

Content

Chapter 1	13
Ecological aspects of agglomerate production using biomass	
<i>Jaroslav Legemza, Mária Fröhlichová, Róbert Findorák, Martina Džupková and Zuzana Semanová</i>	
Introduction	13
1.1 Theoretical part	14
1.1.1 Agglomeration process and ecology	14
1.1.2 Use alternative carbonaceous fuels in the production of agglomerates	18
1.2 Materials and methodology of experimental works	24
1.3 Results and discussion	25
1.4 Conclusion	33
References	34
Chapter 2	36
Frames of steel production in Polish steel market – analysis of the problem on the base of forecasts of steel production	
<i>Bożena Gajdzik, Bożena Szczucka-Lasota, Tomasz Węgrzyn and Michał Krzysztoforski</i>	
Introduction	36
2.1 Situation in the steel industry in Poland in 2000-2016	36
2.2 Predictive analysis and scenario matrix for particular trends for steel production in Poland	38
2.2.1 Forecasts of steel production in Poland until 2020	39
2.2.2 Scenarios of steel production in Poland until 2020	41
2.3 IDI – Qualitative research scenario	42
2.4 Conclusion	44
References	45
Chapter 3	46
Optimization of production scheduling of melt sequences	
<i>Jiří David, Robert Frischer, Pavel Švec, Tomáš Plaček and Tomáš Barčák</i>	
Introduction	46
3.1 Production scheduling of production	47
3.1.1 Control of processes	47
3.1.2 Scheduling of melt sequences	48
3.2 Model of Production Scheduling	49
3.2.1 Model with artificial intelligence	49
3.2.2 Regression model using analytical diagnostics	52
3.2.3 Planning expert system	53
3.3 Conclusion	56
References	57

Chapter 4	58
Determination of thermodynamic properties of alloys based on Fe-C-Cr with use of thermal analysis methods and theoretical calculations	
<i>Lubomíra Drozdová, Bedřich Smetana and Mario Machů</i>	
Introduction	58
4.1 Fe-based systems	59
4.1.1 Binary system Fe-C	59
4.1.2 Ternary system Fe-C-Cr	60
4.2 Theoretical and empirical equations	61
4.3 Calculations using software	62
4.3.1 SW Thermo-Calc	63
4.3.2 SW Interdendritic Solidification (IDS)	63
4.4 Thermal analysis methods	64
4.4.1 Direct thermal analysis (Direct TA)	64
4.4.2 Differential thermal analysis (DTA)	64
4.4.3 Differential scanning calorimetry (DSC)	65
4.4.4 „Continuous“ method	65
4.4.5 „Stepwise“ method	66
4.4.6 „Drop“ method	67
4.5 Microscopy	67
4.6 Experimental	67
4.6.1 Experimental material	67
4.6.2 Experimental devices	68
4.6.3 Theoretical calculations	70
4.6.4 Results and discussion	70
4.6.5 Phase transition temperatures	71
4.6.6 Heat capacities	73
4.7 Conclusion	76
References	76
 Chapter 5	 79
Modelling of continuous casting processes	
<i>Branislav Bulko, Peter Demeter, Dana Baricová and Ivana Atyafiová</i>	
Introduction	79
5.1 Justification of the currentness and need for solution of given issue	80
5.2 The nature of physical modelling of steel flow	82
5.3 Current physical models at the Institute of Metallurgy at the Faculty of Materials, Metallurgy and Recycling (FMMR)	82
5.3.1 The water model of tundish U. S. Steel Košice, s.r.o., at a 1:3 scale	82
5.3.2 The water model of the tundish in Železiarne Podbrezová, a.s. at a scale of 1:2, the SimConT laboratory	84
5.3.3 The water model of double-stream tundish at a 2:5 scale developed in cooperation with IPC Refractories s.r.o.	85
5.4 Outputs from measurements on water models of CCM	86
5.5 Mathematical modelling of steel flow processes at UMET	88
5.6 The selection of the calculation model	91
5.6.1 Turbulence model	91
5.6.2 The scheme of optimisation procedure of tundish metallurgy	92

5.6.3	Analysis of the effect of the ladle shroud misalignment on the change of the flow conditions of steel in the tundish	93
5.6.4	Comparison of the "Spheric" impact pad with the reference impact pad	95
5.6.5	Tundish (Slovenia) - Comparison of different types of impact pads	96
5.7	Conclusion	97
	References	97

Chapter 6 **100**

Numerical modelling as a research tool for analysis of the liquid steel flow in CC tundish

Tomasz Merder, Jacek Pieprzyca and Mariola Saternus

	Introduction	100
6.1	The choice of mathematical model describing the analysed problem	101
6.2	Procedures implemented during numerical calculations	102
6.3	Exemplary results of CFD analysis of liquid steel flow in the tundish	107
6.4	Conclusion	108
	References	109

