1	Earth's Climate System	1
1.1	Introduction	1
1.2	Components of the Climate System	2
1.3	Interactions among Components	6
1.4	Forcing Agents	7
1.5	Cycles in the Climate System	11
1.6	Outline of the Book	17
2	Climate Analysis: Goals and Methods	19
2.1	Introduction	19
2.2	The Basics of Climate Analysis	20
2.3	Analysis of Data from a Single Location	31
2.4	Analysis of Data Fields	35
2.5	Budget Analyses and Other Climate Studies	37
2.6	Summary	38
3	Climate Analysis: Atmospheric Instruments, Observations, and Datasets	40
3.1	Introduction	40
3.2	Direct Surface Observations	41
3.3	Direct Upper Air Observations	44
3.4	Remotely Sensed Observations	46
3.5	Atmospheric Climate Datasets	53
3.6	Summary	62
4	Climate Variability	64
4.1	The Mean Climate	66
4.2	The Mean Seasonal Cycle	70
4.3	Patterns of Climate Variability	89

4.4	Interactions among Climate Variability on Various Time Scales	101
4.5	Summary	102
5	Climate Change	104
5.1	Introduction	104
5.2	Discussion of Definitions	105
5.3	Information Sources	107
5.4	Natural Climate Change on Long Time Scales	109
5.5	Shorter Time Scale Climate Variations	111
5.6	Anthropogenic Climate Change	114
5.7	Future Climate Change	124
6	Temperature: Building Climate Datasets	127
6.1	Introduction	127
6.2	Surface Air Temperature Over Land	128
6.3	Temperature Scales	132
6.4	Observational and Instrumental Considerations	133
6.5	Datasets Based on Station Data	137
6.6	Gridded Temperature Datasets Based on Observations	140
6.7	Other Estimates of Surface Air Temperature	143
7	Precipitation: Combining <i>In Situ</i> and Remotely Sensed Observations in Constructing Climate Datasets	145
7.1	Introduction	145
7.2	Measurements, Estimates, and Inferences	147
7.3	Analyses	157
7.4	Extending the Record – Reconstructions	165
8	Ocean Climate Datasets	168
8.1	Introduction	168
8.2	Sea Surface Temperature (SST)	169
8.3	Creating Global SST Fields	173
8.4	Other Ocean Surface Properties	177
8.5	The Ocean's Subsurface	179
8.6	Summary	187
9	Cryosphere	189
9.1	Snow Observations and Datasets	190
9.2	Sea Ice Data and Observations	194
9.3	Land-Based Permanent Ice	197
9.4	Observations of Ice on Lakes, Ponds, and Rivers	199
9.5	Permafrost Observations	201
9.6	Climate Variability in the Cryosphere	201
9.7	Summary	207

10	Land Component of the Climate System	209
10.1	Introduction	209
10.2	Mean Land Features and Their Role in Climate	210
10.3	Variable Land Features and Climate Variability	212
10.4	Mean Land-Feature Data for Climate Analysis	214
10.5	Variable Land Data for Climate Analysis	217
10.6	Land Surface in Budget Studies	223
10.7	Land Surface Models and Data Assimilation Systems	227
10.8	Drought	228
10.9	Summary	232
11	Climate Models as Information Sources and Analysis Tools	234
11.1	Introduction	234
11.2	Generating Numerical Model Data for Climate Analysis	235
11.3	Characteristics of Model Generated Data	237
11.4	Model Validation	241
11.5	Model-Based Climate Diagnostics	242
11.6	Advantages and Limitations of Models in Climate Analysis	244
11.7	Summary	248
12	Operational Climate Monitoring and Prediction	250
12.1	Introduction	250
12.2	History	250
12.3	Climate Monitoring and Forecast Products	267
12.4	A Look Forward	277
	<i>Appendix A A Short Guide to Some Statistics Used in Climate Analysis</i>	283
	<i>Appendix B Vorticity/Divergence, Stream Function/Velocity Potential</i>	290
	<i>Appendix C Preliminary Examination of the Data</i>	292
	<i>Appendix D Components of the Mean Water Budget</i>	295
	<i>Glossary</i>	297
	<i>References</i>	302
	<i>Index</i>	328
	<i>The plate section is to be found between pages 168 and 169</i>
