

## CONTENTS

---

Introduction	1
1: The origin of thought	5
How do babies think and communicate, and how can we understand them better?	
The genesis of concepts	6
Atrophied and persistent synaesthesias	8
The mirror between perception and action	11
Piaget's mistake!	13
The executive system	15
The secret in their eyes	16
Development of attention	18
The language instinct	20
Mother tongue	22
The children of Babel	25
A conjecturing machine	28
The good, the bad and the ugly	31
He who robs a thief . . .	33
The colour of a jersey, strawberry or chocolate	34
Émile and Minerva's owl	38
<i>I, me, mine</i> and other permutations by George	40

Transactions in the playground, or the origin of commerce and theft	41
Jacques, innatism, genes, biology, culture and an image	44
<b>2: The fuzzy borders of identity</b>	<b>47</b>
What defines our choices and allows us to trust other people and our own decisions?	
Churchill, Turing and his labyrinth	48
Turing's brain	49
Turing in the supermarket	53
The tell-tale heart	55
The body in the casino and at the chessboard	57
Rational deliberation or hunches?	59
Sniffing out love	60
Believing, knowing, trusting	63
Confidence: flaws and signatures	64
The nature of optimists	65
Odysseus and the consortium we belong to	69
Flaws in confidence	72
Others' gazes	75
The inner battles that make us who we are	78
The chemistry and culture of confidence	85
The seeds of corruption	91
The persistence of social trust	95
To sum up . . .	97
<b>3: The machine that constructs reality</b>	<b>99</b>
How does consciousness emerge in the brain and how are we governed by our unconscious?	
Lavoisier, the heat of consciousness	99
Psychology in the prehistory of neuroscience	100

Freud working in the dark	102
Free will gets up off the couch	104
The interpreter of consciousness	108
'Performiments': freedom of expression	109
The prelude to consciousness	112
In short: the circle of consciousness	115
The physiology of awareness	117
Reading consciousness	120
Observing the imagination	121
Shades of consciousness	123
Do babies have consciousness?	126
4: Voyages of consciousness (or consciousness tripping)	129
What happens in the brain as we dream; is it possible for us to decipher, control and manipulate our dreams?	
Altered states of consciousness	129
Nocturnal elephants	131
The uroboros plot	134
Deciphering dreams	137
Daydreams	138
Lucid dreaming	141
Voyages of consciousness	143
The factory of beatitude	143
The cannabic frontier	147
Towards a positive pharmacology	149
The consciousness of Mr X	150
The lysergic repertoire	153
Hoffman's dream	155
The past and the future of consciousness	159
The future of consciousness: is there a limit to mind-reading?	165

5: The brain is constantly transforming	169
What makes our brain more or less predisposed to change?	
Virtue, oblivion, learning, and memory	169
The universals of human thought	170
The illusion of discovery	173
Learning through scaffolding	175
Effort and talent	177
Ways of learning	178
The OK threshold	179
The history of human virtue	180
Fighting spirit and talent: Galton's two errors	181
The fluorescent carrot	185
The geniuses of the future	187
Memory palace	190
The morphology of form	193
A monster with slow processors	194
Our inner cartographers	197
Fluorescent triangles	198
The parallel brain and the serial brain	199
Learning: a bridge between two pathways in the brain	200
The repertoire of functions: learning is compiling	200
Automatizing reading	202
The ecology of alphabets	203
The morphology of the word	204
The two brains of reading	206
The temperature of the brain	206
6: Educated brains	211
How can we use what we have learned about the brain and human thought to improve education?	
The sound of the letters	212
Word-tied	214

What we have to unlearn	217
The framework of thought	219
Parallelawhat?	222
Gestures and words	224
Good, bad, yes, no, OK	227
The teaching instinct	228
Spikes of culture	236
<i>Docendo discimus</i>	238
<hr/>	
Epilogue	243
Appendix	245
Bibliography	247
Acknowledgements	264
Index	267
