1	Introduction to Psychophysiology	1
	Approach and Definitions of Psychophysiology	1
	Activities and Subject Matter	2
	Historical Development of Psychophysiology	3
	Contemporary Psychophysiology	9
	Applications of Psychophysiology	9
	Importance of Brain Measures	10
	Physiological Measures in Relation to the Nervous System	10
	Aims and Organization of This Book	12
2	Concepts in Psychophysiology	16
	The Law of Initial Values	16
	Autonomic Balance	19
	Activation	21
	Stimulus-Response (SR) Specificity	25
	Individual-Response (IR) Specificity	28
	Cardiac-Somatic Concept	29
	Concepts and Social Psychophysiology	31
	Habituation and Rebound	32
	Orienting and Defensive Responses	33
	Conceptualizations Concerning Event-Related Potentials	34
	Hebb's Cell Assembly Theory and ERPs	36
3	The Nervous System and Measurement of Its Activity	43
	Source of the Brain's Electrical Activity	43
	The Neuron	44
	Excitation of Neurons	45
	Neurotransmitters	48
	Neuron Potentials	50
	The Action Potential of the Neuron	51

	Gross Brain Anatomy	52	
	The Electroencephalogram (EEG)	56	
	Alpha Waves	58	
	Beta Waves	58	
	Delta Waves	58	
	Theta Waves	58	
	Kappa Waves	58	
	Lambda Waves	58	
	Mu Waves	58	
	Gamma Waves	59	
	Measurement of the EEG	59	
	Electrode Location (Monopolar)	59	
	Electrode Attachment	60	
	Electrode Location (Bipolar)	63	
	The Peripheral Nervous System	63	
	The Somatic System	63	
	The Autonomic Nervous System	64	
	Sympathetic Nervous System	65	
	Parasympathetic Nervous System	67	
	The Cranial Nerves	67	
4	The EEG and Behavior I: Motor and Mental Activities		75
	Motor Performance and the EEG	75	
	Reaction Time and EEG	75	
	EEG Activation and RT	76	
	The Activation Concept and EEG	76	
	The EEG Period	77	
	Variations in EEG Activation Across Cortical Areas	78	
	EEG Coherence and Brain Function	78	
	EEG Patterning	79	
	EEG and Cognitive Activity	80	
	EEG and Intelligence (The Search for a Culture-Free Test)	80	
	EEG Period	81	
	EEG Spectral Analysis	81	
	EEG Coherence	82	
	EEG Complexity	82	
	EEG Alpha Power	82	
	EEG in Memory and Recall	84	
	Gamma Wave Activity	84	
	Event-Related Desynchronization	84	
	Working Memory and Cognitive Ability	84	
	Hemispheric Asymmetries in the EEG	86	
	Behavioral Studies Showing Asymmetries	86	
	EEG Studies Showing Asymmetries	86	
	EEG Asymmetries in Emotional Expression of Infants	88	
	EEG Asymmetries in Emotional Expression of Adults	89	
	EEG, Hypnosis, Imagery, and Meditation	90	
	Hypnosis	90	
	Imagery	90	

	Meditation	92	
5	The EEG and Behavior II: Sensation, Attention, Perception, Conditioning and Sleep		97
	Sensation, Attention, Perception and the EEG	99	
	Sensation and the EEG	99	
	Stimulus Complexity	99	
	Stimulus Thresholds	99	
	Odor Stimulation and EEG Pattern	100	
	Attention and the EEG	101	
	Attention	101	
	Vigilance and Signal Detection	101	
	Perception and the EEG	103	
	Perceptual Structuring	103	
	Reversible Figures	104	
	Conditioning of the EEG	104	
	Classical Conditioning of EEG	104	
	Operant Conditioning of EEG	105	
	Expectancies and Noncontingent Stimuli	106	
	Sleep and the EEG	106	
	The Nature of Sleep EEG	107	
	EEG and Dreaming	109	
	Depth of Sleep and Capacity to Respond	110	
	Dreaming and REM Sleep	111	
	Learning During Sleep	112	
	Effects of Work Schedule and Exercise on Sleep EEG	113	
	Work Schedule	113	
	Exercise	114	
	Sleep Deprivation and Sleep Onset	115	
	Sleep Deprivation	115	
	Sleep Onset	116	
6	Event-Related Brain Potentials and Behavior I: Measurement, Motor Activity, Hemispheric Asymmetries, and Sleep		122
	Origin of Event-Related Potentials (ERPs)	124	
	Brain Stem or "Far Field Potentials"	125	
	Sensory ERPs	125	
	Motor Potentials	125	
	Long-Latency Potentials	126	
	Steady Potential Shifts (Contingent Negative Variation and Readiness Potential)	126	
	Method for Obtaining ERPs	127	
	Quantification of ERPs	132	
	ERPs and Behavior	133	
	ERPs and Motor Performance	134	
	Reaction Time	134	
	Bisensory Stimulation	134	
	Motor Activity and the ERP	135	
	Active and Passive Motor Potentials	136	

