the case of dependence* 208
- 11.4 *Exchangeability* 215

## CHAPTER 12 MATHEMATICAL STATISTICS 225

- 12.1 *The scope and limits of the treatment* 225
- 12.2 *Some preliminary remarks* 226
- 12.3 *Examples involving the normal distribution* 234
- 12.4 *The likelihood principle and sufficient statistics* 240
- 12.5 *A Bayesian approach to 'estimation' and 'hypothesis testing'* 243
- 12.6 *Other approaches to 'estimation' and 'hypothesis testing'* 245
- 12.7 *The connections with decision theory* 251

## APPENDIX 256

- 1 *Concerning various aspects of the different approaches* 256
- 2 *Events (True, False, and . . .)* 264
- 3 *Events in an unrestricted field* 267
- 4 *Questions concerning 'possibility'* 276
- 5 *Verifiability and the time factor* 280
- 6 *Verifiability and the operational factor* 284
- 7 *Verifiability and the precision factor* 289
- 8 *Continuation: the higher (or infinite) dimensional case* 298
- 9 *Verifiability and 'indeterminism'* 302
- 10 *Verifiability and 'complementarity'* 309
- 11 *Some notions required for a study of the quantum theory case* 313
- 12 *The relationship with 'three-valued logic'* 321
- 13 *Verifiability and distorting factors* 325
- 14 *From 'possibility' to 'probability'* 333
- 15 *The first and second axioms* 335
- 16 *The third axiom* 338
- 17 *Connections with aspects of the interpretations* 340
- 18 *Questions concerning the mathematical aspects* 343
- 19 *Questions concerning qualitative formulations* 361
- 20 *Conclusions (?)* 371
