	Contributors	15
	List of figures and tables	17
	Introduction Dietetic Pocket Guide <i>adults</i>	23
1	Nutritional status	27
1.1	Measuring body weight and height	28
1.1.1	Weight	28
1.1.2	Height	28
1.2	Underweight, normal weight, overweight and obesity	36
1.3	Undernutrition (synonym: malnutrition)	37
1.4	Screening tools for undernutrition	38
1.5	Sarcopenia and frailty	42
2	Energy, protein and fluid requirements	43
2.1	Energy metabolism	43
2.1.1	The citric acid cycle	43
2.1.2	The physiology of fasting	45
2.1.3	Energy unit	47
2.1.4	Gross and net energy values: Atwater factors	48
2.2	Energy requirements	48
2.2.1	Measuring resting energy expenditure	48
2.2.2	Estimating resting energy expenditure	49
2.2.3	Calculating total energy expenditure	50
2.2.4	Which body weight should be used in the equation?	51

2.3	Protein requirements	51
2.3.1	Protein requirements in different age and patient groups	51
2.3.2	Protein requirements for underweight and overweight adults	52
2.3.3	Protein requirements with parenteral nutrition for adults	53
2.4.4	Fluid requirements	54
3	Macro- and micronutrients	55
3.1	Macronutrients	56
3.1.1	Proteins: amino acids	56
3.1.2	Fats: fatty acids	59
3.1.3	Carbohydrates	63
3.2	Micronutrients	65
3.2.1	Basic information on micronutrients	65
3.2.2	Conversion factors for vitamin units	80
3.2.3	Reference intakes of vitamins, minerals and trace elements	81
3.2.4	Maximum safe dose and toxic levels of vitamins, minerals, and trace elements	93
3.2.5	Body stores of vitamins, minerals, and trace elements	97
3.2.6	Conversion from mmol to mg	99
4	Gastrointestinal tract; digestion and absorption	103
4.1	Mouth and taste	103
4.2	Gastrointestinal tract	105
4.2.1	Anatomy	105
4.2.2	Transit time of the gastrointestinal tract	107

4.2.3	Digestion and secretion	109
4.2.4	Absorption	113
4.2.5	Composition of gastrointestinal excretions	115
4.3	Water balance	116
4.4	Influence of shortened bowel length (short bowel syndrome) on absorptive capacity	117
5	Classification of organ failure and diseases	119
5.1	Organ failure	119
5.1.1	Kidney failure	119
5.1.2	Heart failure	122
5.1.3	Chronic obstructive lung failure	123
5.1.4	Liver failure	124
5.1.5	Pancreatitis	125
5.1.6	Intestinal failure	127
5.1.7	Chronic idiopathic inflammatory bowel disease (IBD)	128
5.1.8	Celiac disease	130
5.2	Other disease-specific scores	131
5.3	Cancer	136
5.3.1	Classification of Malignant Tumors (TNM)	136
5.3.2	Classification of adverse effects of anti-tumor treatment	138
5.4	Intensive Care classifications	140
5.5	Inherited metabolic disorders	140
6	Laboratory values	143
6.1	General conversion factors	143
6.2	Clinical chemistry reference ranges	143

6.3	Protein in the blood	158
6.3.1	Acute-phase proteins	158
6.3.2	Half-lives	158
6.4	Anemia	159
6.5	HbA1c	161
6.6	Calcium phosphate balance	163
6.7	Blood gas values (Astrup)	163
6.8	Laboratory monitoring for (par)enteral nutrition (EN, PN)	166
6.9	Refeeding syndrome	167
6.9.1	Patients at risk of refeeding syndrome	168
6.9.2	Prevention, treatment and monitoring of refeeding syndrome	169
6.10	Osmolarity and osmolality	172
7	Losses from the body	173
7.1	Feces	173
7.1.1	Consistency	173
7.1.2	Composition	174
7.1.3	Constipation and diarrhea	175
7.1.4	Intestinal absorption capacity and malabsorption	178
7.1.5	Fecal diagnostic tests	178
7.2	Urine	184
7.2.1	Nitrogen balance (N-balance)	184
7.2.2	Sodium in urine	185
7.2.3	Ketones in urine	187
7.3	Composition of bodily fluids	187

8	Food-drug interactions, drug-food interactions and rehydration strategies	191
8.1	Food-drug interactions	191
8.2	Drug-food interactions	198
8.2.1	Ion exchangers (potassium)	198
8.2.2	Phosphate binders	199
8.2.3	Pancreatic enzyme supplements	202
8.2.4	Diabetes mellitus medication	204
8.3	Rehydration strategies	210
8.3.1	Oral Rehydration Solutions (ORS)	210
8.3.2	Infusion fluids	212
9	Body composition	213
9.1	Composition of the body	213
9.1.1	Body composition levels	214
9.1.2	Distribution of body fluids	214
9.1.3	Distribution of body surface area	215
9.2	Methods to measure body composition	215
9.2.1	Indirect methods	217
9.2.2	Double indirect methods	225
10	Assessment of other outcome measures for somatic, functional, psychological, and social status	241
10.1	Somatic status	241
10.1.1	Visual analogue scale (VAS)	241
10.1.2	Food intake	242
10.1.3	Questionnaires and measurement instruments for somatic status	242

10.2	Functional status	245
10.2.1	Gait speed	245
10.2.2	Hand grip strength	245
10.2.3	Questionnaires and instruments for assessing functional status	248
10.3	Psychological status	250
10.3.1	Questionnaires and measurement instruments for psychological status	250
10.4	Social status (quality of life)	252
10.4.1	Questionnaires and instruments for social status	252
10.5	Comprehensive assessment of health status	255