	Finger Versus Foot Motor Potentials	136
	MP-Visual ERP Interactions	137
	Hemispheric Asymmetries in ERPs	137
	Asymmetries With Visual Stimulation	137
	ERPs and Interhemispheric Transfer Time (IHTT)	137
	The Importance of Central Fixation in Visual ERP Asymmetry Research	138
	Facial and Emotional Stimuli	139
	Asymmetries with Auditory Stimulation	139
	Sounds	139
	Words	139
	Asymmetries and Cognitive Functions	140
	Intelligence	140
	Verbal and Spatial Tasks	140
	Evaluative Categorizations	141
	The ERP and Sleep	141
7	Event-Related Potentials and Behavior II: Mental, Sensory, Attentional, and Perceptual Activities	150
	Event-Related Potentials and Mental Activity	150
	ERPs and Intelligence	150
	The ERP as a Culture-Free Measure of Intelligence?	150
	The Neural Efficiency Hypothesis	151
	The String Hypothesis	152
	P300 and Intelligence	152
	ERPs and Stimulus Meaning	153
	ERPs and Linguistic Processes	155
	Noun and Verb	155
	Words and Sounds	156
	The P300 System	156
	N400 and Semantic Mismatch	156
	Open- and Closed-Class Words	157
	Conditioning and ERPs	158
	Classical Conditioning	158
	Operant Conditioning	158
	Sensation, Attention, Perception, and ERPs	159
	Sensation and ERPs	159
	Smell	159
	Taste	160
	Touch and Pain	161
	Acceleration	161
	Attention and ERPs	162
	Selectivity in Attention	162
	Mismatch Negativity	163
	Intermodal and Intramodal Selective Attention	164
	Resource Allocation	165
	Perception and ERPs	165
	Shape	165
	Pattern Size	165

	Blurring and Pattern Perception	166
	Perceptual Discrimination and P300	166
	Corners	166
	Visual Masking	168
	Motion	171
8	Event-Related Slow Brain Potentials and Behavior	178
	The Contingent Negative Variation (CNV)	178
	CNV and Reaction Time	180
	CNV and Distraction-Attention	180
	CNV and Effort	181
	Stimulus Modality and the CNV	182
	Other CNV Phenomena	182
	Postimperative Negative Variation (PINV)	183
	S1 Frequency	183
	Sexual Preference	183
	Missing Stimuli	183
	CNV and Working Memory	184
	The Readiness Potential (RP), or Bereitschaftspotential	184
	Distinctions Between CNV and RP	184
	Psychological Influences on the RP	185
	The RP in Simple and Complex Movements	186
	Spontaneous and Planned Movements	186
	RP and Site of Body Response	186
	Maturational Influences on the RP	187
	Stimulus-Preceding Negativity (SPN)	187
	The P300 or P3 Potential	187
	Number of Trials for P300	188
	Decision Making, Decision Confidence, and P300	188
	The P300 and Probability of Stimulus Occurrence	189
	Selective Attention and P300	191
	Stimulus Set and Response Set	191
	The N1 and Nd Components	191
	The P3a and P3b	191
	Modality Effects	193
	Heredity and Age Effects	193
	P300 and the Orienting Response (OR)	194
	Habituation of P300	195
	P300 and Detection and Discrimination of Stimuli	195
	Stimulus Detection	195
	P300 to Omitted Stimuli	196
	Discrimination of Stimuli	196
	P300 and Memory	197
	The Sternberg Task	197
	Digit Span	198
	The Von Restorff Effect and Learning (Recall)	198
	Recognition Memory	198
	Concepts and Models of P300	199
	Relationship Between CNV and P300	200

