

CONTENTS

Preface xiii

PART I FOUNDATIONS

1

The Nature of Learning and Memory 2

Memory Defines Our Individuality 4

Memory Plays a Pervasive Role in Daily Life 7

Amazing Cases of Amnesia 8

The Study of Learning and Memory Has a Long History 12

Modern Scientific Approaches to the Study of Learning and Memory 20

Themes of This Book 23

Chapter Summary 35

2

The Neural Bases of Learning and Memory 38

Cells, Circuits, and Systems 40

Neurons: The Cellular Units of Information Processing 41

Learning & Memory in Action: What Happens to the Brain When We Age? 45

Interconnected Neurons in Brain Circuits Serve Specific Functions 53

Learning & Memory in Action: Can Genetic Alterations Improve Memory? 62

Brain Systems Serve Psychological Functions 63

Chapter Summary 81

PART II UNCONSCIOUS FORMS OF LEARNING AND MEMORY

3

Simple Forms of Learning and Memory 86

Habituation and Sensitization Are Nonassociative Forms of Learning 88

Habituation Occurs within Brain Circuits 89

Habituation Helps Us Study Recognition Memory 91

Learning & Memory in Action: How Do Advertisers Use Dishabituation to Direct Attention to Their Products? 96

Primitive Nervous Systems Reveal the Biology of Habituation 97

Sensitization Increases Responsiveness 100

Learning & Memory in Action: Why Do Horror Movies Heighten Our Responses to Benign Events? 102

Chapter Summary 105

4 Perceptual Learning and Memory 108

Characteristics of Perceptual Learning and Memory 110

Perceptual Skill Learning: Identifying Stimuli 112

Learning & Memory in Action: Can Someone Really Be a "Born Expert"? 113

Learning & Memory in Action: How Can Farmers Distinguish between Male and Female Baby Chicks? 118

Perceptual Memories 130

Chapter Summary 140

5 Procedural Learning I: Classical Conditioning 142

Pavlov Began the Study of Classical Conditioning 144

Classical Conditioning Provides Protocols for Studying Simple Motor Responses 147

Variations in Conditioning Reveal Its Basic Properties 151

Learning & Memory in Action: How Do Clinicians Treat Phobias? 158

Complex Associations in Classical Conditioning 158

The Nature of the Association in Classical Conditioning 162

Neural Circuits Build Reflex Arcs to Support Classical Conditioning 166

Classical Conditioning Can Illuminate Other Memory Systems 172

Learning & Memory in Action: Can Coyotes Be Trained Not to Prey on Sheep? 176

Chapter Summary 178

6 Procedural Learning II: Habits and Instrumental Learning 182

Instrumental Learning Changes Reinforced Behavior to Reflect Memory 184

Reinforcers Modify the Predictive Relationship between Stimulus and Response 185

Learning & Memory in Action: What Is the Basis of Losing Streaks? 189

Animals Learn about the Environment and Expect Reinforcers 191

Humans' Habits and Skills Combine Cognitive Memory and Instrumental Learning of Motor Programs 201

Striatal Cortical Pathways Support Instrumental Learning and Skill Acquisition 203

Learning & Memory in Action: Why Does Stress Often Cause Forgetting? 207

Chapter Summary 216

7 Emotional Learning and Memory 218

Emotion and Memory Mix at Multiple Levels 220

Emotional Learning Can Occur without Conscious Recollection 221

Learning & Memory in Action: Why Do Advertisers Bombard Us with Product Names and Images? 228

Emotions Influence the Strength of Cognitive Memories 229

Neural Circuitry for Expressing Emotions Supports Emotional Learning and Memory 233

Brain Circuits That Support Emotional Arousal and Attention Modulate Cognitive Memory 244

Learning & Memory in Action: Why Are Posttraumatic Stress Disorder and Anxiety So Difficult to Treat? 250

