

# CONTENTS

1.	Introduction . . . . .	7
1.1.	Nature of processes in layers of particles . . . . .	8
2.	Structural inhomogeneities of random fixed beds . . . . .	11
2.1.	Classification and characteristics of structural inhomogeneities of the bed . . . . .	11
2.2.	Mathematical models of structural inhomogeneity of the bed near confining surfaces . . . . .	18
2.2.1.	Bed confined by a plane . . . . .	18
2.2.2.	Bed confined by a cylindrical surface . . . . .	25
2.3.	Experimental determination of inhomogeneities in fixed beds . . . . .	33
2.4.	Area void fraction in a fixed bed confined by a plane . . . . .	35
2.5.	Area void fraction in a fixed bed confined by a cylindrical surface . . . . .	39
2.6.	Area void fraction in region of contact of beds of unequal particles . . . . .	40
	List of Symbols . . . . .	45
3.	Velocity and pressure field in an inhomogeneous fixed bed . . . . .	46
3.1.	Equations governing the velocity and pressure distribution in inhomogeneous beds . . . . .	46
3.1.1.	Velocity and pressure field of an incompressible fluid in an inhomogeneous bed . . . . .	53
3.1.2.	Energy dissipation in an incompressible fluid flowing through an inhomogeneous bed . . . . .	57
3.1.3.	Parallel flow and the minimum of energy dissipation flow distribution . . . . .	58
3.1.4.	Parallel flow with axial symmetry – experimental results . . . . .	62
3.2.	Velocity and pressure field under the flow of an ideal compressible gas in an inhomogeneous medium . . . . .	67
3.3.	Thermally induced gas flow inhomogeneities in a fixed bed . . . . .	69
3.4.	The relationship between the inhomogeneous structure of the bed and energy losses of the flowing fluid . . . . .	74
3.4.1.	The energy losses in inhomogeneous beds under parallel flow . . . . .	74
3.4.2.	Change of the flow direction from parallel flow . . . . .	76
3.4.3.	The flow in constrictions . . . . .	79
3.4.4.	The energy losses and flow maldistribution in beds with axial symmetry of structural inhomogeneity . . . . .	81
3.4.5.	Energy losses and flow maldistribution in beds with angular distribution of structural inhomogeneity . . . . .	92
3.4.6.	Potentials of structuralization of the bed for energy savings and associated flow maldistribution . . . . .	96
3.4.7.	The flow across the “interface” between layers of particles of different size . . . . .	103
3.4.8.	The flow through structuralized beds in the presence of “interfacial” resistances . . . . .	107
	List of Symbols . . . . .	114
4.	Velocity field under the trickling flow of liquid in a fixed bed . . . . .	116
4.1.	The percolation model concept of liquid flow in a packed bed . . . . .	117

4.2.	The diffusion model concept of liquid flow in a packed bed . . . . .	120
4.2.1.	The coefficient of radial spread of liquid . . . . .	122
4.2.2.	Numerical values of the coefficient of radial spread and correlations . . . . .	130
4.2.3.	The wall flow . . . . .	133
4.2.4.	The distribution of liquid under various initial distributions and under the effect of the wall flow . . . . .	136
4.2.5.	The determination and numerical values of the boundary condition parameters C and B . . . . .	141
4.3.	The potential flow model . . . . .	148
4.4.	The effect of flow maldistribution on mass transfer . . . . .	149
4.4.1.	The wall flow "wipers" and flow redistributors . . . . .	158
4.4.2.	A mathematical model of the effect of flow distribution on absorption of a poorly soluble gas . . . . .	161
4.5.	The effect of flow distribution on liquid hold-up . . . . .	163
4.6.	The liquid flow distribution in the blast furnace . . . . .	167
	List of Symbols . . . . .	170
5.	The effect of flow inhomogeneities on heat dispersion in fixed beds . . . . .	172
5.1.	The pseudohomogeneous model of heat dispersion in fixed beds passed by gas . . . . .	173
5.1.1.	Heat dispersion characteristics from nonuniform inlet temperature profiles . . . . .	174
5.1.2.	The length effect in heat dispersion measurements . . . . .	178
5.2.	The effect of structural inhomogeneities on heat dispersion in fixed beds . . . . .	181
5.2.1.	Low bed to particle diameter ratio effects . . . . .	182
5.2.2.	Structural effects at low and high fluid velocities . . . . .	183
5.2.3.	Wall structural effects – modelling . . . . .	184
5.2.4.	Wall structural effects in chemical reactors . . . . .	185
5.2.5.	Other types of structural inhomogeneity effects . . . . .	187
5.2.6.	Structural inhomogeneities and the length effect . . . . .	187
5.3.	The effect of thermally induced flow inhomogeneities on heat dispersion . . . . .	188
5.3.1.	The effect of thermally induced flow inhomogeneities on heat dispersion in fixed beds . . . . .	188
5.3.2.	The effect of thermally induced flow inhomogeneities on heat dispersion in fixed bed reactors . . . . .	194
5.3.3.	Combined effect of structurally and thermally induced flow inhomogeneities . . . . .	198
	List of Symbols . . . . .	201
6.	The effect of flow inhomogeneities of trickling liquid on the course of a heterogeneous catalytic reaction . . . . .	203
6.1.	The effect of flow inhomogeneities of trickling liquid on the behaviour of an adiabatic trickle bed reactor . . . . .	204
6.2.	The effect of flow inhomogeneities of trickling liquid on the behaviour of a cooled trickle bed catalytic reactor in the presence of parallel heat conduction in the solid phase . . . . .	219
6.3.	The effect of flow inhomogeneities of trickling liquid on catalytic hydrogenation of cyclohexene in an adiabatic catalytic reactor . . . . .	224
6.4.	The relation between flow inhomogeneities of trickling liquid and phase changes in a heterogeneous catalytic trickle bed reactor . . . . .	229
	List of Symbols . . . . .	236
7.	Conclusion . . . . .	238
	References . . . . .	240
	Author index . . . . .	255
	Subject index . . . . .	260