9	Neuroimaging, Neuromagnetism, and Behavior	208
	Positron Emission Tomography (PET) 209	
	Functional Magnetic Resonance Imaging (fMRI) 211	
	Optical Imaging Techniques 212	
	Biomagnetism and the Magnetoencephalogram (MEG) 213	
	Neuromagnetism: The MEG and Magnetic Evoked Field (MEF) 213	
	Neuroimaging and Behavior 216	
	Attention 216	
	Perception 217	
	Odor Perception 217	
	Pain 217	
	Visual Imagery 218	
	Memory Functions 218	
	Language Processing 219	
	Emotion 221	
	Brain Plasticity 223	
	Overall Summary 224	
10	Muscle Activity and Behavior	229
	The Control of Motor Behavior 230	
	Anatomy and Physiology of Muscles 230	
	Skeletal Muscle 231	
	Mechanisms of Muscle Contraction 232	
	The Motor Unit 232	
	Muscular Contraction at the Molecular Level 233	
	Muscle Fatigue 233	
	Muscular Hypertrophy 233	
	The Measurement of Muscle Activity 234	
	Electromyography (EMG) 234	
	General Properties of the EMG 234	
	Muscular Effort and the EMG 234	
	The EMG Waveform 235	
	Electrode Placement for EMG Recording 236	
	Specific Electrode Placements 237	
	Recording the EMG 237	
	Other Procedural Considerations 239	
	The EMG and Performance 239	
	Adequacy of Activation Theory in EMG Studies 240	
	EMG and Reaction Time 240	
	EMG and Tracking 241	
	EMG and Probability of Successful Performance 241	
	EMG Gradients and Motivated Performance 242	
	EMG, Motivation, and Fatigue 243	
	Muscular Fatigue and Performance 244	
	EMG and Speech 244	
	EMG and Sleep 246	
	EMG Conditioning 246	
	Operant Conditioning 247	
	Classical Conditioning 248	

	Facial Expression of Emotion and the EMG 248	
	The Early Work 248	
	Contemporary Studies Using Facial EMG 248	
	Is Emotional Contagion Indicated by Facial EMG? 249	
	Facial EMG in Emotionally Charged Imagery and Visual Displays 249	
	Do People Mimic the Emotional Expression of Others? 252	
	Facial EMG and Anger In and Out 252	
11	Electrodermal Activity (EDA) and Behavior	259
	Anatomy and Physiology of the Skin 260	
	Types and Distribution of Sweat Glands 260	
	Nervous System Control of EDA 261	
	Functions of the Skin and Sweating 263	
	Types of Electrodermal Activity 263	
	Skin Conductance 264	
	Skin Potential 265	
	Origin of EDA 265	
	The Measurement of EDA 265	
	Skin Conductance Level (SCL) 265	
	Skin Potential 265	
	Electrodes for Recording EDA 267	
	Ground Electrodes 267	
	Analysis of EDA Data 267	
	Electrodermal Phenomena and Behavior 268	
	Reaction Time 268	
	Level of Arousal 268	
	Fixed and Variable Signal Schedules 269	
	High NS-SCRs (Labiles) and Low NS-SCRs (Stabiles) 269	
	Mental Activity 270	
	Learning and Memory 270	
	Arousal 270	
	Habituation 270	
	Memory 271	
	Positive and Negative Emotion and EDA 271	
	Music and Imagery 271	
	Observed Violence 271	
	Erotic Stimuli 272	
	Emotional Expression 272	
	Mother-Infant Interaction 272	
	Motivation and SCR Recovery Time 273	
	Signal Detection and EDA 273	
	Vigilance 274	
	Recognition of Faces 274	
	Unconscious Recognition?—Faces 274	
	Unconscious Recognition?—Words 275	
	The Orienting Response and EDA 275	
	Neuronal Model 276	
	Stimulus Distance and Change 276	
	Habituation 277	