Chapter 7 **110**

Steel ingot production – Possibilities of its verification and optimization

Markéta Tkadlečková, Karel Michalek, Michaela Strouhalová, Jana Sviželová and Josef Walek

	Introduction	110
7.1	Structure and defects of steel ingot	110
7.2	Methods for analysing the process of production and prediction of ingot defects	112
7.3	Numerical modelling of casting and solidification of steel ingots	113
7.3.1	Commercial software systems	113
7.3.2	Procedure of numerical modelling	114
7.3.2.1	Geometry and computational Mesh	115
7.3.2.2	Thermo-physical properties of material	116
7.3.2.3	Interface - heat transfer	119
7.3.2.4	Simulation parameters – Run parameters	120
7.3.2.5	Types of results on numerical modelling	122
7.3.2.5.1	Porosity	123
7.3.2.5.2	Macro-segregation	123
7.3.2.5.3	Hot tearing and cracks	124
7.4	Conclusion	125
	References	128

Chapter 8 **131**

Mechanical properties and structure of steel welds in MMA and MAG with micro-jet cooling processes

Bożena Szczucka-Lasota, Tomasz Węgrzyn, Bożena Gajdzik and Michał Krzysztoforski

	Introduction	131
8.1	Experimental procedure	132
8.2	Conclusion	138
	References	139

Chapter 9	141
Influence of convection heat transfer on a dual frequency induction hardening of gear wheels	
<i>Albert Smalcerz, Jerzy Barglik and Bartosz Węcki</i>	
Introduction	141
9.1 Formulation of the mathematical model	143
9.2 Illustrative example	148
9.3 Parameters of process	149
9.4 Results	151
9.5 Conclusion	152
References	152
 Chapter 10	 154
The origin, development, processing and utilization of steelmaking slags	
<i>Dana Baricová, Alena Pribulová, Peter Demeter and Branislav Bul'ko</i>	
Introduction	154
10.1 Steelmaking slag	155
10.1.1 The formation of steel slags	156
10.1.2 Properties of steelmaking slag	158
10.1.3 Physical properties of steelmaking slags	160
10.2 Processing of steelmaking slags	162
10.2.1 Granulated steelmaking slags	164
10.3 Utilization of steelmaking slag	165
10.3.1 Utilization of steelmaking slag in construction	166
10.3.2 Utilization of steelmaking slag in agriculture	169
10.3.3 Utilization of steelmaking slags in the metallurgical cycle	170
10.4 Conclusion	173
References	174
 Chapter 11	 177
Recycling of selected waste in Poland in 2015	
<i>Edyta Kardas, Silvie Brožová, Pavlína Pustějovská and Simona Jursová</i>	
Introduction	177
11.1 Recycling of waste	178
11.2 Presentation of results	179
11.3 Conclusion	187
References	187
 Chapter 12	 188
Modification of Existing Industrial Processes – Innovated Technologies of Recycling of Metallic Wastes	
<i>Silvie Brožová, Pavlína Pustějovská, Jiří Bilík, Simona Jursová, Monika Zbranková, Petr Strakoš, Hana Salomonová and Jaroslav Havránek</i>	
Introduction	188
12.1 PRIMUS Technology - Paul Wurth	188
12.2 ISARNA – INTENSIVE MELTING DEOXIDATION	190
12.3 TROP PROCEDURE	191

12.4	Conclusion	192
	References	192

Chapter 13 **195**

Recycling of beverage aluminium cans and its ecological aspect

Manuela Ingaldi and Silvie Brožová

Introduction	195
13.1	Ecological aspect of aluminium recycling 196
13.2	Aluminium recycling 197
13.3	Aluminium beverage can - characteristics 199
13.4	Recycling of aluminium beverage can 201
13.5	Statistics about recycling of aluminium beverage can in Poland 202
13.6	Conclusion 203
References	204

Chapter 14 **206**

Possibilities of Recovery Metals from Waste Mobile Phones

Mariola Saturnus, Magdalena Lisińska and Joanna Willner

Introduction	206
14.1	Management of waste mobile phones 206
14.2	Material composition of electronic waste 208
14.3	Methods of mobile phone treatment to recover gold and copper 210
14.4	Conclusion 214
References	216

Chapter 15 **218**

Alternative energy sources used in Poland and Czech Republic

Anna Konstanciak

Introduction	218
15.1	Primary energy 220
15.2	Utilization of energy from renewable sources in Poland and Czech Republic 224
15.3	Conference "Good Energy" 226
15.4	Conclusion 227
References	228
