	Multilevel and longitudinal models: When and why?	1
I	Preliminaries	9
1	Review of linear regression	11
1.1	Introduction	11
1.2	Is there gender discrimination in faculty salaries?	11
1.3	Independent-samples t test	12
1.4	One-way analysis of variance	17
1.5	Simple linear regression	19
1.6	Dummy variables	27
1.7	Multiple linear regression	30
1.8	Interactions	36
1.9	Dummy variables for more than two groups	42
1.10	Other types of interactions	48
1.10.1	Interaction between dummy variables	48
1.10.2	Interaction between continuous covariates	50
1.11	Nonlinear effects	52
1.12	Residual diagnostics	54
1.13	❖ Causal and noncausal interpretations of regression coefficients . .	56
1.13.1	Regression as conditional expectation	56
1.13.2	Regression as structural model	57

1.14	Summary and further reading	59
1.15	Exercises	60
II	Two-level models	71
2	Variance-components models	73
2.1	Introduction	73
2.2	How reliable are peak-expiratory-flow measurements?	74
2.3	Inspecting within-subject dependence	75
2.4	The variance-components model	77
2.4.1	Model specification	77
2.4.2	Path diagram	78
2.4.3	Between-subject heterogeneity	79
2.4.4	Within-subject dependence	80
	Intraclass correlation	80
	Intraclass correlation versus Pearson correlation	81
2.5	Estimation using Stata	82
2.5.1	Data preparation: Reshaping to long form	83
2.5.2	Using xtreg	84
2.5.3	Using xtmixed	85
2.6	Hypothesis tests and confidence intervals	87
2.6.1	Hypothesis test and confidence interval for the population mean	87
2.6.2	Hypothesis test and confidence interval for the between-cluster variance	88
	Likelihood-ratio test	88
	❖ Score test	89
	F test	92
	Confidence intervals	92
2.7	Model as data-generating mechanism	93
2.8	Fixed versus random effects	95
2.9	Crossed versus nested effects	97

2.10	Parameter estimation	99
2.10.1	Model assumptions	99
	Mean structure and covariance structure	100
	Distributional assumptions	101
2.10.2	Different estimation methods	101
2.10.3	Inference for β	103
	Estimate and standard error: Balanced case	103
	Estimate: Unbalanced case	105
2.11	Assigning values to the random intercepts	106
2.11.1	Maximum “likelihood” estimation	106
	Implementation via OLS regression	107
	Implementation via the mean total residual	108
2.11.2	Empirical Bayes prediction	109
2.11.3	Empirical Bayes standard errors	113
	Comparative standard errors	113
	Diagnostic standard errors	114
2.12	Summary and further reading	115
2.13	Exercises	116
3	Random-intercept models with covariates	123
3.1	Introduction	123
3.2	Does smoking during pregnancy affect birthweight?	123
3.2.1	Data structure and descriptive statistics	125
3.3	The linear random-intercept model with covariates	127
3.3.1	Model specification	127
3.3.2	Model assumptions	128
3.3.3	Mean structure	130
3.3.4	Residual variance and intraclass correlation	130
3.3.5	Graphical illustration of random-intercept model	131
3.4	Estimation using Stata	131
3.4.1	Using xtreg	132

3.4.2	Using xtmixed	133
3.5	Coefficients of determination or variance explained	134
3.6	Hypothesis tests and confidence intervals	138
3.6.1	Hypothesis tests for regression coefficients	138
	Hypothesis tests for individual regression coefficients . . .	138
	Joint hypothesis tests for several regression coefficients . .	139
3.6.2	Predicted means and confidence intervals	140
3.6.3	Hypothesis test for random-intercept variance	142
3.7	Between and within effects of level-1 covariates	142
3.7.1	Between-mother effects	143
3.7.2	Within-mother effects	145
3.7.3	Relations among estimators	147
3.7.4	Level-2 endogeneity and cluster-level confounding	149
3.7.5	Allowing for different within and between effects	152
3.7.6	Hausman endogeneity test	157
3.8	Fixed versus random effects revisited	158
3.9	Assigning values to random effects: Residual diagnostics	160
3.10	More on statistical inference	164
3.10.1	❖ Overview of estimation methods	164
3.10.2	Consequences of using standard regression modeling for clustered data	167
3.10.3	❖ Power and sample-size determination	168
3.11	Summary and further reading	171
3.12	Exercises	172
4	Random-coefficient models	181
4.1	Introduction	181
4.2	How effective are different schools?	181
4.3	Separate linear regressions for each school	182
4.4	Specification and interpretation of a random-coefficient model . . .	188
4.4.1	Specification of a random-coefficient model	188

4.4.2	Interpretation of the random-effects variances and co-variances	191
4.5	Estimation using xtmixed	194
4.5.1	Random-intercept model	194
4.5.2	Random-coefficient model	196
4.6	Testing the slope variance	197
4.7	Interpretation of estimates	198
4.8	Assigning values to the random intercepts and slopes	200
4.8.1	Maximum “likelihood” estimation	200
4.8.2	Empirical Bayes prediction	201
4.8.3	Model visualization	203
4.8.4	Residual diagnostics	204
4.8.5	Inferences for individual schools	207
4.9	Two-stage model formulation	210
4.10	Some warnings about random-coefficient models	213
4.10.1	Meaningful specification	213
4.10.2	Many random coefficients	213
4.10.3	Convergence problems	214
4.10.4	Lack of identification	214
4.11	Summary and further reading	215
4.12	Exercises	216
III	Models for longitudinal and panel data	225
	Introduction to models for longitudinal and panel data (part III)	227
5	Subject-specific effects and dynamic models	247
5.1	Introduction	247
5.2	Conventional random-intercept model	248
5.3	Random-intercept models accommodating endogenous covariates . .	250
5.3.1	Consistent estimation of effects of endogenous time-varying covariates	250