	Role of Stimulus Significance	277
	Information-Processing Model	278
	Stimulus Omissions	278
	Alcohol Effects	278
	Conditioning of EDA	279
	Classical Conditioning of EDA	280
	Affective Value of the CS	280
	Phobias	280
	Unconditioned Response Probability and CS-UCS Interval	281
	Instrumental Conditioning of EDA	281
12	Pupillary Response and Behavior	289
	Anatomy and Physiology of the Pupillary Response	290
	Measurement of Pupillary Size	290
	Fatigue and Pupillary Size	291
	Pupillometry and Behavior	293
	Affective Value of Stimuli and Pupil Size	293
	Interest Value of Stimuli	293
	Response to Pain	293
	Sexual Arousal or Novelty?	293
	Affective Words	294
	Pupil Size and Nonverbal Communication	294
	Pupil Size and Mental Activity	295
	Short-Term Memory	296
	Language Processing	297
	Perception	298
	Task Difficulty	298
	Stimulus Probability	299
	Intelligence	299
	Negative Affect	299
	Attitudes	300
	Information Processing, Learning, and Pupil Size	300
	Information Processing	300
	Learning	301
	Pupillometry in Schizophrenia	303
13	Eye Movements, Eye Blinks and Behavior	308
	Eye Movements	308
	The Control of Eye Movements	308
	The Nature of Eye Blinks	310
	Recording Eye Movements and Eye Blinks	311
	Problems in EOG Recordings	312
	Preparation of Electrodes and Subject	312
	Eye Movements and Behavior	313
	Mental Activity and Eye Movements	313
	Eye Movements and Learning	313
	Eye Movements, Problem Solving, and Laterality	315
	Problem Solving	315
	Hemispheric Dominance and Eye Movement	315

Eye Movements and Reading	316
Reading Efficiency	316
Reading Disabilities and Eye Movements	317
Eye Movements and Perception	318
Scan Paths	318
Pictorial Information	318
Eye Movements and Illusions	320
Muller-Lyer Illusion	320
Rebound Illusion	321
Eye Movements and Psychopathology	322
Schizophrenia	322
Manic Depression	323
The Eye Blink (EB) in Cognition, Information Processing, Stress, and Fatigue	324
Cognitive Activity and Eye Blinks	324
Information Processing	324
Stress	325
Fatigue	325
Emotional Judgments	325
The Eye Blink Component of the Startle Response in Attention and Emotion	326
Eye Blink and the Startle Response	326
Inhibition of the EB Startle Response	326
Attentional Processing With Short and Long Lead Intervals	327
Allocation of Attentional Resources	327
The EB Component of the Startle Response in Emotion	328
Emotional Valence and Physiological Arousal	329
Positive and Negative Sensory Experience	329
The EB Component of Startle in Clinical Research	330

14

Heart Activity and Behavior I: Developmental Factors, Motor and Mental Activities, Perception, Attention and Orienting Responses	336
Psychophysiology Concepts	336
Why Cardiovascular Research?	337
Anatomy and Physiology of the Heart	337
Heart Structures Involved in Blood Circulation	337
Control of the Heartbeat (Cardiac Cycle)	339
Internal Cardiac Control	339
External Cardiac Control	339
Carotid Sinus Reflex	340
Measurement of Heart Activity (Electrocardiogram or ECG)	340
Wave Component Durations	340
Limb Leads for Recording the ECG	341
Amplitude and Recording Characteristics of the ECG	342
Measures in Research	342
Impedance Cardiography	343
Obtaining Baseline Measures	345
Electrodes in ECG Recordings	346
Heart Activity and Behavior	346

