INTRODUCTION 9

GENERAL PART

1. Dietary antioxidants and how our public is informed about them – part one	11
(Milan Pešek, Jan Schuster)	
1.1. Introduction	11
1.2. Methodological part	15
1.3. Results	16
1.4. Discussion	19
1.5. Conclusion	21
2. Dietary antioxidants and how our public is informed about them – part two	23
(Jan Schuster, Milan Pešek)	
2.1. Introduction	23
2.2. Methodological part	26
2.3. The results and discussion	27
2.4. Conclusion	32
3. The importance of antioxidants for healthy lifestyle	34
(Vladislav Kukačka)	
3.1. Lifestyle	34
3.2. Lifestyle areas	39
3.3. Healthy diet	40
3.4. Regular and adequate exercise	41
3.5. Optimal body weight	43
3.6. Quality and sufficient sleep	43
3.7. Limitation and elimination of stress	43
3.8. Adequate relax	43
3.9. Avoidance of negative habits and addictions	44
3.10. Practice of healthy and safe sex	44
3.11. Individual care of your own health	44
3.12. Elimination of negative effects of exogenous factors and the environment	45
3.13. Effort to change a lifestyle positively	45

4. The role of oxidative stress in the etiopathogenesis of civilization diseases	49
(Markéta Kastnerová)	
4.1. Introduction	49
4.2. Oxidative (oxidizing) stress	51
4.3. Antioxidant mechanisms	53
4.4. Oxidative stress biomarkers	54
4.5. Diseases caused by ROS	60
4.6. Oxidative DNA damage and cancer	61
4.7. Neurodegenerative diseases	63
4.8. ROS and viral infection	64
4.9. Conclusion	65

SPECIAL PART

5. Flavonoids – important herbal antioxidants	73
(Eva Dadáková, Štěpánka Cmelová)	
5.1. Introduction	73
5.2. Plant phenolic substances	74
5.3. Biosynthesis of phenolic substances	74
5.4. Flavonoids	76
5.5. Ecochemical functions of flavonoids	77
5.6. Antioxidant effects of flavonoids	78
5.7. Effects of flavonoids on human health	79
5.8. Nutrition sources of flavonoids	80
5.9. Fruits and vegetables	80
5.10. Wine and tea	81
5.11. Medicinal plants	82
5.12. Other nutritional sources of flavonoids	83
5.13. Conclusion	84
6. Selected lignans of dibenzylbutane type as antioxidants and their use	88
(Jan Tříška, Josef Balík, Milan Houška)	
6.1. Introduction	88
6.2. The occurrence of dibenzylbutane-type lignans in plants	89

6.3. The occurrence of dibenzylbutane-type lignans in food	92
6.4. Extraction and isolation of lignans from plant material	95
6.5. Possibilities of extraction of lignans from knots from conifers with hot water	95
6.6. Biological properties of lignans	96
6.7. Transformation of lignans to enterolignans	98
6.8. Foods with added lignans	99
6.9. Grape musts with added lignans	100
6.10. White and red wines enriched with lignans	103
6.11. Beer with the addition of lignans	105
6.12. Fruit and vegetable spreads enriched with lignans	107
6.13. Chocolate with increased content of natural lignans	108
6.14. Conclusion	109
 7. The nutritious and health potential of sea buckthorn (<i>Hippophae rhamnoides</i> L.) (Jaromír Kadlec)	 114
7.1. Introduction	114
7.2. Botanical characteristics and processing of sea buckthorn	115
7.3. The nutritional characteristics of the fruit of the sea buckthorn	117
7.4. Sea buckthorn oil – types and structure	120
7.5. Content and importance of polyphenols in fruits and leaves of the sea buckthorn	125
7.6. Application of sea buckthorn products in the food industry	130
7.7. Conclusion	133
 8. Active substances of pinnate hawthorn – Big Golden Star (<i>Crataegus pinnatifida</i> Bunge) (Pavel Smetana)	 141
8.1. Introduction	141
8.2. Botanical characteristics, processing and utilization of hawthorn (<i>Crataegus pinnatifida</i> Bunge)	141
8.3. Active substances of <i>Crataegus</i>	143
8.4. Taxonomy of <i>Crataegus</i> using phenolic compounds	143
8.5. Antioxidant effects of <i>Crataegus</i>	144

8.6. Cholesterolomy, dyslipidemia	146
8.7. Hepatic damage	147
8.8. Atherosclerosis	147
8.9. Neurodegenerative diseases	148
8.10. Cytotoxicity and autoproliferative effect	148
8.11. Antithrombotic activity	149
8.12. Antiageing	151
8.13. Stability of the active substances during storage	152
8.14. Conclusion	152
9. Antioxidant activity of potato tubers (<i>Solanum tuberosum</i>) and potato hydrolysed proteins	157
(Jan Bárta, Veronika Bártová, František Lorenc, Jiří Diviš, Josef Švajner)	
9.1. Introduction	157
9.2. The importance of proteins and bioactive peptides in oxidative stress control	158
9.3. Potato substance composition and antioxidant potential of tuber proteins	159
9.4. Material and methods	161
9.5. Results and discussions	164
9.6. Conclusion	172
10. Waste products of garden onion (<i>Allium cepa</i> L.): potential source biologically active substances for foodstuffs	177
(Jan Bedrníček)	
10.1. Introduction	177
10.2. Botanical characteristic and history of cultivation	178
10.3. Chemical composition of onions and onion waste	178
10.3.1. Chemical composition of fresh garden onion	178
10.4. Chemical composition of onion waste	183
10.5. Health effects of chemical compounds in onions and onion waste	185
10.6. Use of onion waste for food purposes	187
10.7. Conclusion	190
