## Part I Evolution by Natural Selection

	10.5 Materian and Genetic Veription in Humant //	
1	Darwin Questions the Fixity of Species	2
'	1.1 Derwin's Early Life and Education	2
	1.2 The Earth's Crust: Uniformitarian and Catastrophist Theories	5
	1.2 The Earth's Crust. Onnormhanan and Catastrophist Theories	с 7
	1.3 The voyage of the <i>Beagle</i> (1831–1836)	10
	1.4 The Experts Provide the Key (1836–1837)	13
2	Darwin's Evolutionary Theories	15
2	2.1 Derwin's Development of Evolutionary Theories	15
	2.1 Datwin's Development of Evolutionary Theories	17
	2.2 On the Origin of Species	17
	2.3 The Reaction to his Theories	26
2	Understanding Natural Selection	27
2	2.1. Learner Constitution Density Theorem	27
	3.1 Incorporating Genetics into Darwin's Theory	27
	3.2 The Philosophy of Natural Selection	31
	3.3 Is Natural Selection a Valid Scientific Theory?	31
	3.4 The Argument from Design	32
	3.5 Explaining the Seemingly Impossible	33
	3.6 Conclusions	42
	Quantifying Population Subdivision	
	Part II Population Growth Models	43
1	Exponential Growth	15
-	4.1 Introducing Density Independent Crowth	45
	4.1 Introducing Density-Independent Growth 4.2 Developing the Cosmetric and Europeantial Crowth Madela	43
	4.2 Developing the Geometric and Exponential Growth Models	40
	4.3 Applying the Geometric and Exponential Growth Models	49
	4.4 Simulating Exponential and Geometric Growth	51

xiv

1

	Contents	
	4.5 Two Examples of Exponential Growth	5
	4.6 Summary and Conclusions	5
	4.7 Problems	5
5	Logistic Growth	5
	5.1 The Logistic Growth Model	5
	5.2 Simulating Logistic Growth	4
	5.3 Time Lags	(
	5.4 Varying the Carrying Capacity	(
	5.5 Examples of Logistic Growth	(
	5.6 Maximum Sustainable Yield	6
	5.7 Summary and Conclusions	(
	5.8 Problems	e
6	Life Tables	6
	6.1 Developing a Life Table	(
	6.2 Different Types of Life Tables	1
	6.3 Comparison of Life Tables	8
	6.4 Summary and Conclusions	8
7	Growth of Age-Structured and Stage-Structured Populations	8
	7.1 Population Growth Rates in Age-Structured Populations	8
	7.2 Analysing the Influence of Demographic Variables on Population Growth Rates	(
	7.3 Analysing Stage-Classified Life Cycles	9
	7.4 Summary and Conclusions	9
	7.5 Problem	9
8	Evolution of Life Histories	10
	8.1 Reproductive Value	10
	8.2 Frequency of Reproduction: Semelparity Versus Iteroparity	10
	8.3 Life Span and Aging	10
	8.4 Senescence: Comparing Theory and Empirical Observations	1
	8.5 Summary	12
	Part II Population Growth Models	
	Part III Population Genetics and Evolution	12
0	The Hardy Mainharg Principle	1.
9	The nardy-weinberg Principle	12
	9.1 Terminology	Ľ
	9.2 Frequencies of Alleles, Genotypes and Phenotypes	12

	Contents	VII
	9.3 The Hardy–Weinberg Principle	127
	9.4 Applying the Hardy–Weinberg Principle	129
	9.5 Complications	133
	9.6 Non-Random Mating	136
	9.7 Summary and Conclusions	137
	9.8 Problems	137
10	Mutation and the Genetic Variation of Populations	139
	10.1 Gene Mutations	139
	10.2 The Randomness of Mutations	141
	10.3 Mutation Rates and Evolution	142
	10.4 Genetic Variation of Populations	146
	10.5 Mutation and Genetic Variation in Humans	152
	10.6 Summary and Conclusions	155
2	16.1 Types of Quantitative Traits	
11	Genetic Drift and Effective Population Size	156
	11.1 Genetic Drift in Idealized Populations	157
	11.2 Genetic Drift in a Biological Population	161
	11.3 Effective Population Size	164
	11.4 Examples of Genetic Drift in Nature	166
	11.5 Summary and Conclusions	172
10	16.8 Problem and Community Structure	339
12	Inbreeding	173
	12.1 Quantifying Inbreeding	174
	12.2 Consequences of Inbreeding	1/8
	12.3 Summary and Conclusions	182
13	Migration Cone Flow and Differentiation of Penulations	102
13	13.1. One way Migration: the Continent Island Medal	103
	13.2 Island Model	104
	13.3 Stepping-Stope Model	188
	13.4 Populations with Large Continuous Distributions	100
	13.5 Quantifying Population Subdivision	190
	13.6 Estimating Gene Flow	196
	13.7 Summary and Conclusions	200
	13.8 Problems	200
	18.1, The Lotka-Volterra Model of Interspecific Competition	200
14	Haploid and Zygotic Selection	202
	14.1 Defining Fitness and Selection	202
	14.2 Selection in Action	203

