

Preface	v
1. Introduction to Foundational Physics	1
1.1 What do we mean by foundations of physics?	1
1.2 How do we study it?	2
1.3 Avoiding the arbitrary	5
1.4 Totality zero	7
1.5 What questions should we ask?	8
2. Mathematical Ideas and Methods	11
2.1 Quaternions and octonions	11
2.2 Clifford algebra	18
2.3 Groups	20
2.4 Nilpotents and idempotents	25
2.5 Standard and non-standard analysis	26
2.6 Topology	28
2.7 Key numbers in duality, anticommutativity and symmetry-breaking	29
2.8 Some significant group tables	29
3. The Most Primitive Concepts	31
3.1 What are the most primitive concepts in physics?	31
3.2 Measurement	34
3.3 Conservation and nonconservation	37
3.4 Real and imaginary	43
3.5 Commutative and anticommutative	48

4.	A Fundamental Symmetry	54
4.1	A key group	54
4.2	Visual representations	60
4.3	Two spaces?	64
4.4	A unified algebra	66
4.5	Nipotency	69
4.6	The symmetry-breaking between charges	71
4.7	The parameters in the dual group	71
4.8	Conservation of angular momentum and conservation of type of charge	73
5.	Nilpotent Quantum Mechanics I	75
5.1	The Dirac equation	75
5.2	The nilpotent Dirac equation	78
5.3	Using discrete differentiation	83
5.4	Idempotents and nilpotents	85
5.5	Pauli exclusion	86
5.6	Vacuum	87
5.7	Quantum mechanics and the quantum field	91
5.8	Spin and helicity	92
5.9	<i>Zitterbewegung</i> and Berry phase	95
5.10	CPT symmetry	97
6.	Nilpotent Quantum Mechanics II	99
6.1	Bosons	99
6.2	Baryons	102
6.3	Partitioning the vacuum	106
6.4	Local and nonlocal	111
6.5	The Coulomb (electric) interaction	114
6.6	The strong interaction	115
6.7	The weak interaction	117
7.	Nilpotent Quantum Field Theory	124
7.1	A perturbation calculation	124
7.2	Cancellation of loops	127
7.3	Propagators	131
7.4	A weak interaction calculation	134
7.5	BRST quantization	136

7.6	Mass generation	137
7.7	String theory	138
7.8	One-fermion theory	141
7.9	Dualities in nilpotent quantum theory	142
8.	Gravity	145
8.1	General relativity or quantum mechanics?	145
8.2	Gravity and quantum mechanics	146
8.3	General relativity and Newtonian theory	150
8.4	The effect of observation on nonlocal gravity	151
8.5	The aberration of space	154
8.6	Gravitomagnetic effects	156
8.7	Maxwell's equations for gravitomagnetism	158
8.8	Mach's principle	159
8.9	Can we quantize gravitational inertia?	163
8.10	Extended causality and quantized inertia	165
9.	Particles	168
9.1	Particle structures from nilpotent quantum mechanics	168
9.2	Phase diagrams	172
9.3	Dirac equation for charge	174
9.4	Fermionic states from the algebra	176
9.5	Equation for specifying particle states	177
9.6	Tables of particle structures	180
9.7	$SU(5)$	182
9.8	Quarks	184
9.9	Grand Unification: a prediction	186
9.10	The Higgs mechanism and fermion masses	191
9.11	Larger group structures for fermions and bosons	191
10.	Return to Symmetries	197
10.1	A universal rewrite system	197
10.2	Mathematical representation	203
10.3	Physical application	206
10.4	Entropy and information	207
10.5	Duality and the factor 2	210

10.6 Anticommutativity and the factor 3	220
10.7 Symmetry and self-organization	222