5.3.2	Consistent estimation of effects of endogenous time-varying and endogenous time-constant covariates . . .	253
5.4	Fixed-intercept model	257
5.4.1	Using xtreg or regress with a differencing operator	259
5.4.2	❖ Using anova	262
5.5	Random-coefficient model	265
5.6	Fixed-coefficient model	267
5.7	Lagged-response or dynamic models	269
5.7.1	Conventional lagged-response model	269
5.7.2	❖ Lagged-response model with subject-specific intercepts .	273
5.8	Missing data and dropout	278
5.8.1	❖ Maximum likelihood estimation under MAR: A simulation	279
5.9	Summary and further reading	282
5.10	Exercises	283
6	Marginal models	293
6.1	Introduction	293
6.2	Mean structure	293
6.3	Covariance structures	294
6.3.1	Unstructured covariance matrix	298
6.3.2	Random-intercept or compound symmetric/exchangeable structure	303
6.3.3	Random-coefficient structure	305
6.3.4	Autoregressive and exponential structures	308
6.3.5	Moving-average residual structure	311
6.3.6	Banded and Toeplitz structures	313
6.4	Hybrid and complex marginal models	316
6.4.1	Random effects and correlated level-1 residuals	316
6.4.2	Heteroskedastic level-1 residuals over occasions	317
6.4.3	Heteroskedastic level-1 residuals over groups	318
6.4.4	Different covariance matrices over groups	321

6.5	Comparing the fit of marginal models	322
6.6	Generalized estimating equations (GEE)	325
6.7	Marginal modeling with few units and many occasions	327
6.7.1	Is a highly organized labor market beneficial for economic growth?	328
6.7.2	Marginal modeling for long panels	329
6.7.3	Fitting marginal models for long panels in Stata	329
6.8	Summary and further reading	332
6.9	Exercises	333
7	Growth-curve models	343
7.1	Introduction	343
7.2	How do children grow?	343
7.2.1	Observed growth trajectories	344
7.3	Models for nonlinear growth	345
7.3.1	Polynomial models	345
	Fitting the models	346
	Predicting the mean trajectory	349
	Predicting trajectories for individual children	351
7.3.2	Piecewise linear models	353
	Fitting the models	354
	Predicting the mean trajectory	357
7.4	Two-stage model formulation	358
7.5	Heteroskedasticity	360
7.5.1	Heteroskedasticity at level 1	360
7.5.2	Heteroskedasticity at level 2	362
7.6	How does reading improve from kindergarten through third grade?	364
7.7	Growth-curve model as a structural equation model	364
7.7.1	Estimation using sem	366
7.7.2	Estimation using xtmixed	371
7.8	Summary and further reading	375

7.9	Exercises	376
IV	Models with nested and crossed random effects	383
8	Higher-level models with nested random effects	385
8.1	Introduction	385
8.2	Do peak-expiratory-flow measurements vary between methods within subjects?	386
8.3	Inspecting sources of variability	388
8.4	Three-level variance-components models	389
8.5	Different types of intraclass correlation	392
8.6	Estimation using xtmixed	393
8.7	Empirical Bayes prediction	394
8.8	Testing variance components	395
8.9	Crossed versus nested random effects revisited	397
8.10	Does nutrition affect cognitive development of Kenyan children? . .	399
8.11	Describing and plotting three-level data	400
8.11.1	Data structure and missing data	400
8.11.2	Level-1 variables	401
8.11.3	Level-2 variables	402
8.11.4	Level-3 variables	403
8.11.5	Plotting growth trajectories	404
8.12	Three-level random-intercept model	405
8.12.1	Model specification: Reduced form	405
8.12.2	Model specification: Three-stage formulation	405
8.12.3	Estimation using xtmixed	406
8.13	Three-level random-coefficient models	409
8.13.1	Random coefficient at the child level	409
8.13.2	Random coefficient at the child and school levels	411
8.14	Residual diagnostics and predictions	413
8.15	Summary and further reading	418
8.16	Exercises	419

9	Crossed random effects	433
9.1	Introduction	433
9.2	How does investment depend on expected profit and capital stock?	434
9.3	A two-way error-components model	435
9.3.1	Model specification	435
9.3.2	Residual variances, covariances, and intraclass correlations	436
	Longitudinal correlations	436
	Cross-sectional correlations	436
9.3.3	Estimation using xtmixed	437
9.3.4	Prediction	441
9.4	How much do primary and secondary schools affect attainment at age 16?	443
9.5	Data structure	444
9.6	Additive crossed random-effects model	446
9.6.1	Specification	446
9.6.2	Estimation using xtmixed	447
9.7	Crossed random-effects model with random interaction	448
9.7.1	Model specification	448
9.7.2	Intraclass correlations	448
9.7.3	Estimation using xtmixed	449
9.7.4	Testing variance components	451
9.7.5	Some diagnostics	453
9.8	❖ A trick requiring fewer random effects	456
9.9	Summary and further reading	459
9.10	Exercises	460
A	Useful Stata commands	471
	References	473
	Author index	485
	Subject index	491
