

Contents

Preface	ix
Acknowledgements	xi
Part I Introduction and project definition	1
Chapter 1 Introduction to data analysis and statistics in geography	3
Chapter 2 The nature of geographical data	10
Chapter 3 Data collection: populations and samples	24
Chapter 4 Inputting geographical data on to the computer	43
Part II Statistical analysis I	69
Chapter 5 Descriptive statistics	71
Chapter 6 Frequency distributions	94
Chapter 7 Bivariate and multivariate frequency distributions: cross-tabulation and scattergrams	120
Part III Statistical analysis II	149
Chapter 8 An introduction to hypothesis testing	151
Chapter 9 An overview of probability distributions	164
Chapter 10 Inferential statistics: univariate, single-sample tests	184
Chapter 11 Inferential statistics: univariate tests for two or more samples	225
Part IV Statistical analysis III	275
Chapter 12 Analysis of relationships: correlation	277
Chapter 13 Analysis of causation: regression	317
Chapter 14 Spatial statistics	344
Chapter 15 Summary of exemplar projects and conclusions	386

Appendices

Appendix I	Village communities project questionnaire	399
Appendix II	Random digits	402
Appendix III	Details of the project datasets	403
Appendix IV	Statistical tables	426

References and selected bibliography	439
Index	443