	Developmental Factors	346
	Attention and Heart Rate (HR)	347
	Emotional Reactions in Children	347
	Performance and Heart Activity	349
	Reaction Time	349
	Complex Motor Performance and Heart Activity	350
	Heart Activity and Mental Performance	351
	Verbal Learning	351
	Problem Solving	352
	Imagery and Meditation	352
	Heart Activity and Perception	354
	Perceptual Thresholds	354
	Stimulus Significance	354
	Heart Activity, Attention, and the Orienting Response	355
15	Heart Activity and Behavior II: Stress, Emotions, Motivation, Personality, Social Factors, Brain Interactions, and Conditioning	362
	Heart Rate and Affective Processes	362
	Stress	362
	Emotional Response	364
	Patterns of Emotional Response	364
	Detection of Physiological Changes in Emotion	366
	Influence of Physiological Response on Felt Emotion	366
	Frustration and Fear	366
	Motivation	367
	Incentive and Competition Effects	367
	Cardiovascular Reactivity (CVR), Personality, and Social Factors	368
	Cardiovascular Reactivity	368
	Gene and Modulated Reactivity Hypothesis	369
	Personality	369
	Type A Women and Cardiac Response	370
	Parental History of Hypertension as a Factor	371
	Hostility, Anger, and CVR	371
	Social Factors	373
	Social Support and Coping	373
	Social Context	374
	Cognitive Dissonance	374
	Interactions Between Heart and Brain Activity	375
	Sensitivity to Signals	375
	Hemispheric Differences in Brain-Heart Interactions	376
	The CNV and Heart Activity	376
	Conditioning of Heart Activity	378
	Classical Conditioning	378
	Instrumental Conditioning	379
16	Blood Pressure, Blood Volume, and Behavior	386
	Anatomy and Physiology of the Blood Vessels	387
	Innervation of Blood Vessels	388
	Regulation of Blood Pressure	388

Regulation of Blood Volume	389
Measurement of Blood Pressure	390
Measurement of Blood Volume	391
Blood Pressure and Behavior	393
Mental Activity and Blood Pressure	393
Mental Load and Problem Solving	393
Meditation	394
Emotional Reactions, Stress, and Blood Pressure	394
Frustration and Aggression	394
Emotional Imagery and Negative Emotions	395
Naturalistic Stress	395
Active and Passive Coping and CVR to Stress	396
Social-Environmental Factors and Blood Pressure	398
Socioeconomic Status (SES)	398
Social Communication	398
Effects of "Sociotropy"	399
Marital Stress	399
Crowding	400
Pets	400
Social Support	401
Aerobic Fitness and Auditory Stimulation	401
Aerobic Fitness	401
Auditory Stimulation	402
Personality Factors Affecting Blood Pressure	403
Type A and B Personality Patterns	403
Children and Teens	403
Type A and B Women	404
Cardiovascular Reactivity, Hostility, and Anger	405
Heredity as a Factor in Cardiovascular Reactivity	406
Big Dippers and Little Dippers	407
Conditioning of Blood Pressure	409
Blood Volume and Behavior	410
Blood Volume and Sexual Response	410
Blood Volume and the Orienting Response	412
Conditioning of Blood Volume	413

17	Applied Psychophysiology I: Detection of Deception, Vigilance, Job Design, and Workload	420
	Detection of Deception	420
	Historical Background	420
	Laboratory Studies in the Detection of Deception	423
	Autonomic Nervous System Measures	423
	"Countermeasures" in Detection of Deception (DOD)	424
	Other Measures in DOD	425
	The P300 Component of the ERP in Detecting Deception	425
	Scientific Controversy and DOD	426
	Physiological Correlates of Vigilance and Workload	428
	Vigilance	428
	Psychophysiology in Ergonomics	429

	Job Workload	430
	Job Strain	431
	Personnel Applications	433
	Job Satisfaction and Design	433
	Human-Computer Interaction	433
	Personnel	434
18	Applied Psychophysiology II: Auditory and Visual System Tests, Nervous System Disorders, Clinical Neurology, and Behavior Disorders	438
	Clinical Applications of Physiological Measures	438
	Auditory System Tests	438
	The Brain Stem Potential	438
	Visual System Tests	440
	Visual ERPs and Visual System Defects	440
	Developmental Visual ERPs	441
	Visual ERPs in Down Syndrome Infants	441
	ERPs in Assessment of Dyslexia and Language	443
	The EEG and ERP in the Evaluation of Nervous System Disorders	443
	The EEG in Epilepsy and Other Abnormalities	443
	The ERP in Closed Head Injury	444
	The ERP in "Brain Death"	445
	Brain Stem Potential Recordings in Neurological Diagnoses	445
	ERPs in Clinical Neurology	446
	Multiple Sclerosis	446
	CNS Degenerative Disease	447
	Huntington's Chorea	447
	Parkinson's Disease	447
	Alzheimer's Disease	447
	Progressive Supranuclear Palsy	448
	Human Immunodeficiency Virus (HIV)	448
	Physiological Responses and Behavioral Disorders	449
	Brain ERPs and Psychiatric Diagnosis	449
	Psychopathy	451
	Physiological Markers of Substance Abuse	452
	EEG and Schizophrenia	453
	Electrodermal Activity and Behavioral Disorders	453
	Cardiovascular Activity and Panic Disorder	454
	HR, EEG, and Attention Deficit Hyperactivity Disorder (ADHD)	455
	EEG, fMRI, and Obsessive-Compulsive Disorder (OCD)	456
	EEG, fMRI, and Depression	457
	Eye Movements and Neurological Disease	458
19	Applied Psychophysiology III: Biofeedback and Psychoneuroimmunology	464
	An Example of a Biofeedback Training (BFT) Situation	465
	The Electromyogram (EMG) in Biofeedback Applications	466
	EMG and Tension Headache	466
	EMG Feedback in Neuromuscular Disorder	467
	EMG Feedback and Asthma	468
	EMG Feedback and Hyperactivity	471