Contents

viii

	14.3 Modelling Haploid Selection	204
	14.4 Conclusions About Haploid Selection	206
	14.5 Zygotic Selection Models	207
	14.6 Conclusions About Zygotic Selection	212
15	Applying Zygotic Selection Models to Natural Systems	218
	15.1 Industrial Melanism	218
	15.2 Sickle-Cell Anaemia	230
	15.3 Eugenics	232
	15.4 The Balance between Selection and Mutation	233
	15.5 Summary and Conclusions	236
	15.6 Problems	236
16	Polygenic Inheritance and Quantitative Genetics	239
	16.1 Types of Quantitative Traits	239
	16.2 Polygenic Inheritance	239
	16.3 Partitioning Phenotypic Variation	241
	16.4 Heritability	246
	16.5 Response to Selection	247
	16.6 Empirical Examples	250
	16.7 Summary and Conclusions	255
	16.8 Problem	255
17	Population Genetics: Summary and Synthesis	256
	17.1 Mutations and Genetic Diversity	256
	17.2 Genetic Differentiation of Populations	258
	17.3 Limiting the Divergence between Subpopulations: Gene Flow	262
	17.4 Evolution of New Adaptations	264
	17.5 Epigenetics	267
	13.3 Stepping-Stone Model	
	Part IV Interactions between Species,	
	and Community Structure	269
10	Interspecific Competition	271
10	18.1. The Lotka-Volterra Model of Interspecific Competition	271
	18.2 Complicating the Model: Introducing a Demoval Easter	274
	18.2 Completing the Woodels Removal Factor	219
	18.4 Evaluating Competition Models	200
	10.4 Evaluating Competition Wodels	290

	Contents	ix
	18.5 Summary and Conclusions	295
	18.6 Problems	295
19	Predator–Prey Interactions	297
	19.1 Cycles in Predator–Prey Densities	297
	19.2 The Lotka–Volterra Model of Predation	298
	19.3 The Rosenzweig and MacArthur Graphical Model of Predation	303
	19.4 Functional Responses of Predators	304
	19.5 Choosing Where to Forage: Patch Selection	312
	19.6 Prey Characteristics that Reduce the Risk of Predation	314
	19.7 Summary and Conclusions	324
20	Species Interactions and Community Structure	325
	20.1 The Trophic Structure of Communities	325
	20.2 The Ecological Niche	327
	20.3 Niche Evolution: Reducing Interspecific Competition	328
	20.4 Empirical Examples Showing the Relationship between Species' Niches and	pulation
	Community Structure	330
	20.5 Evolution of Niches: an Example	333
	20.6 Predation, Herbivory and Community Structure	337
	20.7 Parasites and Community Structure	338
	20.8 Mutualism and Community Structure	339
	20.9 Summary and Conclusions	343
	Part V Animal Behaviour, Altruism	
	and Sexual Selection	345
	was designed for second- or third-year students seeking a broad introdu	chonin
21	Animal Behaviour, Altruism and Limiting Aggression	347
	21.1 Genetic Basis of Behaviour	347
	21.2 The Development of Evolutionary Theories of Altruism	350
	21.3 Studies of Kin Selection	353
	21.4 Altruism: a Summary and Recent Developments	357
	21.5 Aggressive Behaviour and Game Theory	358
	21.6 Summary and Conclusions	366
22	Sexual Selection and Mating Systems	367
	22.1 Sexual Selection, Parental Investment and Mating Systems	367
	22.2 Examples of Sexual Selection	370
