

<b>A List of Symbols and Notation Conventions</b>	xi
<b>1 Introduction</b>	1
1.1 Historical sketch	1
1.2 Generalities about populations	5
1.3 A survey of results	9
<b>2 The Galton–Watson Process</b>	19
2.1 Introduction	19
2.2 Moments and the generating function	20
2.3 The extinction probability	22
2.4 Critical processes	24
2.5 A simple but basic lemma	26
2.6 Subcritical processes	28
2.7 Supercritical processes	30
2.8 Attaining high levels	35
2.9 Rate of convergence results for supercritical processes	36
2.10 Prediction in large supercritical processes and another rate of convergence result	37
2.11 The total progeny of a branching process	39
2.12 The relation between a process and its total progeny	42
2.13 Maximum likelihood estimation of the reproduction mean and a Bayes example	45
2.14 Estimation of the extinction probability	50
<b>3 Neighbours of the Galton–Watson Process</b>	54
3.1 Branching processes with immigration	54
3.2 Increasing numbers of ancestors	60
3.3 Approximation by critical processes	63
3.4 A diffusion approximation	67
3.5 Galton–Watson processes in varying environments	70
3.6 Further results for varying environments	77
3.7 Random environments	81

<b>4 Results for Multi-type Processes</b>	87
4.1 Fundamentals	87
4.2 Analogues of classical results	92
<b>5 Interlude about Martingales, Renewal Theory, and Point Processes</b>	97
5.1 Martingales	97
5.2 The renewal equation	104
5.3 Refined renewal theorems	114
5.4 Point processes	120
<b>6 The General Process</b>	123
6.1 Introduction	123
6.2 The finiteness of the process	126
6.3 Moments and the generating functions	129
6.4 More about the second moments	135
6.5 The extinction probability	139
6.6 Critical processes	143
6.7 The subcritical case	156
6.8 Supercritical processes	164
6.9 Populations counted with random characteristics	167
6.10 Almost sure convergence in the supercritical case	169
6.11 The stable age distribution and processes with an ancestor differing from its progeny	176
6.12 The total progeny	182
6.13 Integrals of branching processes and their generalizations	183
6.14 Maximum likelihood estimation of the reproduction mean	186
<b>7 Neighbours of the General Process</b>	190
7.1 Immigration	190
7.2 Increasing numbers of ancestors	199
7.3 Convergence towards criticality	200
7.4 Diffusion approximations	202
<b>8 Branching Processes and Demography</b>	207
8.1 Classical continuous time demography and age dependent birth and death processes	207
8.2 Lotka's equation	209
8.3 The growth of populations	211
8.4 The age at childbearing	214
8.5 The length of generations	215

<b>9 Branching Models in Cell Kinetics</b>	224
9.1 Cell proliferation and binary splitting	224
9.2 Estimation of cell death	228
9.3 The cycle time distribution	230
9.4 The fraction labelled mitoses	232
9.5 FLM functions in binary splitting	236
9.6 Continuous labelling	241
9.7 Arrest methods	245
9.8 Synchrony	248
9.9 The composition of two-type populations: endomitosis and the $G_0$ resting phase	250
 <b>Appendix</b>	 259
 <b>Index</b>	 265