Chapter Summary 252

PART III CONSCIOUS FORMS OF LEARNING AND MEMORY

8 Cognitive Memory 256

Cognitive Memory Is Declarative; Behavioral Memory Is Procedural 260

Cognitive Memory Is Flexible and Inferential 261

Learning & Memory in Action: How Do People Make Creative Leaps? 263

Human Cognitive Memory: Distinct Encoding and Retrieval Strategies 264

Learning & Memory in Action: How Do Mnemonists Perform Their Tricks? 276

Cognitive Memory Uses a Circuit of Cortical Structures and the Hippocampus 277

Animal Models Identify the Role of the Hippocampus in Cognitive Memory 281

Chapter Summary 292

9	Episodic Memory	294
	Defining Episodic Memory	296
	Fundamental Properties of Episodic Memory	300
	<i>Learning & Memory in Action: Eyewitness Testimony</i>	302
	The Hippocampus Supports Episodic Memory	306
	<i>Learning & Memory in Action: Aging and Memory Loss</i>	310
	Episodic Memory May Exist in Animals	314
	Hippocampal Neurons Represent Episodic Memories	324
	Chapter Summary	330
10	Semantic Memory	332
	Defining Semantic Memory	334
	<i>Learning & Memory in Action: How Can Computers Learn to Recognize Speech?</i>	340
	Spatial Memories May Be Organized as Routes or Surveys	341
	<i>Learning & Memory in Action: Designing Cities</i>	344
	The Organization of Semantic Information Processing	345
	Episodic Memory Contributes to Semantic Memory	352
	Chapter Summary	360
11	Memory Consolidation	362
	Studies of Retrograde Amnesia Characterized Memory Consolidation	365
	Memory Consolidation Has Two Distinct Stages	370
	Cellular Events Are the First Stage of Memory Consolidation	371
	<i>Learning & Memory in Action: Blocking Consolidation of Traumatic Memories</i>	375
	The Hippocampal–Cortical System Supports Prolonged Memory Reorganization	376
	<i>Learning & Memory in Action: Does Sleep Aid Memory Consolidation?</i>	386
	Models of Cortical–Hippocampal Interactions Illuminate Memory Reorganization	388
	Chapter Summary	394
12	Short-Term Memory and Working Memory	396
	Defining Short-Term Memory	400
	Working Memory Is Short-Term Memory with Several Components	408

Learning & Memory in Action: How Do Waitresses and Waiters Remember So Much? 412

Working Memory Is Controlled by the Prefrontal Cortex 415

Learning & Memory in Action: What Is It Like to Have Prefrontal Cortex Damage? 419

A Network of Cortical Areas Orchestrates Working Memory 432

Chapter Summary 436

SUBJECT INDEX

- action potential, 46–51
 - adaptation, 89
 - advertising
 - connotations of words and, 228–29
 - dishabituation, 96
 - sensory preconditioning in, 160
 - aging, memory loss and, 310–11
 - agnosia, 345–47
 - akinesia, 207
 - alcohol, 211
 - alternation learning, 192
 - Alzheimer's disease, 138
 - amblyopia, 123
 - amnesia
 - anterograde, 9
 - associative priming and, 136–38
 - Boswell's case, 221
 - causes of, 8
 - childhood amnesia, 299
 - conscious memory in, 134
 - defined, 8
 - emotional learning and, 221
 - episodic memory and, 307–8
 - H. M. case, 133–36, 257–59, 277–78, 355–56, 363–66, 371, 377, 406
 - habit learning and, 210
 - hippocampus and, 209
 - Jimmie G. case, 10–11, 365
 - K. C. case, 306–7
 - perceptual skill learning and, 128–29
 - recall and, 127
 - repetition priming and, 133–36
 - semantic memory and, 353–59
 - short-term memory and, 407
 - Wearing's case, 9–10, 365
 - Y. R. case, 307–8
 - see also* retrograde amnesia
 - amnesic aphasia, 348
 - AMPA receptors, 58, 62, 371
 - amphetamine, 211
 - amygdala
 - amnesia studies, 31
 - cognitive memory and, 257
 - defined, 76, 235–36
 - depicted in brain, 67
 - emotional arousal and, 244–45
 - emotional expression and, 235–43
 - emotional memory and, 240–43, 245–50
 - fear conditioning and, 241–42
 - LTD in, 60
 - LTP in, 60
 - memory consolidation and, 373–74
 - stress experiment, 207
 - Urbach-Wiethe disease, 31, 238, 240–41
 - analogies, 263
 - animal learning
 - amygdala in, 245
 - classical conditioning, 145–47
 - cognitive memory and, 281–92
 - conditioning emotional associations, 226–28
 - emotional memory and, 222–24