The Electroencephalogram (EEG) in Biofeedback Applications	471
EEG Biofeedback and Epilepsy	472
EEG Biofeedback and Attention Deficit Hyperactivity Disorder (ADHD)	474
Applications of Skin Temperature BFT	476
Skin Temperature BFT and Raynaud's Disease	476
Skin Temperature BFT and Hypertension	477
Skin Temperature BFT and Migraine	479
Overall Conclusions Regarding Clinical Applications of BFT	480
Psychoneuroimmunology (Brain, Behavior, and Immunity)	481
The Immune System	481
Cell-Mediated Immunity	482
CNS and Immunity	482
Humoral Immunity	483
Neuroendocrine Hormones, SNS and Immunity	483
The Hypothalamic-Pituitary-Adrenal (HPA) Axis and Immune Response	484
Evaluation of Immune System Functioning	484
The Immune System and Behavior	485
Natural Stress and Immune Function	485
Chronic Stress and Immune Function	486
Laboratory Stressors and Immune Function	488
Cardiac Versus Vascular Reactors	488
Interpersonal Relationships	489
Psychological Interventions and Immune Function	490

20

Environmental Psychophysiology	498
Internal and External Environmental Factors and the EEG	499
Drugs	499
LSD	500
Marijuana	500
Nicotine	500
Heroin and Methadone	501
Alcohol	501
Caffeine	502
Hormones	502
Oxygen	503
Radiation	504
Electromagnetic Fields (EMFs)	504
Effects of Environmental Factors on Event-Related Potentials (ERPs)	505
Drugs	505
Tranquilizers and Barbiturates	506
Effects of Marijuana on the ERP	508
Alcohol	508
Nicotine	509
Caffeine	510
EMF and Preparatory Slow Brain Potentials	510
Tryptophan Effects	510
Neurotoxic Substances	510

Effects of Hormones on the ERP	512	
Environmental Factors and the Electromyogram (EMG)	513	
Drugs	513	
Exercise	513	
Environmental Factors and Electrodermal Activity	514	
Hormones and Drugs	514	
Alcohol	514	
Environmental Factors, Pupil Size, and Eye Movements	514	
Effects of Drugs on Pupil Size	514	
Effects of Drugs on Eye Movements	515	
Environmental Factors and Heart Activity	515	
Drugs	515	
Nicotine	516	
Marijuana	516	
Cocaine	516	
Caffeine	516	
Environmental Factors and Blood Pressure	517	
Drugs	517	
Caffeine, Alcohol, and Nicotine	518	
Exercise and Blood Pressure	518	
Hormones	518	
Appendix: Laboratory Safety		526
Protection Against Electric Shock	526	
Methods of Accident Prevention	527	
Grounding	527	
Use of Low Voltage	527	
Isolation of Subject-Connected Parts	527	
Ground-Fault Interrupter	527	
Do's and Don'ts	527	
Do's	527	
Don'ts	528	
Additional Safety	528	
Reducing Risk of Disease Transmission	528	
Infectious Diseases	528	
Risk Factors in Psychophysiological Research	529	
Low Risk	529	
Moderate Risk	529	
High Risk	529	
Risk Reduction Procedures	529	
Wearing Sterile Gloves	529	
Skin Preparation	529	
Electrodes	529
